**FEDERAL HIGHWAY ADMINISTRATION (FHWA)
FISCAL YEAR 2024 BUDGET**

BUDGET SUMMARY OVERVIEW

The Federal Highway Administration's (FHWA) fiscal year (FY) 2024 Budget represents a third year of generational investments enabled by the Infrastructure Investment and Jobs Act (IIJA), also known as the Bipartisan Infrastructure Law (BIL). This Budget request will continue to supply much-needed transformational resources to our national transportation infrastructure system, enabling us to rethink how safe, reliable, sustainable, and equitable travel can be extended to everyone who uses our Nation's roads and bridges.

FHWA's mission is to deliver a world-class system that advances safe, efficient, equitable, and sustainable mobility choices for all, while strengthening the Nation's economy. FHWA has a critical role to play in addressing the needs of the Nation's transportation infrastructure, including working to eliminate roadway fatalities, addressing the \$1 trillion backlog in repairs and maintenance needed to improve the condition of the more than 619,000 bridges and 4 million miles of public roads, creating an equitable transportation system, and combating climate change. Since the enactment of the IIJA, FHWA has launched over 3,700 bridge repair and replacement projects across the country and has begun the repair of more than 69,000 miles of roadways.

FHWA's FY 2024 Budget requests \$60.8 billion, which when added to the **\$9.5 billion** in advance appropriations contained in the IIJA, will result in a total of **\$70.3 billion** to advance the Secretary of Transportation's vision of building America's economy and infrastructure back better. This request will continue to prioritize safety as the foundation of everything we do, while helping our Nation's economy thrive, rising to the climate challenge, and ensuring transportation equity across all communities.

FHWA will work closely with State Departments of Transportation, local and Tribal governments, and other project sponsors to ensure they have the flexibility and support they need to leverage IIJA formula and grant funds in ways that most benefit their States and communities. Furthermore, FHWA will ensure that the expenditure of these funds meets the Administration's goals of making our Nation's roads and transportation systems safer, sustainable, accessible, and resilient to climate impacts, while enabling all Americans to share in the benefits and maintaining high standards for the use of Federal taxpayer dollars.

In addition, the Budget proposes to repurpose **\$60 million** to make impactful change, particularly in underserved communities, through the **Active Transportation Infrastructure Investment Program (ATIIP)**. The ATIIP was authorized in the IIJA as subject to General Fund appropriation, and the program was funded for the first time in the FY 2023 Consolidated Appropriations Act. To continue this program, the Budget proposes to repurpose \$60 million in unused Transportation Infrastructure Finance and Innovation Act program funding to fund the ATIIP. ATIIP will support communities in identifying, prioritizing, and implementing improvements to the largest barriers to safe, accessible, and equitable pedestrian and bicycle network connectivity.

Focusing on Safety

The safety of all roadway users – drivers and passengers, pedestrians on foot and in wheelchairs, cyclists, and transit passengers as they are going to or from their station or stop – continues to be FHWA’s top priority. The National Highway Traffic Safety Administration (NHTSA) estimates that 31,785 people died in traffic crashes in the first nine months of 2022. This is a slight decrease as compared to the 31,850 estimated fatalities during the same time in 2021. The third quarter of 2022 represents the second straight quarter in which year-over-year fatalities have declined following a period of increases in fatalities that started in the second half of 2020.

FHWA believes that zero is the only acceptable number of deaths on our roads and that a Safe System is how we get there. FHWA will play an important role in implementing the Department of Transportation’s National Roadway Safety Strategy (NRSS), which has formally adopted zero deaths as the DOT-wide vision and emphasizes the Safe System Approach. This approach acknowledges that people make mistakes, and we are responsible for putting safeguards in place to prevent those mistakes from being fatal.

A central component of FHWA’s safety mission is a commitment to Complete Streets. In March 2022, FHWA released a report to Congress detailing the agency’s plan to advance widespread implementation of the Complete Streets design model, which ensures that streets are safe for all users. In the report, “Moving to a Complete Streets Design Model: A Report to Congress on Opportunities and Challenges,” FHWA adopts Complete Streets as its default approach for funding and designing most Federally funded roadways.

The Focused Approach to Safety—an FHWA initiative developed to target focus areas that have been identified as providing the greatest potential to reduce roadway fatalities—provides additional resources to high-priority States to address the Nation’s most critical safety challenges through additional program benefits such as people, time, tools, and training. This approach increases awareness on critical severe crash types, leads to key safety infrastructure improvements, assists in prioritizing limited resources, and creates positive organizational changes in safety culture, policies, and procedures.

As included in USDOT’s FY 2024 Evaluation Plan, FHWA will conduct a program evaluation to determine if delivery of this program is being implemented as intended. Through this assessment, FHWA aims to establish how effective the agency is in the implementation of an aspect of the Safety Program. Among other goals, the assessment will focus on identifying risks in the current and desired future state of the program; establishing strategies to manage those risks; and identifying opportunities to streamline program implementation.

FHWA implements several important programs that focus on reducing traffic fatalities and serious injuries for all roadway users on all public roads.

- FHWA’s **Highway Safety Improvement Program (HSIP) (\$3.1 billion)** seeks to reduce the number of lives lost on our Nation’s highways, bridges, and roads. The HSIP is one of the most important Federal programs for transportation agencies in their efforts to protect all road users. The HSIP anchors FHWA’s safety efforts, providing States with critical safety

funding that is used to save lives and prevent serious injuries on all public roads and for all road users. FHWA will work with States to encourage prioritizing safety-related investments in communities that have been historically underserved and adversely affected by past infrastructure decisions, with a focus on disadvantaged communities including high-poverty and rural areas.

Consistent with the NRSS, FHWA recommends that HSIP funds be used to incorporate a data-driven, holistic, and equitable Safe System Approach to roadway safety that builds in redundancies so if one element of a transportation system fails, other elements provide protection to save lives and prevent serious injuries on our roads.

While the HSIP places a focus on infrastructure safety improvements, States have more flexibility under the IIJA to use up to ten percent of their HSIP funds for “specified safety projects” that include non-infrastructure safety projects. These non-infrastructure safety projects include public awareness campaigns, research, automated traffic enforcement systems, emergency services, and efforts to protect children such as Safe Routes to School activities.

FHWA is focused on enhancing the safety of vulnerable road users, such as pedestrians and bicyclists. FHWA issued guidance that implements the provisions of the IIJA that will help vulnerable road users who are most at risk for being involved in traffic crashes that result in fatalities. To help protect them, the IIJA requires States to conduct Vulnerable Road User assessments (which will be completed by November 2023) and adds a Vulnerable Road User Safety Special Rule to the HSIP that directs funds toward vulnerable road users if triggered based on fatalities data. The new guidance also incorporates legislative changes to permit 100 percent Federal funding for certain pedestrian and bicyclist projects.

- **Transportation Alternatives (\$1.4 billion)**, which is a set-aside from FHWA’s Surface Transportation Block Grant Program, helps States, local governments, and communities pursue transportation improvements that create safe, accessible, and environmentally sensitive communities through projects that provide access to jobs, services, housing, and recreation, and enhance and preserve the human and natural environment. In March 2022, FHWA announced new guidance for this set-aside that can help State and local governments carry out projects that create safer, more walkable streets, including pedestrian and bicycle infrastructure, Safe Routes to School programs, and other local community projects. Through this guidance FHWA encourages State and local agencies and other project sponsors to consider the use of funds from the Transportation Alternatives set-aside to address safety and implement the Safe System Approach wherever possible.
- A key area of emphasis for FHWA is the safety of highway construction workers, who will be doing more work repairing and replacing roads and bridges due to historic funding levels provided in the IIJA. FHWA’s **Work Zone Safety Training grant program (\$1.9 million)** develops and provides highway work zone safety training and guidelines to prevent and reduce work zone injuries and fatalities. Through this program, more than 122,000 field workers comprised of State, local and Tribal personnel have participated in

nearly 4,300 courses.

- The **Railway-Highway Crossing Program (\$245 million)**, which is a set-aside from HSIP, supports projects to reduce the number of fatalities, injuries, and crashes at public railway-highway grade crossings. Through this program, State and local agencies are implementing data-driven practices to successfully address highway-railway crossing safety planning, implementation, and evaluation challenges.
- FHWA's holistic approach to safety considers all aspects of the roadway experience, from drivers, pedestrians, and cyclists, to how the neighboring natural environment impacts roadway safety. For example, the **Wildlife Crossings Pilot Program (\$70 million)** awards grants for projects designed to reduce wildlife-vehicle collisions and improve habitat connectivity. Rural areas, including Tribal communities, experience higher collision rates compared to urbanized areas. These rural areas—where at least 60 percent of the pilot funds must be spent—will benefit from improved traveler safety and reduction in wildlife-vehicle collisions.

Restoring Economic Strength

The IJA is a once-in-a-generation investment in transportation infrastructure. Notably, this includes the largest dedicated investment in bridges since the construction of the Interstate System. Every State has bridges in need of repair, including bridges with weight restrictions that may force lengthy detours for travelers, school buses, first responders, or trucks carrying freight. This historic bridge investment will allow States, local governments, and Tribal governments to repair, replace, and modernize bridges to withstand the effects of climate change and to make them safer for all users, including cyclists and pedestrians.

In May 2022, FHWA announced updates to the National Bridge Inspection Standards (NBIS). This is part of a process to periodically update the NBIS to continue to strengthen safety inspections and oversight processes nationwide. The changes announced will help improve bridge safety by ensuring the uniformity of inspections and evaluations, clarifying responsibilities, and requiring action for higher-risk issues. The revised standards also update the training and qualification requirements for bridge inspectors, establishing a national certification for inspectors, and expanding the regulatory requirements to Tribally owned highway bridges.

FHWA's programs provide funding for nationally and regionally significant infrastructure, such as the National Highway System and Interstate System, while also dedicating funding for community-based projects and off-system roads and bridges. FHWA values the roles of States, local governments, Tribes, and other stakeholders in deciding how to prioritize projects and understands that communities have different needs when it comes to transportation assets. FHWA's programs provide flexible funding for a broad range of eligible projects to help communities repair, rebuild, and modernize their roads and bridges.

- The historic **Bridge Formula Program (\$5.5 billion)** provides funds to States by formula for bridge replacement, rehabilitation, preservation, protection, or construction projects on public roads. Portions of this funding is dedicated to off-system bridges, which are often owned by local authorities, and to Tribal transportation facilities. In January 2022, FHWA

launched the Bridge Formula Program, which will fix thousands of bridges across the country, improving safety, supporting economic growth, and making people’s lives better in every part of the country – across rural, suburban, urban, and Tribal communities.

- The **Bridge Investment Program (\$2.5 billion)** awards grants to rehabilitate or replace bridges. This program focuses on projects with national or regional significance, while setting aside a portion of funding for Tribal bridge projects. In September 2022, the program awarded \$2.1 billion to four large bridge projects in five States: the Golden Gate Bridge in the City of San Francisco; the Gold Star Memorial Bridge, which carries I-95 traffic over the Thames River in Connecticut; the Brent Spence Bridge, which crosses the Ohio River at the Kentucky and Ohio border; and four bascule bridges over the Calumet River on the south side of Chicago. In addition, the program distributed \$20 million in competitive planning grants for 24 projects in 24 States.
- The **Nationally Significant Freight and Highway Projects Program (\$1.6 billion)** supports highway and freight projects of national or regional significance. This program—also referred to as the “Infrastructure for Rebuilding America (INFRA)” program—awards grants for projects that will have a significant effect on the ability of our Nation to meet the growth in freight and passenger demand in a responsible, effective, and safer way. In September 2022, FHWA awarded \$1.5 billion nationwide for 26 highway, multimodal freight and rail projects that will make the Nation's transportation systems safer and more resilient, eliminate supply chain bottlenecks, and improve critical freight movements.
- The **National Highway Freight Program (\$1.4 billion)** invests in infrastructure and operational improvements on the National Highway Freight Network that reduce congestion, improves safety and productivity, and strengthens our Nation’s economy. This program addresses a longstanding need to reduce the existing backlog in freight infrastructure investment.
- Through the **Congestion Relief Program (\$50 million)**, FHWA addresses the negative impacts congestion has on safety, mobility, climate, and quality of life. This program awards competitive grants for projects in large, urbanized areas to advance innovative, integrated, and multimodal solutions to mitigate congestion in the most densely populated metropolitan areas.
- The **National Highway Performance Program (\$29.6 billion)** improves the condition and performance of the National Highway System (NHS), a roughly 220,000-mile network of high-volume roads and over 145,000 bridges. The NHS is a vital, national network of roads. Preserving and improving the NHS through the NHPP keep our Nation’s highways and bridges safe and benefits both urban and rural areas nationwide and strengthens the economy through the efficient movement of freight. The NHPP supports progress toward the achievement of performance targets established in a State’s asset management plan for the NHS, and increases the resiliency of the NHS to mitigate the cost of damages from sea level rise, extreme weather events, flooding, wildfires, or other natural disasters.

As included in USDOT’s FY 2024 Evaluation Plan, FHWA intends to conduct an evaluation of portions of the National Highway Performance Program (NHPP) to assess

certain aspects of program implementation. This multibillion-dollar program provides support for the condition and performance of the National Highway System (NHS) and for the construction of new facilities on the NHS. It also ensures that investments of Federal-aid funds in highway construction are directed to support progress toward the achievement of performance targets established in States' asset management plans for the NHS. While the NHPP contains multiple program areas, FHWA's evaluation will specifically focus on implementation of 23 U.S.C. 119(e) – State Performance Management. The assessment will measure the efficiency, effectiveness, and compliance in the implementation of State Performance Management by identifying risks in the current, or desired future state of the program, as well as establishing strategies to successfully manage these risks and streamline program delivery.

- The **Surface Transportation Block Grant Program (STBG) (\$14.4 billion)** provides flexible funding that States and localities can use to best address State and local transportation needs and increases mobility and access to community resources and improves quality of life for all communities. Under the IIJA, ten percent of STBG funds are set aside for Transportation Alternatives, which funds a variety of smaller-scale transportation projects such as pedestrian and bicycle facilities, recreational trails, Safe Routes to School projects, and other community improvements.
- The **Appalachian Development Highway System (ADHS) (\$250 million)** supports economic growth in this historically isolated region. The construction of the ADHS has increased economic activity, job creation, and business expansion across the region. This investment will help meet the goal of completing 100 percent of the network by 2040.
- The **Territorial and Puerto Rico Highway Programs (\$228 million)** increase safety and mobility, improves transportation equity, and brings about economic growth benefits by funding the construction of critical transportation infrastructure in Puerto Rico and the territories of American Samoa, the Commonwealth of the Northern Mariana Islands, Guam, and the United States Virgin Islands.

Ensuring Transportation Equity

The Department of Transportation is committed to pursuing a comprehensive approach to advancing equity for all. In response to Executive Order 13985: Advancing Racial Equity and Support for Underserved Communities Through the Federal Government, DOT developed an Equity Action Plan to highlight key actions that DOT will undertake to expand access and opportunity to all communities while focusing on underserved, overburdened, and disadvantaged communities. In line with the Equity Action Plan, FHWA is committed to building a better, more equitable transportation system.

FHWA administers several programs that proactively address racial equity, workforce development, economic development, and removing barriers to opportunity.

- The **Disadvantaged Business Enterprise/Supportive Services (DBE/SS) program (\$10 million)** helps eligible small businesses compete for Federal highway contracts in States, as well as the District of Columbia, Puerto Rico and the U.S. Virgin Islands.

These funds allow State DOTs to help minority- and women-owned businesses across the country create jobs and better compete for resources for transportation projects nationwide. FHWA has promoted the participation of DBEs in Federal-aid highway contracts through State-managed programs since 1982. The DBE/SS program is an ongoing effort to help State DOTs train certified DBE firms on a wide array of business management practices and improve their ability to compete for federally assisted contracts as prime and subcontractors.

- The history of our transportation system has far too many examples of highways built through disadvantaged communities, effectively separating these communities. In September 2022, FHWA issued a Notice of Funding Opportunity for the **Reconnecting Communities Pilot Program (\$200 million)** to fund planning efforts and projects with the goal of removing or retrofitting existing transportation facilities that create barriers within communities. In February 2023, DOT announced a historic \$185 million in grant awards for 45 construction and planning projects that prioritize transformative community-led solutions to help revitalize communities and provide access to jobs, while reducing pollution. In this first round of funding for the Reconnecting Communities Program, FHWA is awarding 39 planning grants and six capital construction grants.
- Equitable transportation begins with planning. The **Prioritization Process Pilot Program (\$10 million)** focuses on equity, transparency, and accessibility in transportation planning. This program awards grants to States and (metropolitan planning organizations) MPOs to fund the development of publicly accessible, transparent prioritization processes to assess and score projects according to locally determined priorities, and to use such evaluations to inform the selection of projects to include in transportation plans.
- The **Metropolitan Planning Program (\$456 million)** supports MPOs in conducting multimodal transportation planning and programming in metropolitan areas. This program helps MPOs direct investments toward improving transportation system outcomes in a safe, transparent, equitable, and accountable manner while engaging the public, elected officials, and other stakeholders in the process.
- The **Rural Surface Transportation Grant Program (\$400 million)** awards competitive grants to eligible entities to improve and expand the surface transportation infrastructure in rural areas. At least 25 percent of funds are reserved for projects that further the completion of designated routes of the ADHS. In December 2022, FHWA awarded \$273.9 million to help communities around the United States complete transportation projects that will increase connectivity, improve safety and reliability, support regional economic growth, and improve the quality of life for people living in rural areas.
- One important equity strategy is investing in the road and bridge infrastructure that serves Federal lands and Tribal nations such as the **Federal Lands Transportation and Access Programs** and **Tribal Transportation Program**. Investments in Federal lands help ensure that they are accessible to all Americans; investments in Tribal nations improve roadway safety and create access to opportunity.

- The **Federal Lands Transportation and Access Programs (\$736 million)** support projects in and around Federal Lands. The Federal government owns approximately 30 percent of the land in the United States. These programs are vital in keeping these national treasures safely accessible for millions of visitors and help grow local economies that are often in rural areas.
- The **Tribal Transportation Program (\$602 million)** provides safer and better access to housing, emergency services, schools, stores, jobs, and medical services. The Native American and Alaska Native populations of our country experience higher rates of fatal injuries associated with transportation than does the population as a whole. This program supports projects that will make transportation in these communities safer, more accessible, and more efficient.
- The **Nationally Significant Federal Lands and Tribal Projects (NSFLTP) Program (\$55 million)** provides needed funds for Tribes and Federal lands management agencies to complete projects that will provide substantial benefits to their communities or parklands.
- The **On-the-Job Training (OJT) Supportive Services program (\$10 million)** supports the highway construction industry in establishing and maintaining apprenticeship and training programs intended to move minorities, women, and disadvantaged individuals into journey-level positions.

FHWA aims to expand and diversify the workforce that builds Federally funded highway projects. The **Construction Workforce Partnerships (HCWP)** program, which is funded from the OJT program, is central to this goal. The HCWP strives to increase the capacity and capability of the highway construction workforce by partnering with key organizations to develop and deploy highway construction training and placement programs. FHWA will assess the number of training and placement programs developed and/or implemented and, ultimately, the number of individuals enrolled in and/or completing highway construction skill development/training programs, including the number of women, minorities, and disadvantaged individuals.

Addressing Climate Change

FHWA has a key role to play in attaining the Administration's goal of cutting emissions in half by 2030. An important step towards achieving this goal is through the construction of a robust and reliable nationwide electric vehicle (EV) charging network. To this end, the Administration has set an ambitious target of installing 500,000 new EV chargers by 2030 to support inter-city, regional, and national travel, build consumer confidence by addressing driver range anxiety, and accelerate awareness of and public interest in the use of EVs. Together with the Joint Office of Energy and Transportation—a collaborative teaming of the Departments of Energy and Transportation—FHWA will work towards significantly reducing transportation emissions by supporting both electrification and decarbonization of the transportation system.

One of the primary obstacles to more widespread adoption of EVs is the limited network of EV charging stations, including along highway corridors throughout the National Highway System

(NHS). With the designation of Alternative Fuel Corridors (AFC), FHWA is establishing a national network of alternative fueling and charging infrastructure along NHS corridors. This national network will accelerate equitable adoption of EVs, including for those who cannot reliably charge at home, and reduce transportation-related greenhouse gas emissions, helping to put the U.S. on a path to net-zero emissions by no later than 2050. FHWA has designated EV corridors in all 50 States, the District of Columbia, and Puerto Rico. The designation of AFCs will accelerate deployment of an EV charging network that covers every part of our country.

FHWA recognizes that our transportation system must adapt to be more resilient in the face of natural disasters and changing climate conditions. New programs authorized in the IIJA support projects that make our roads and bridges more resilient thereby helping to safeguard communities against extreme events. Through existing and new programs, FHWA will help to fight climate change while making our roads and bridges more resilient to disasters and changing climate conditions.

- The **National Electric Vehicle Infrastructure (NEVI) Formula Program (\$1.0 billion)** enables States to create a network of convenient, affordable, reliable, and equitable EV charging stations along designated AFCs, particularly along the Interstate Highway System. As of September 2022, all 50 States, the District of Columbia and Puerto Rico have approved Electric Vehicle Infrastructure Deployment Plans, and now have access to NEVI Formula Program funding to help build a network of electric vehicle chargers nationwide covering approximately 75,000 miles.
- The **Charging and Fueling Infrastructure Grants Program (\$500 million)** awards competitive grants designed to further increase electric vehicle charging access in locations throughout the country, including in rural and underserved communities. Fifty percent of this funding must be used for a community grant program where priority is given to projects that expand access to electric vehicle charging and alternative fueling infrastructure within rural areas, low- and moderate-income neighborhoods, and communities with a low ratio of private parking spaces.
- The **Promoting Resilient Operations for Transformative, Efficient, and Cost-saving Transportation (PROTECT) Formula Program (\$1.5 billion)** apportions funding to States for resilience improvements, including projects that use materials, structural techniques, or non-structural techniques to prepare more of the Nation’s infrastructure for the impacts of climate change and extreme weather events.
- The **PROTECT discretionary program (\$300 million)** awards competitive grants for activities that enable communities to address vulnerabilities to current and future weather events, natural disasters, and changing conditions, including sea level rise, and plan transportation improvements and emergency response strategies to address those vulnerabilities. This program, along with the PROTECT Formula Program, are first-of-its-kind programs designed to help States and communities better prepare for and respond to extreme weather events like wildfires, flooding, and extreme heat.
- The **Carbon Reduction Program (\$1.3 billion)** provides formula grants to States to fund a wide range of projects designed to reduce carbon dioxide emissions from on-road highway

sources reduce transportation emissions. Eligible projects range from installing infrastructure to support the electrification of freight vehicles or personal cars, to constructing Bus Rapid Transit corridors, to facilitating micro-mobility and biking. The program also requires States to develop a carbon reduction strategy that supports efforts to reduce transportation emissions within two years of enactment and those plans. After submission and review by FHWA, these plans will help inform spending under the Carbon Reduction Program beginning in FY 2024.

- The **Reduction of Truck Emissions at Port Facilities (\$80 million)** funds competitive grants for eligible projects that reduce port-related emissions from idling trucks, including through the advancement of port electrification, improvements in efficiency, and other emerging technologies and strategies.
- The **Congestion Mitigation and Air Quality Improvement Program (\$2.6 billion)** supports transportation investments that reduce highway congestion and harmful emissions. The Congestion Mitigation and Air Quality Improvement Program enhances quality of life and improves health nationwide through its contributions to attainment and maintenance of the National Ambient Air Quality Standards that act as a public health benchmark for many of the densely populated areas of the country.
- The **Emergency Relief Program (\$100 million)** helps restore and repair roads and bridges following disasters or catastrophic failures. Natural disasters and catastrophes that destroy highways and bridges are unpredictable events and can occur anywhere in the country. This program is critical to maintaining mobility and safety following a disaster. The IJA expands the program's focus on making the replaced infrastructure more resilient in the future.

Investing in Transforming Transportation

FHWA is a worldwide leader in sponsoring, sustaining, and guiding highway research. FHWA conducts advanced and applied research, coordinates and collaborates with other research organizations, both nationally and internationally, to leverage knowledge, and develops and delivers solutions to address highway transportation needs. FHWA is uniquely positioned to identify and address highway issues of national significance and build effective partnerships that leverage and maximize the value of the Federal investment in highway research and technology.

The primary goal of FHWA's research programs is to deliver research and development addressing critical knowledge gaps that are not effectively addressed by other highway research sponsors and to accelerate implementation of technologies to meet current and future highway transportation needs.

- FHWA's **Research, Technology, and Education (RT&E) Program (\$519 million)** strives to generate new solutions, build more effective partnerships, and provide better information and tools for decision-making, which will enable our Nation to enhance and make the best investments in the transportation system.

The entire innovation life cycle is covered under the RT&E program umbrella—including

agenda setting; research and development; technology testing and evaluation; and deployment and impact evaluation of market-ready technologies and innovations.

Additionally, the RT&E program is committed to providing superior training and education to transportation professionals. Through several programs, FHWA provides resources for the development and delivery of technical assistance, training, professional development, and education programs to improve the professional capacity of the workforce.

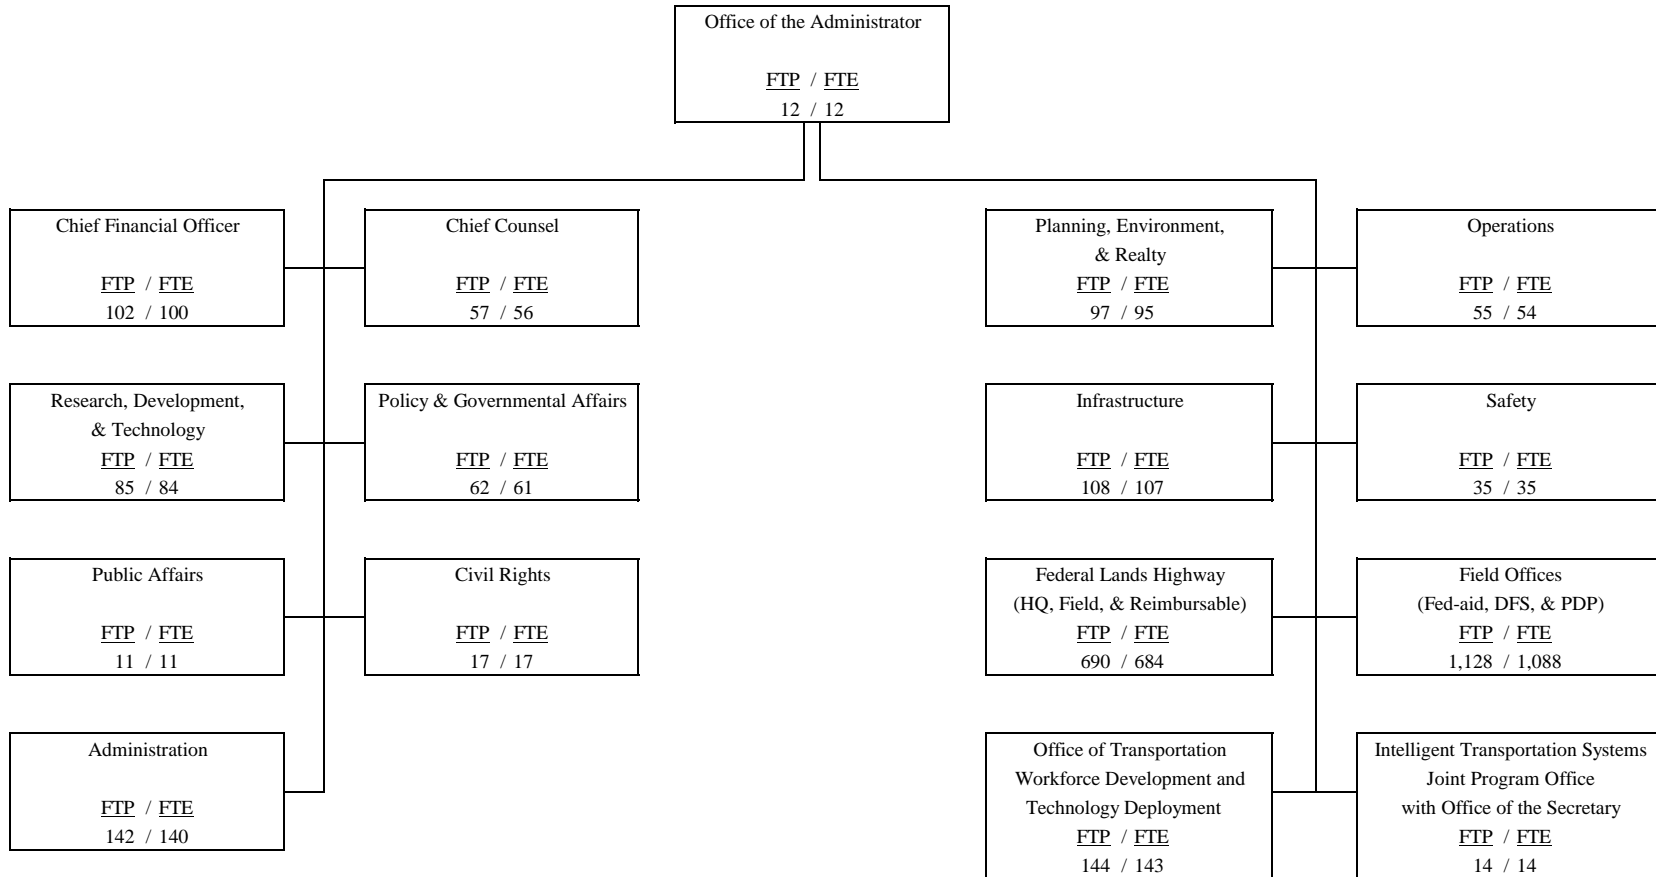

- FHWA’s ability to lead research innovation is exemplified by the **Exploratory Advanced Research (EAR) Program**, which conducts longer-term, higher-risk research. These research products have the potential for dramatic breakthroughs in transportation. For example, the EAR Program is exploring the development of artificial intelligence and machine learning technology within the surface transportation sector. The use of artificial intelligence and machine learning, enabling computers to digest and analyze large amounts of data and form conclusions, can provide broad public benefits. In FY 2024, the EAR Program will focus on open modeling frameworks that can increase the sustainability and resilience of our Nation’s highway system and edge sensing, computing, and control systems that can improve the safety and mobility of vulnerable road users and underserved communities.
- In August 2022, FHWA awarded \$45 million for 10 innovative technology grants to improve mobility and multimodal connections for millions of Americans who travel on our Nation’s highway and transit systems. These grants, which are part of the **Advanced Transportation Technologies and Innovative Mobility Deployment Program** (formerly the Advanced Transportation and Congestion Management Technologies Deployment Program), promote innovations that help expand access to transportation for communities in rural areas and cities alike, improve connectivity, and prepare America’s transportation systems for the future. The program uses advanced technologies and innovation to promote safety for drivers and transit riders and funds projects across the Nation that others can learn from as national models.
- FHWA’s **Every Day Counts (EDC)** is a proven, State-based model that works with State DOT partners to identify, promote and rapidly deploy proven, yet underutilized, innovations that facilitate greater efficiency at the State, local, and Tribal levels, saving time, money and resources. In December 2022, FHWA announced the latest, seventh round of transportation innovations through the EDC. EDC-7 innovations will prioritize improving safety for all road users, building a sustainable infrastructure for the future, and growing an inclusive workforce.

As part of the White House’s Action Plan for Accelerating Infrastructure, the Department of Transportation recently committed to expanding the EDC model to more modes of transportation. The new round of innovations is being promoted by FHWA and the Federal Transit Administration and will improve project delivery across highway, rail, and transit agencies at the State and local level.

EXHIBIT I-A

**FEDERAL HIGHWAY ADMINISTRATION ORGANIZATION CHART
FY 2023 ESTIMATED FTP BY OFFICE AND ESTIMATED FTE BY OFFICE**

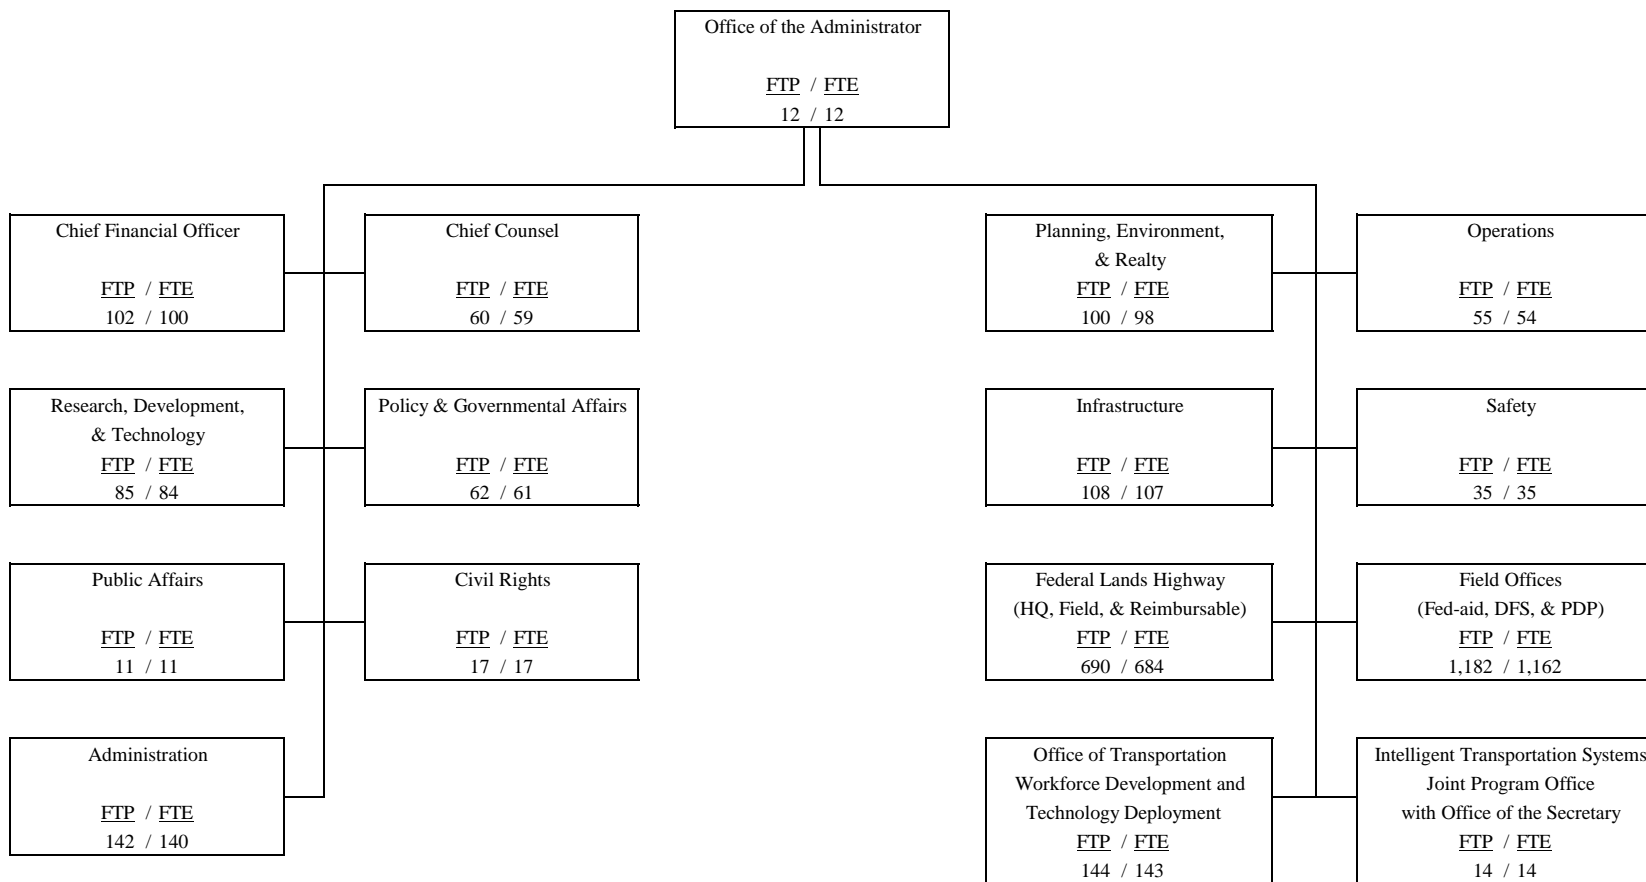

FTP - FULL-TIME PERMANENT POSITIONS	
Direct funded	2,695
Indirect funded	64
Total	2,759

FTE - FULL-TIME EQUIVALENTS	
Direct funded	2,637
Indirect funded	64
Total	2,701

Direct funded FTP presented by office reflects an estimated on-board level at fiscal year end, not total positions including vacancies. This is consistent with Exhibit II-8. Direct funded FTE presented by office reflects an illustrative proration of total FTE. Indirect funded FTP & FTE include Federal Lands Highway reimbursable FTE and allocation FTE from OST. The FTP and FTE levels include estimated increases to properly execute the increased amount of programs and funding in the IJA. FTP/FTE numbers and their allocation among FHWA offices is to be determined, with the amounts shown above being illustrative.

EXHIBIT I-B

**FEDERAL HIGHWAY ADMINISTRATION ORGANIZATION CHART
FY 2024 ESTIMATED FTP BY OFFICE AND ESTIMATED FTE BY OFFICE**

FTP - FULL-TIME PERMANENT POSITIONS	
Direct funded	2,755
Indirect funded	64
Total	2,819

FTE - FULL-TIME EQUIVALENTS	
Direct funded	2,717
Indirect funded	64
Total	2,781

Direct funded FTP presented by office reflects an estimated on-board level at fiscal year end, not total positions including vacancies. This is consistent with Exhibit II-8. Direct funded FTE presented by office reflects an illustrative proration of total FTE. Indirect funded FTP & FTE include Federal Lands Highway reimbursable FTE and allocation FTE from OST. The FTP and FTE levels include estimated increases to properly execute the increased amount of programs and funding in the IJA. FTP/FTE numbers and their allocation among FHWA offices is to be determined, with the amounts shown above being illustrative.

[] Non-add

1/ All fiscal years include FHWA General Operating Expenses (GOE) and transfers to the Appalachian Regional Commission (ARC) for administrative activities associated with the Appalachian Development Highway System. All fiscal years do not include amounts for other non-administrative programs authorized under Administrative Expenses.

2/ The Active Transportation Infrastructure Investment Program (ATIIP) is authorized in the IJA as subject to General Fund appropriation. The Budget proposes to repurpose \$60 million in unobligated balances of Transportation Infrastructure Finance and Innovation Act program funding to fund the ATIIP.

3/ In all years, the exempt contract authority is comprised of \$639 million for the National Highway Performance Program and \$100 million for the Emergency Relief Program.

4/ FHWA anticipates a transfer to NHTSA in FY 2024 in an amount to be determined based on State penalty information.

5/ FHWA does not anticipate net transfers of new contract authority in FY 2023 and FY 2024, but does anticipate net transfers of carryover contract authority to be determined based on TIFIA loan activity.

6/ FY 2022 reflects sequestration of 5.7 percent of contract authority exempt from obligation limitation per Sequestration Order dated May 28, 2021. FY 2023 reflects sequestration of 5.7 percent of contract authority exempt from obligation limitation per Sequestration Order dated March 28, 2022. FY 2024 reflects sequestration of 5.7 percent of contract authority exempt from obligation limitation pursuant to 2 U.S.C. 901a(6)(B)(ii).

7/ The Department of Transportation Appropriations Act, 2022 (Public Law 117-103) provided \$2.4 billion in additional highway funding from the General Fund in FY 2022. The Department of Transportation Appropriations Act, 2023 (Public Law 117-328) provided \$3.4 billion in additional highway funding from the General Fund in FY 2023.

8/ The Inflation Reduction Act of 2022 (Public Law 117-169) provided \$5.3 billion in additional highway funding from the General Fund in FY 2022.

9/ The Disaster Relief Supplemental Appropriations Act, 2022 (Public Law 117-43) provided \$2.6 billion in additional emergency relief funding from the General Fund for FY 2022. The Consolidated Appropriations Act, 2023 (Public Law 117-328) provided \$803 million in additional emergency relief funding from the General Fund for FY 2023.

10/ Cancellations of unobligated balances proposed in the FY 2024 Budget.

11/ Exhibit does not reflect transfers of carryover contract authority transferred to FTA.

12/ The IJA provided funding for administrative expenses as a takedown from the Highway Infrastructure Programs. Amounts shown reflect the aggregate of such takedowns.

Safety: Make our transportation system safer for all people. Advance a future without transportation-related serious injuries and fatalities.							
Economic Strength and Global Competitiveness: Grow an inclusive and sustainable economy. Invest in our transportation system to provide American workers and businesses reliable and efficient access to resources, markets, and good-paying jobs.							
Equity: Reduce inequities across our transportation systems and the communities they affect. Support and engage people and communities to promote safe, affordable, accessible, and multimodal access to opportunities and services while reducing transportation-related disparities, adverse community impacts, and health effects.							
Climate and Sustainability: Tackle the climate crisis by ensuring that transportation plays a central role in the solution. Substantially reduce greenhouse gas emissions and transportation-related pollution and build more resilient and sustainable transportation systems to benefit and protect communities.							
Transformation: Design for the future. Invest in purpose-driven research and innovation to meet the challenge of the present and modernize a transportation system of the future that serves everyone today and in the decades to come.							
Organizational Excellence: Strengthen our world class organization. Advance the Department's mission by establishing policies, processes, and an inclusive and innovative culture to effectively serve communities and responsibly steward the public's resources.							
*The amounts in this table reflect an illustrative distribution among the Strategic Goals. In most cases, activities funded through these programs will overlap with more than one of the Strategic Goals, as they are not mutually exclusive.

1/ The FTE shown in this exhibit are funded by General Operating Expenses and exclude additional FTEs funded by reimbursements, allocations from RAISE Grants, and other programs (primarily Federal Lands Highways).

2/ The "Other" category depicts illustrative reductions in order to reflect the full utilization of administrative resources subject to the limitation on administrative expenses which expires after one year. Administrative expenses funding from IJA supplemental advance appropriations (multi-year and available until expended funding) will be used to fully fund the administrative resources required to support the implementation and administration of the IJA.

1/ The IJA provides funding for administrative expenses as takedowns from the Highway Infrastructure Programs (HIP). The HIP administrative expenses funding will be used for information technology investments, contractual services, and other investments and services to support the implementation and administration of the IJA on a to-be-determined basis. This table is an illustrative example of how HIP administrative expenses funding may be utilized.

2/ In FY2022, the IJA provided \$86.8 million in administrative expenses. Amounts not obligated in FY 2022 will be carried forward for obligation in a future fiscal year.

1/ The FTE shown in this exhibit are funded by General Operating Expenses and exclude additional FTEs funded by reimbursements, allocations from RAISE Grants, and other programs (primarily Federal Lands Highways).

2/ The "Other" category depicts illustrative reductions in order to reflect the full utilization of administrative resources subject to the limitation on administrative expenses which expires after one year. Administrative expenses funding from IJA supplemental appropriations (multi-year and available until expended funding) will be used to fully fund the administrative resources required to support the implementation and administrative of the IJA.

3/ The IJA provides funding for administrative expenses as takedowns from the Highway Infrastructure Programs (HIP). The HIP administrative expenses funding will be used for information technology investments, contractual services, and other investments and services to support the implementation and administration of the IJA on a to-be-determined basis.

4/ The Active Transportation Infrastructure Investment Program (ATIIP) is authorized in the IJA as subject to General Fund appropriation. The Budget proposes to repurpose \$60 million in unobligated balances of Transportation Infrastructure Finance and Innovation Act program funding and associated obligation limitation to fund the ATIIP.

5/ In all years, the exempt contract authority is comprised of \$639 million for the National Highway Performance Program and \$100 million for the Emergency Relief Program.

6/ FY 2022 reflects sequestration of 5.7 percent of contract authority exempt from obligation limitation per Sequestration Order dated May 28, 2021. FY 2023 reflects sequestration of 5.7 percent of contract authority exempt from obligation limitation per Sequestration Order dated March 28, 2022. FY 2024 reflects sequestration of 5.7 percent of contract authority exempt from obligation limitation pursuant to 2 U.S.C. 901a(6)(B)(ii).

7/ The Department of Transportation Appropriations Act, 2022 (Public Law 117-103) provided \$2.4 billion in additional highway funding from the General Fund in FY 2022.

8/ The Department of Transportation Appropriations Act, 2023 (Public Law 117-328) provided \$3.4 billion in additional highway funding from the General Fund in FY 2023.

9/ The Inflation Reduction Act of 2022 (Public Law 117-169) provided \$5.3 billion in additional highway funding from the General Fund in FY 2022.

10/ The Disaster Relief Supplemental Appropriations Act, 2022 (Public Law 117-43) provided \$2.6 billion in additional emergency relief funding from the General Fund for FY 2022. The Consolidated Appropriations Act, 2023 (Public Law 117-328) provided \$803 million in additional emergency relief funding from the General Fund for FY 2023.

FEDERAL HIGHWAY ADMINISTRATION
LIMITATION ON ADMINISTRATIVE EXPENSES

(HIGHWAY TRUST FUND)

(INCLUDING TRANSFER OF FUNDS)

Not to exceed [~~\$473,535,991~~~~\$483,551,671~~] together with advances and reimbursements received by the Federal Highway Administration, shall be obligated for necessary expenses for administration and operation of the Federal Highway Administration: *Provided*, That in addition, \$3,248,000 shall be transferred to the Appalachian Regional Commission in accordance with section 104(a) of title 23, United States Code.

FEDERAL-AID HIGHWAYS

(LIMITATION ON OBLIGATIONS)

(HIGHWAY TRUST FUND)

Funds available for the implementation or execution of authorized Federal-aid highway and highway safety construction programs shall not exceed total obligations of [~~\$58,764,510,674~~]~~\$60,095,782,888~~ for fiscal year [~~2023~~]~~2024~~. *Provided*, That the limitation on obligations under this heading shall only apply to contract authority authorized from the Highway Trust Fund (other than the Mass Transit Account), unless otherwise specified in law.

(LIQUIDATION OF CONTRACT AUTHORIZATION)

(HIGHWAY TRUST FUND)

For the payment of obligations incurred in carrying out authorized Federal-aid highway and highway safety construction programs, [~~\$59,503,510,674~~]~~\$60,792,659,888~~ shall be derived from the Highway Trust Fund (other than the Mass Transit Account), to remain available until expended.

[HIGHWAY INFRASTRUCTURE PROGRAMS

(INCLUDING TRANSFER OF FUNDS)

There is hereby appropriated to the Secretary \$3,417,811,613: *Provided*, That the funds made available under this heading shall be derived from the general fund, shall be in addition to any funds provided for fiscal year 2023 in this or any other Act for: (1) "Federal-aid Highways" under chapter 1 of title 23, United States Code; (2) the Appalachian Development Highway System as authorized under section 1069(y) of Public Law 102-240; (3) the nationally significant Federal lands and Tribal projects program under section 1123 of the FAST Act, as amended (23 U.S.C. 201 note); (4) the Northern Border Regional Commission (40 U.S.C. 15101 et seq.); or (5) the Denali Commission, and shall not affect the distribution or amount of funds provided in any other Act: *Provided further*, That, except for funds made available under this heading for the Northern Border Regional Commission and the Denali Commission, section 11101(e) of Public Law 117-58 shall apply to funds made available under this heading: *Provided further*, That unless otherwise specified, amounts made available under this heading shall be available until September 30, 2026, and shall not be subject to any limitation on obligations for Federal-aid highways or highway safety construction programs set forth in any Act making annual appropriations: *Provided further*, That of the sums appropriated under this heading—

(1) \$1,862,811,613 shall be for the purposes, and in the amounts, specified for Community Project Funding/Congressionally Directed Spending in the table entitled "Community Project Funding/Congressionally Directed Spending" included in the explanatory statement described in section 4 (in the matter preceding division A of this consolidated Act): *Provided*, That, except as otherwise provided under this heading, the funds made available under this paragraph shall be administered as if apportioned under chapter 1 of title 23, United States Code: *Provided further*, That funds made available under this paragraph that are used for Tribal projects shall be administered as if allocated under chapter 2 of title 23, United States Code, except that the set-asides described in subparagraph (C) of section 202(b)(3) of title 23, United States Code, and subsections (a)(6), (c), and (e) of section 202 of such title, and section 1123(h)(1) of MAP-21 (as amended by Public Law 117-58), shall not apply to such funds;

(2) \$100,000,000 shall be for necessary expenses for construction of the Appalachian Development Highway System, as authorized under section 1069(y) of Public Law 102-240: *Provided*, That for the purposes of funds made available under this paragraph, the term "Appalachian State" means a State that contains 1 or more counties (including any political subdivision located within the area) in the Appalachian region as defined in section 14102(a) of title 40, United States Code: *Provided further*, That funds made available under this heading for construction of the Appalachian Development Highway System shall remain available until expended: *Provided further*, That, except as provided in the

following proviso, funds made available under this heading for construction of the Appalachian Development Highway System shall be administered as if apportioned under chapter 1 of title 23, United States Code: *Provided further*, That a project carried out with funds made available under this heading for construction of the Appalachian Development Highway System shall be carried out in the same manner as a project under section 14501 of title 40, United States Code: *Provided further*, That subject to the following proviso, funds made available under this heading for construction of the Appalachian Development Highway System shall be apportioned to Appalachian States according to the percentages derived from the 2012 Appalachian Development Highway System Cost-to-Complete Estimate, adopted in Appalachian Regional Commission Resolution Number 736, and confirmed as each Appalachian State's relative share of the estimated remaining need to complete the Appalachian Development Highway System, adjusted to exclude those corridors that such States have no current plans to complete, as reported in the 2013 Appalachian Development Highway System Completion Report, unless those States have modified and assigned a higher priority for completion of an Appalachian Development Highway System corridor, as reported in the 2020 Appalachian Development Highway System Future Outlook: *Provided further*, That the Secretary shall adjust apportionments made under the preceding proviso so that no Appalachian State shall be apportioned an amount in excess of 30 percent of the amount made available for construction of the Appalachian Development Highway System under this heading: *Provided further*, That the Secretary shall consult with the Appalachian Regional Commission in making adjustments under the preceding two provisos: *Provided further*, That the Federal share of the costs for which an expenditure is made for construction of the Appalachian Development Highway System under this heading shall be up to 100 percent;

(3) \$40,000,000 shall be for the nationally significant Federal lands and Tribal projects program under section 1123 of the FAST Act (23 U.S.C. 201 note), of which not less than \$20,000,000 shall be for competitive grants to tribal governments;

(4) \$12,000,000 shall be for the regional infrastructure accelerator demonstration program authorized under section 1441 of the FAST Act (23 U.S.C. 601 note): *Provided*, That for funds made available under this paragraph, the Federal share of the costs shall be, at the option of the recipient, up to 100 percent;

(5) \$20,000,000 shall be for the national scenic byways program under section 162 of title 23, United States Code: *Provided*, That, except as otherwise provided under this heading, the funds made available under this paragraph shall be administered as if apportioned under chapter 1 of title 23, United States Code;

(6) \$45,000,000 shall be for the active transportation infrastructure investment program under section 11529 of the Infrastructure Investment and

Jobs Act (23 U.S.C. 217 note): *Provided*, That except as otherwise provided under such section or this heading, the funds made available under this paragraph shall be administered as if apportioned under chapter 1 of title 23, United States Code: *Provided further*, That funds made available under this paragraph shall remain available until expended;

(7) \$3,000,000 shall be to carry out the Pollinator-Friendly Practices on Roadsides and Highway Rights-of-Way Program under section 332 of title 23, United States Code;

(8) \$5,000,000 shall be for a cooperative series of agreements with universities, Federal agencies, the National Academy of Sciences, transportation agencies, or nonprofit organizations, to examine the impacts of culverts, roads, and bridges on threatened or endangered salmon populations: *Provided*, That, for funds made available under this paragraph, the Federal share of the costs of an activity carried out with such funds shall be 80 percent: *Provided further*, That, except as otherwise provided under this heading, the funds made available under this paragraph shall be administered as if authorized under chapter 5 of title 23, United States Code;

(9) \$1,145,000,000 shall be for a bridge replacement and rehabilitation program: *Provided*, That, for the purposes of funds made available under this paragraph, the term "State" means any of the 50 States or the District of Columbia and the term "qualifying State" means any State in which the percentage of total deck area of bridges classified as in poor condition in such State is at least 5 percent or in which the percentage of total bridges classified as in poor condition in such State is at least 5 percent: *Provided further*, That, of the funds made available under this paragraph, the Secretary shall reserve \$6,000,000 for each State that does not meet the definition of a qualifying State: *Provided further*, That, after making the reservations under the preceding proviso, the Secretary shall distribute the remaining funds made available under this paragraph to each qualifying State by the proportion that the percentage of total deck area of bridges classified as in poor condition in such qualifying State bears to the sum of the percentages of total deck area of bridges classified as in poor condition in all qualifying States: *Provided further*, That, of the funds made available under this paragraph—

(A) no qualifying State shall receive more than \$60,000,000;

(B) each State shall receive an amount not less than \$6,000,000;
and

(C) after calculating the distribution of funds pursuant to the preceding proviso, any amount in excess of \$60,000,000 shall be redistributed equally among each State that does not meet the definition of a qualifying State:

Provided further, That the funds made available under this paragraph shall be used for highway bridge replacement or rehabilitation projects on public roads: *Provided further*, That for purposes of this paragraph, the Secretary shall calculate the percentages of total deck area of bridges (including the percentages of total deck area classified as in poor condition) and the percentages of total bridge counts (including the percentages of total bridges classified as in poor condition) based on the National Bridge Inventory as of December 31, 2018: *Provided further*, That, except as otherwise provided under this heading, the funds made available under this paragraph shall be administered as if apportioned under chapter 1 of title 23, United States Code;

(10) \$15,000,000 shall be transferred to the Northern Border Regional Commission (40 U.S.C. 15101 et seq.) to make grants, in addition to amounts otherwise made available to the Northern Border Regional Commission for such purpose, to carry out pilot projects that demonstrate the capabilities of wood-based infrastructure projects: *Provided*, That a grant made with funds made available under this paragraph shall be administered in the same manner as a grant made under subtitle V of title 40, United States Code;

(11) \$150,000,000 shall be for competitive awards for activities eligible under section 176(d)(4) of title 23, United States Code, of which \$125,000,000 shall be for such activities eligible under subparagraph (A) of such section, and of which \$25,000,000 shall be for such activities eligible under subparagraph (C) of such section: *Provided*, That, except as otherwise provided under this heading, the funds made available under this paragraph shall be administered as if apportioned under chapter 1 of title 23, United States Code: *Provided further*, That, except as otherwise provided under this heading, funds made available under this paragraph shall be administered as if made available to carry out section 176(d) of such title: *Provided further*, That, for purposes of the calculation under section 176(d)(5)(G)(ii) of such title, amounts made available under this paragraph shall be included in the calculation of the total amount provided for fiscal year 2023 under section 176(d) of such title: *Provided further*, That for purposes of applying the set-asides under section 176(d)(5)(H)(ii) and (iii) of such title, amounts made available under this paragraph for competitive awards for activities eligible under sections 176(d)(4)(A) and 176(d)(4)(C) of such title shall be included in the calculation of the amounts made available to carry out section 176(d) of such title for fiscal year 2023: *Provided further*, That, the Secretary may retain not more than a total of 5 percent of the amounts made available under this paragraph to carry out this paragraph and to review applications for grants under this paragraph, and may transfer portions of the funds retained under this proviso to the relevant Administrators to fund the award and oversight of grants provided under this paragraph: *Provided further*, That a project assisted with funds made available under this paragraph shall be treated as a project on a Federal-aid highway;

(12) \$5,000,000 shall be transferred to the Denali Commission for activities eligible under section 307(e) of the Denali Commission Act of 1998 (42 U.S.C. 3121 note; Public Law 105-277): *Provided*, That funds made available under this paragraph shall not be subject to section 311 of such Act: *Provided further*, That except as otherwise provided under section 307(e) of such Act or this heading, funds made available under this paragraph shall be administered as if directly appropriated to the Denali Commission and subject to applicable provisions of such Act, including the requirement in section 307(e) of such Act that the local community provides a 10 percent non-Federal match in the form of any necessary land or planning and design funds: *Provided further*, That such funds shall be available until expended: *Provided further*, That the Federal share of the costs for which an expenditure is made with funds transferred under this paragraph shall be up to 90 percent; and

(13) \$15,000,000 shall be transferred to the Denali Commission to carry out the Denali Access System Program under section 309 of the Denali Commission Act of 1998 (42 U.S.C. 3121 note; Public Law 105-277): *Provided*, That a transfer under this paragraph shall not be subject to section 311 of such Act: *Provided further*, That except as otherwise provided under this heading, funds made available under this paragraph shall be administered as if directly appropriated to the Denali Commission and subject to applicable provisions of such Act: *Provided further*, That funds made available under this paragraph shall not be subject to section 309(j)(2) of such Act: *Provided further*, That funds made available under this paragraph shall be available until expended: *Provided further*, That the Federal share of the costs for which an expenditure is made with funds transferred under this paragraph shall be up to 100 percent.]

(Department of Transportation Appropriations Act, 2023.)

Reason for excluding the Highway Infrastructure Programs: Funding for fiscal year 2024 was provided in the Infrastructure Investment and Jobs Act as advance appropriations. The FY 2024 Budget does not request additional funding for the program beyond amounts appropriated in the Infrastructure Investment and Jobs Act.

[EMERGENCY RELIEF PROGRAM

For an additional amount for the "Emergency Relief Program" as authorized under section 125 of title 23, United States Code, \$803,000,000, to remain available until expended: *Provided*, That notwithstanding subsection (e) of section 120 of title 23, United States Code, for this fiscal year and hereafter, the Federal share for Emergency Relief funds made available under section 125 of such title to respond to damage caused by Hurricane Fiona, shall be 100 percent.]

(Disaster Relief Supplemental Appropriations Act, 2023.)

****Reason for excluding: The FY 2024 Budget does not request General Fund appropriations for the Emergency Relief Program.****

ADMINISTRATIVE PROVISIONS—FEDERAL HIGHWAY ADMINISTRATION

SEC. 120. (a) For fiscal year [2023]2024, the Secretary of Transportation shall—
(1) not distribute from the obligation limitation for Federal-aid highways—

(A) amounts authorized for administrative expenses and programs by section 104(a) of title 23, United States Code; and

(B) amounts authorized for the Bureau of Transportation Statistics;

(2) not distribute an amount from the obligation limitation for Federal-aid highways that is equal to the unobligated balance of amounts—

(A) made available from the Highway Trust Fund (other than the Mass Transit Account) for Federal-aid highway and highway safety construction programs for previous fiscal years the funds for which are allocated by the Secretary (or apportioned by the Secretary under section 202 or 204 of title 23, United States Code); and

(B) for which obligation limitation was provided in a previous fiscal year;

(3) determine the proportion that—

(A) the obligation limitation for Federal-aid highways, less the aggregate of amounts not distributed under paragraphs (1) and (2) of this subsection; bears to

(B) the total of the sums authorized to be appropriated for the Federal-aid highway and highway safety construction programs (other than sums authorized to be appropriated for provisions of law described in paragraphs (1) through (11) of subsection (b) and sums authorized to be appropriated for section 119 of title 23, United States Code, equal to the amount referred to in subsection (b)(12) for such fiscal year), less the aggregate of the amounts not distributed under paragraphs (1) and (2) of this subsection;

(4) distribute the obligation limitation for Federal-aid highways, less the aggregate amounts not distributed under paragraphs (1) and (2), for each of the

programs (other than programs to which paragraph (1) applies) that are allocated by the Secretary under authorized Federal-aid highway and highway safety construction programs, or apportioned by the Secretary under section 202 or 204 of title 23, United States Code, by multiplying—

(A) the proportion determined under paragraph (3); by

(B) the amounts authorized to be appropriated for each such program for such fiscal year; and

(5) distribute the obligation limitation for Federal-aid highways, less the aggregate amounts not distributed under paragraphs (1) and (2) and the amounts distributed under paragraph (4), for Federal-aid highway and highway safety construction programs that are apportioned by the Secretary under title 23, United States Code (other than the amounts apportioned for the National Highway Performance Program in section 119 of title 23, United States Code, that are exempt from the limitation under subsection (b)(12) and the amounts apportioned under sections 202 and 204 of that title) in the proportion that—

(A) amounts authorized to be appropriated for the programs that are apportioned under title 23, United States Code, to each State for such fiscal year; bears to

(B) the total of the amounts authorized to be appropriated for the programs that are apportioned under title 23, United States Code, to all States for such fiscal year.

(b) **EXCEPTIONS FROM OBLIGATION LIMITATION.**—The obligation limitation for Federal-aid highways shall not apply to obligations under or for—

(1) section 125 of title 23, United States Code;

(2) section 147 of the Surface Transportation Assistance Act of 1978 (23 U.S.C. 144 note; 92 Stat. 2714);

(3) section 9 of the Federal-Aid Highway Act of 1981 (95 Stat. 1701);

(4) subsections (b) and (j) of section 131 of the Surface Transportation Assistance Act of 1982 (96 Stat. 2119);

(5) subsections (b) and (c) of section 149 of the Surface Transportation and Uniform Relocation Assistance Act of 1987 (101 Stat. 198);

(6) sections 1103 through 1108 of the Intermodal Surface Transportation Efficiency Act of 1991 (105 Stat. 2027);

(7) section 157 of title 23, United States Code (as in effect on June 8, 1998);

(8) section 105 of title 23, United States Code (as in effect for fiscal years 1998 through 2004, but only in an amount equal to \$639,000,000 for each of those fiscal years);

(9) Federal-aid highway programs for which obligation authority was made available under the Transportation Equity Act for the 21st Century (112 Stat. 107) or subsequent Acts for multiple years or to remain available until expended, but only to the extent that the obligation authority has not lapsed or been used;

(10) section 105 of title 23, United States Code (as in effect for fiscal years 2005 through 2012, but only in an amount equal to \$639,000,000 for each of those fiscal years);

(11) section 1603 of SAFETEA-LU (23 U.S.C. 118 note; 119 Stat. 1248), to the extent that funds obligated in accordance with that section were not subject to a limitation on obligations at the time at which the funds were initially made available for obligation; and

(12) section 119 of title 23, United States Code (but, for each of fiscal years 2013 through [2023]2024, only in an amount equal to \$639,000,000).

(c) REDISTRIBUTION OF UNUSED OBLIGATION AUTHORITY.—

Notwithstanding subsection (a), the Secretary shall, after August 1 of such fiscal year—

(1) revise a distribution of the obligation limitation made available under subsection (a) if an amount distributed cannot be obligated during that fiscal year; and

(2) redistribute sufficient amounts to those States able to obligate amounts in addition to those previously distributed during that fiscal year, giving priority to those States having large unobligated balances of funds apportioned under sections 144 (as in effect on the day before the date of enactment of Public Law 112–141) and 104 of title 23, United States Code.

(d) APPLICABILITY OF OBLIGATION LIMITATIONS TO TRANSPORTATION RESEARCH PROGRAMS.—

(1) IN GENERAL.—Except as provided in paragraph (2), the obligation limitation for Federal-aid highways shall apply to contract authority for transportation research programs carried out under—

(A) chapter 5 of title 23, United States Code;

(B) title VI of the Fixing America’s Surface Transportation Act; and

(C) title III of division A of the Infrastructure Investment and Jobs Act (Public Law 117-58).

(2) EXCEPTION.—Obligation authority made available under paragraph (1) shall—

(A) remain available for a period of 4 fiscal years; and

(B) be in addition to the amount of any limitation imposed on obligations for Federal-aid highway and highway safety construction programs for future fiscal years.

(e) REDISTRIBUTION OF CERTAIN AUTHORIZED FUNDS.—

(1) IN GENERAL.—Not later than 30 days after the date of distribution of obligation limitation under subsection (a), the Secretary shall distribute to the States any funds (excluding funds authorized for the program under section 202 of title 23, United States Code) that—

(A) are authorized to be appropriated for such fiscal year for Federal-aid highway programs; and

(B) the Secretary determines will not be allocated to the States (or will not be apportioned to the States under section 204 of title 23, United States Code), and will not be available for obligation, for such fiscal year because of the imposition of any obligation limitation for such fiscal year.

(2) RATIO.—Funds shall be distributed under paragraph (1) in the same proportion as the distribution of obligation authority under subsection (a)(5).

(3) AVAILABILITY.—Funds distributed to each State under paragraph (1) shall be available for any purpose described in section 133(b) of title 23, United States Code.

SEC. 121. Notwithstanding 31 U.S.C. 3302, funds received by the Bureau of Transportation Statistics from the sale of data products, for necessary expenses incurred pursuant to chapter 63 of title 49, United States Code, may be credited to the Federal-aid highways account for the purpose of reimbursing the Bureau for such expenses.

SEC. 122. Not less than 15 days prior to waiving, under his or her statutory authority, any Buy America requirement for Federal-aid highways projects, the Secretary of Transportation shall make an informal public notice and comment opportunity on the intent to issue such waiver and the reasons therefor: *Provided*, That the Secretary shall post on a website any waivers granted under the Buy America requirements.

SEC. 123. None of the funds made available in this Act may be used to make a grant for a project under section 117 of title 23, United States Code, unless the Secretary, at least 60 days before making a grant under that section, provides written notification to the House and Senate Committees on Appropriations of the proposed grant, including an evaluation and justification for the project and the amount of the proposed grant award.

SEC. 124. (a) A State or territory, as defined in section 165 of title 23, United States Code, may use for any project eligible under section 133(b) of title 23 or section 165 of title 23 and located within the boundary of the State or territory any earmarked amount, and any associated obligation limitation: *Provided*, That the Department of Transportation for the State or territory for which the earmarked amount was originally designated or directed notifies the Secretary of its intent to use its authority under this section and submits an annual report to the Secretary identifying the projects to which the funding would be applied. Notwithstanding the original period of availability of funds to be obligated under this section, such funds and associated obligation limitation shall remain available for obligation for a period of 3 fiscal years after the fiscal year in which the Secretary is notified. The Federal share of the cost of a project carried out with funds made available under this section shall be the same as associated with the earmark.

(b) In this section, the term “earmarked amount” means—

(1) congressionally directed spending, as defined in rule XLIV of the Standing Rules of the Senate, identified in a prior law, report, or joint explanatory statement, which was authorized to be appropriated or appropriated more than 10 fiscal years prior to the current fiscal year, and administered by the Federal Highway Administration; or

(2) a congressional earmark, as defined in rule XXI of the Rules of the House of Representatives, identified in a prior law, report, or joint explanatory statement, which was authorized to be appropriated or appropriated more than 10 fiscal years prior to the current fiscal year, and administered by the Federal Highway Administration.

(c) The authority under subsection (a) may be exercised only for those projects or activities that have obligated less than 10 percent of the amount made available for

obligation as of October 1 of the current fiscal year, and shall be applied to projects within the same general geographic area within 25 miles for which the funding was designated, except that a State or territory may apply such authority to unexpended balances of funds from projects or activities the State or territory certifies have been closed and for which payments have been made under a final voucher.

(d) The Secretary shall submit consolidated reports of the information provided by the States and territories annually to the House and Senate Committees on Appropriations.

SEC. 125. (a) Of the unallocated and unobligated balances available to the Federal Highway Administration, the following funds are hereby permanently cancelled, subject to subsections (b) and (c), from the following accounts and programs in the specified amounts:

- (1) \$53,160,115 from funds available in the "Surface Transportation Priorities" account (69 X 0538).*
- (2) \$1,839,130 from funds available in the "Delta Regional Transportation Development Program" account (69 X 0551).*
- (3) \$11,814,580 from funds available in the "Appalachian Development Highway System" account (69 X 0640).*
- (4) \$392,112 from funds available in the "Bridge Capacity Improvements" account (69 X 8057).*
- (5) \$30,640,110 from funds available in the "Miscellaneous Highway Project" account (69 X 8058).*
- (6) \$7,063,307 from funds available in the "Highway Projects" account (69 X 8382).*

(b) No amounts may be cancelled under subsection (a) from any funds for which a State exercised its authority under section 125 of division L of Public Law 114-113, section 422 of division K of Public Law 115-31, section 126 of division L of Public Law 115-141, section 125 of division G of Public Law 116-6, section 125 of division H of Public Law 116-94, section 124 of division L of Public Law 116-260, section 124 of division L of Public Law 117-103, or section 124 of division L of Public Law 117-328.

(c) No amounts may be cancelled under subsection (a) from any amounts that were designated by the Congress as an emergency requirement pursuant to a concurrent resolution on the budget or the Balanced Budget and Emergency Deficit Control Act of 1985.

Reason for including section: Rescissions of old earmarked funds with little or no recent activity.

Sec. 126. (a) Notwithstanding any other provision of law, \$60,000,000 from the funds described in subsection (b) shall be available to the Secretary to carry out the active transportation infrastructure investment program under section 11529 of division A of the Infrastructure Investment and Jobs Act (Public Law 117-58) (23 U.S.C. 217 note).

(b) Funds described in this subsection are any funds that—

- (1) are unobligated on the date of enactment of this Act; and*

(2) were made available for credit assistance under—

(A) the transportation infrastructure finance and innovation program under subchapter II of chapter 1 of title 23, United States Code, as in effect prior to August 10, 2005; or

(B) the transportation infrastructure finance and innovation program under chapter 6 of title 23 United States Code.

(c) Funds made available under subsection (a) to carry out the active transportation infrastructure investment program shall—

(1) except as otherwise provided under section 11529 division A of the Infrastructure Investment and Jobs Act (Public Law 117-58), be administered as if apportioned under chapter 1 of title 23, United States Code;

(2) be subject to the obligation limitation for Federal-aid highway and highway safety construction programs; and

(3) remain available until expended.

(d) For purposes of carrying out this section, the term “State” in section 11529 of division A of the Infrastructure Investment and Jobs Act (Public Law 117-58) shall have the meaning given such term in section 101 of title 23, United States Code.

Reason for including section: To provide funding for the Active Transportation Infrastructure Investment Program through repurposing unobligated TIFIA funding in lieu of a General Fund appropriation.

<i>Subject to Obligation Limitation</i>	<i>57,473,430,072</i>	<i>58,764,510,674</i>	<i>60,095,782,888</i>	<i>61,314,170,545</i>	<i>62,657,105,821</i>	<i>300,305,000,000</i>	-	<i>300,305,000,000</i>
Budget Authority from General Fund Supplemental Appropriations	9,454,400,000	9,454,400,000	9,454,400,000	9,454,400,000	9,454,400,000	-	47,272,000,000	47,272,000,000

1/ Amounts exempt from obligation limitation include \$639 million of the National Highway Performance Program apportionments and \$100 million for Emergency Relief. Amounts do not reflect sequestration of 5.7 percent of contract authority exempt from obligation limitation.

2/ Amounts for the Surface Transportation Block Grant Program include the 10 percent set aside for Transportation Alternatives.

3/ Amounts exclude \$245 million for Railway-Highway Grade Crossings Program and \$3.5 million takedown for safety-related programs. Such amounts are shown on a separate line.

4/ Includes FHWA Federal-aid Highway Program General Operating Expenses (GOE) and transfers to the Appalachian Regional Commission (ARC) for administrative activities associated with the Appalachian Development Highway System. Excludes administrative takedowns from the General Fund Supplemental Appropriations.

Program and Performance Statement

These accounts provide necessary resources to support Federal-aid Highways Program activities, Highway Infrastructure Program activities, Emergency Relief activities, Neighborhood Access and Environmental Review program activities, and maintain the agency's administrative and oversight functions. Funding will aid in the development, operations, and management of an intermodal transportation system that is safe for all users, provides equitable travel for all people, addresses the climate change challenge, and spurs innovation.

[] Non-add

1/ All fiscal years include FHWA General Operating Expenses (GOE) and transfers to the Appalachian Regional Commission (ARC) for administrative activities associated with the Appalachian Development Highway System. All fiscal years do not include amounts for other non-administrative programs authorized under Administrative Expenses.

2/ The Active Transportation Infrastructure Investment Program (ATIIIP) is authorized in the IJA as subject to General Fund appropriation. The Budget proposes to repurpose \$60 million in unobligated balances of Transportation Infrastructure Finance and Innovation Act program funding and associated obligation limitation to fund the ATIIIP.

3/ In all years, the exempt contract authority is comprised of \$639 million for the National Highway Performance Program and \$100 million for the Emergency Relief Program.

4/ FY 2022 reflects sequestration of 5.7 percent of contract authority exempt from obligation limitation per Sequestration Order dated May 28, 2021. FY 2023 reflects sequestration of 5.7 percent of contract authority exempt from obligation limitation per Sequestration Order dated March 28, 2022. FY 2024 reflects sequestration of 5.7 percent of contract authority exempt from obligation limitation pursuant to 2 U.S.C. 901a(6)(B)(ii).

5/ FHWA anticipates transfers to NHTSA in FY 2023 and FY 2024 amounts to be determined based on State penalty information.

6/ FHWA does not anticipate net transfers of new contract authority in FY 2023, and FY 2024, but does anticipate net transfers of carryover contract authority to be determined based on TIFIA loan activity.

7/ The Department of Transportation Appropriations Act, 2022 (Public Law 117-103) provided \$2.4 billion in additional highway funding from the General Fund in FY 2022. The Department of Transportation Appropriations Act, 2023 (Public Law 117-328) provided \$3.4 billion in additional highway funding from the General Fund in FY 2023.

8/ The IJA provided funding for administrative expenses as a takedown from the Highway Infrastructure Programs. Amounts shown reflect the aggregate of such takedowns.

9/ The Inflation Reduction Act of 2022 (Public Law 117-169) provided \$5.3 billion in additional highway funding from the General Fund in FY 2022.

10/ The Disaster Relief Supplemental Appropriations Act, 2022 (Public Law 117-43) provided \$2.6 billion in additional emergency relief funding from the General Fund for FY 2022. The Consolidated Appropriations Act, 2023 (Public Law 117-328) provided \$803 million in additional emergency relief funding from the General Fund for FY 2023.

11/ Cancellations of unobligated balances proposed in the FY 2024 Budget. The cancellations are comprised of \$11.8 million from the Appalachian Development Highway System account, \$55.0 million from the Miscellaneous Appropriations account, and \$38.1 million from the Miscellaneous Highway Trust Fund account.

12/ FY 2022, FY 2023, and FY 2024 include increases in FTE to levels necessary to properly execute the increased amount of programs and funding in the IJA.

The Budget proposes to repurpose \$60 million in unused Transportation Infrastructure Finance and Innovation Act program funding and associated obligation limitation to fund the ATIIP.

Executive Summary

Highway Safety Improvement Program

What is the request and what funds are currently spent on the program?

The FY 2024 budget includes \$3.4 billion for the Highway Safety Improvement Program (HSIP) to address the safety crisis on our roads. This core Federal-aid highway program supports the Secretary's safety priority by aiming to reduce fatalities and serious injuries on all public roads and for all road users. The IJA provided \$3.2 billion and \$3.3 billion for HSIP in FY 2022 and FY 2023, respectively. This program is funded through the Highway Trust Fund.

What is this program and what does this funding level support?

The Department of Transportation is committed to providing national leadership in highway safety as demonstrated by launching the National Roadway Safety Strategy (NRSS) in January 2022. The NRSS is built around the Safe System approach, which includes multiple elements including safer roads and identifies actions the Department will take to enable safer roads, including supporting the planning, design and implementation of safer roads and streets in all communities using all available and applicable Federal funding resources, including the HSIP. Making highways, roads, and streets safer will help decrease deaths and serious injuries on all public roads and for all road users and will help improve the social and economic well-being of our Nation.

The purpose of the HSIP directly aligns with the Department's Safety Strategic Goal. The HSIP requires a data-driven, strategic approach to improving highway safety on all public roads and for all road users, with a focus on performance. HSIP plays a critical role in helping States meet their safety performance targets as part of FHWA's transportation performance management framework. Accountability for meeting those targets is addressed through the HSIP.

What benefits will be provided to the American public through this request and why is this program necessary?

The National Highway Traffic Safety Administration (NHTSA) estimates that 31,785 people died in traffic crashes in the first nine months of 2022. This is a slight decrease as compared to the 31,850 estimated fatalities during the same time in 2021. The third quarter of 2022 represents the second straight quarter in which year-over-year fatalities have declined following a period of increases in fatalities that started in the second half of 2020.

Although many types of Federal-aid funds can and should be used to make roads safer, the HSIP anchors FHWA's safety efforts, providing States with critical safety funding that is used to save lives and prevent serious injuries on all public roads and for all road users. HSIP will support States in the implementation of the Safe System Approach, in which human life and health are primary considerations when designing a road. Furthermore, FHWA will work with States to encourage prioritizing safety-related investments in communities that have been historically underserved and adversely affected by past infrastructure decisions, with a focus on disadvantaged communities including high poverty and rural areas.

Detailed Justification Highway Safety Improvement Program

What is the request and what funds are currently spent on the program?

FY 2024 – Highway Safety Improvement Program (\$3.4 billion) (\$000)

Program	FY 2022 Actual	FY 2023 Enacted	FY 2024 Request
Highway Safety Improvement Program	3,228,261	3,292,826	3,358,683
Total	3,228,261	3,292,826	3,358,683

What is this program and what does this funding level support?

The HSIP is a core Federal-aid highway program that supports the Secretary’s safety priority by aiming to reduce fatalities and serious injuries on all public roads and for all road users. The HSIP requires a data-driven, strategic approach to improving highway safety on all public roads and for all road users with a focus on performance. The HSIP is legislated under sections 130, 148 and 150 of title 23, United States Code, and regulated under parts 490 and 924 of title 23, Code of Federal Regulations. The HSIP is a State-administered program that is driven by the Strategic Highway Safety Plan (SHSP) that each State creates and by a program of highway safety improvement projects. The HSIP also includes a set-aside for railway-highway crossing improvements and special rules for high-risk rural road safety, older driver and pedestrian safety, and vulnerable road user safety.

The HSIP provides resources that allow the States to implement innovations resulting from the latest highway safety research such as those disseminated through FHWA’s Every Day Counts (EDC) program and Proven Safety Countermeasures (PSC) initiative. EDC aims to identify and rapidly deploy proven, yet underutilized innovations to, among other things, enhance road safety. The PSC initiative consists of a collection of proven countermeasures and strategies, updated in 2021, that provide options for immediate action to accelerate the achievement of local, State, and National safety goals.

In addition, \$245 million of HSIP funding in FY 2024 is set aside for the Railway-Highway Crossings program to reduce the number of fatalities, injuries, and crashes at public railway-highway grade crossings. Through this program, State and local agencies implement data-driven practices and methodologies to administer their programs and to prioritize projects.

Another \$3.5 million of HSIP funding is set aside for transportation safety outreach, training, and education through the following activities: Operation Lifesaver, the Public Road Safety Clearinghouse, Work Zone Safety Grants, the National Work Zone Safety Information

Clearinghouse, and guardrail training. These programs support training and public education focused on work zones, railway-highway crossings, and other safety efforts.

The HSIP is a critical component of implementation of the performance management system first put in place by Congress in MAP-21 and then continued under the FAST Act and now under the IIJA. States and metropolitan planning organizations (MPOs) set annual safety performance targets that are used to assess fatalities and serious injuries on their roads. Unfortunately, at the three-year mark the majority of States failed to meet or make progress toward at least one of their annual safety performance targets. States that do not meet their safety targets are required to direct funds toward safety projects and develop a plan that describes the actions the State will take to meet or make significant progress toward their future safety targets.

In addition to these safety performance targets, the HSIP also includes three special rules for high-risk rural road safety, older driver and pedestrian safety, and vulnerable road user safety. FHWA assesses States' safety performance in each of these areas based on specific criteria established in legislation. States that do not meet the conditions are subject to either financial or programmatic requirements.

The HSIP also supports implementation of DOT's National Road Safety Strategy (NRSS). The Safe System Approach (SSA) is at the core of the NRSS and aims to eliminate fatal and serious injuries for all road users through a holistic view of the road system that anticipates human mistakes and develops the road system to be forgiving of human errors. Safety is the Department's number one priority, and the NRSS represents a Department-wide approach to working with stakeholders across the country to achieve this goal. The HSIP is a critical Federal-aid program used for the planning, design and implementation of safer roads and streets in all communities. The HSIP sets the funding and policy tone for national safety implementation efforts and therefore serves as the springboard for States and communities to accelerate their full adoption of the SSA and implementation of the NRSS.

The program emphasizes coordination among all surface transportation safety modes, including the National Highway Traffic Safety Administration (NHTSA), Federal Railroad Administration (FRA), Federal Transit Administration (FTA), and Federal Motor Carrier Safety Administration (FMCSA).

One of the core principles of the SSA is that safety is a shared responsibility. The HSIP requires coordination with NHTSA on its Highway Safety Program as it relates to Highway Safety Plans, Safety Performance Targets, and State Safety Data Information Systems. FHWA also coordinates with other modes on the DOT Traffic Records Executive Committee and the DOT Safety Council. The HSIP also requires States to collaborate and coordinate with stakeholders on emphasis areas of concern and develop strategies to address their safety challenges. Additionally, FHWA recognizes that achieving continued success requires teamwork with external organizations. The agency coordinates and collaborates on safety programming with the American Association of State Highway and Transportation Officials (AASHTO), The National Association of City Transportation Officials, the Roadway Safety Foundation, the Road to Zero Coalition and many other associations and organizations. By working together, the United States can achieve our goal of zero fatalities on our Nation's roadways.

To ensure that the program successfully meets its goals, FHWA plans to conduct an evaluation of portions of FHWA's Safety Program to assess whether efforts are being implemented as intended. The Office of Safety's Focused Approach to Safety provides additional resources to eligible high priority States to address the Nation's most critical safety challenges through additional program benefits. FHWA would like to determine if delivery of this program is effective and efficient. Through this assessment, FHWA aims to establish how effective and compliant the agency is in the implementation of an aspect of the Safety Program. Among other goals, the assessment would focus on identifying risks in the current and desired future state of the program; establishing strategies to manage those risks; and identifying opportunities to streamline program implementation.

What benefits will be provided to the American public through this request and why is this program necessary?

The HSIP provides funds to States to address safety challenges on all public roads, including local and rural roads, and for all road users. The HSIP provides States the resources to address areas of risk, including vulnerable road user safety, with innovative proven safety interventions. Funding the program at the requested level will help States to achieve the goal of zero deaths on our Nation's roads.

Under the FAST Act (FY 2016 to FY 2020 and extended through FY 2021), States obligated \$22.72 billion for approximately 23,500 highway safety improvement projects. In the first year of IIJA (FY 2022), States obligated more than \$5.5 billion to approximately 5,300 highway safety improvement projects.

Rural and local areas benefit from the HSIP. Based on information reported by the States in their 2021 annual HSIP reports, at least 30 percent of the States' HSIP projects are on rural roads representing on average 30 percent of HSIP expenditures. For rural safety projects, Lane and Roadway Departure accounted for 57 percent of projects, and Intersection projects were 23 percent of the total. In addition, 34 States obligated at least 17 percent of the States' HSIP funds for projects on local and Tribal roads, representing on average 10 percent of HSIP expenditures in 2020.

The HSIP provides resources that allow the States to implement innovations resulting from the latest highway safety research. The HSIP often funds new and innovative countermeasures to address high crash locations. Once those countermeasures are proven to be effective at reducing fatalities and serious injuries, they are deployed widely across the network via systemic safety improvements and integrated in State design standards and policies and systematically integrated across all projects. In 2021, 28 percent of HSIP projects were systemic safety improvement projects. These projects, of which there were 1,858 in 2020 totaling \$1.9 billion, included traffic signal improvements such as retiming, backplates and flashing yellow arrow, wrong way driving treatments, clear zone improvements, high friction surface treatments, lighting, pedestrian and traffic calming improvements, rumble strips, and more.

In FY 2024, the HSIP program will continue to help State, local and Tribal agencies address their safety needs to reduce fatalities and injuries on our Nation's roadways. The HSIP continues to provide a platform for State, local and Tribal agencies to advance implementation of the Safe

System Approach by making roads safer, as well as to address equity in their data driven safety analysis.

This Page Left Blank Intentionally

Executive Summary

National Highway Performance Program

What is the request and what funds are currently spent on the program?

The FY 2024 budget includes \$29.6 billion for the National Highway Performance Program (NHPP), which supports the Secretary's key priorities of enhancing transportation safety, building economic strength by providing efficient access to resources, markets and good-paying jobs, reducing inequities across transportation systems, tackling the climate crisis by reducing greenhouse gas emissions and investing in the transformation of our Nation's transportation infrastructure by improving the condition and performance of the National Highway System (NHS). Performance management requirements represent a key component of the NHPP. These requirements hold States accountable for achieving performance targets while continuing to give them the flexibility to make transportation investment decisions. The IIJA provided \$28.4 billion and \$29.0 billion for NHPP in FY 2022 and FY 2023, respectively. This program is funded through the Highway Trust Fund.

What is this program and what does this funding level support?

The NHPP provides funds to the States on a formula basis. In direct support of the Secretary's key priorities of safety and infrastructure, the NHPP's purpose is to preserve and improve the NHS. Due to expected population and economic growth, freight and passenger transportation demands are projected to increase 250 percent by 2050. Modernizing and preserving an efficient transportation system in this environment is critical to maintaining economic competitiveness.

Funding the NHPP at \$29.6 billion in FY 2024 supports improvements toward achieving a state of good repair and improved operations on the NHS and is consistent with the analyses presented in the biennial *Status of the Nation's Highways, Bridges, and Transit: Conditions and Performance* report to Congress (23rd Edition). Maintaining a state of good repair on the NHS reduces costly improvements that would be required if infrastructure were allowed to deteriorate.

What benefits will be provided to the American public through this request and why is this program necessary?

Preserving and improving the NHS through the NHPP keeps our Nation's highways and bridges safe, benefits both urban and rural areas nationwide, creates employment opportunities to support the development of a skilled and diverse transportation workforce, and strengthens the economy through the efficient movement of freight. It binds the country together by making interstate and intra-state commerce possible; helping connect people to their communities, jobs, and other vital resources. The NHPP emphasizes preservation of the NHS while giving States flexibility to make additional investments to enhance NHS condition and operational performance and to build new capacity. Furthermore, improvements to the NHS benefit both urban and rural areas nationwide.

Detailed Justification National Highway Performance Program

What is the request and what funds are currently spent on the program?

FY 2024 – National Highway Performance Program (\$29.6 billion) (\$000)

Program	FY 2022 Actual	FY 2023 Enacted	FY 2024 Request
National Highway Performance Program ^{1/}	28,439,442	29,008,231	29,588,396
Total	28,439,442	29,008,231	29,588,396

1/ \$639 million in FY 2022, FY 2023, and FY 2024 is exempt from obligation limitation of which \$36.4 million is sequestered each year (sequestration not reflected in table).

What is this program and what does this funding level support?

The NHPP, requested at \$29.6 billion in FY 2024, is a formula-based program that supports the Secretary’s key priorities of preserving safety and infrastructure by improving the condition of highways and bridges. It helps to keep roads and bridges safe; improves the Nation’s competitiveness in global trade; and maximizes the economic returns from transportation policies and investments.

Key features of the program include:

- a focus on improving and preserving the NHS;
- a performance-based framework;
- flexibility to the States for making transportation investment decisions; and
- requirements for risk-based asset management plans.

The NHPP requires a risk-based asset management approach. States must have a strategic and systematic process for operating, preserving, and improving physical assets on the NHS. It focuses on engineering and economic analysis using quality information to identify a structured sequence of maintenance, preservation, repair, rehabilitation, and replacement actions that will achieve a desired state of good repair over the lifecycle of the assets at minimum cost. The intent of this approach is to better manage system condition and performance.

The Federal Government has periodically defined and focused resources on the roads that were critical to national interests and that enhanced mobility, security, economic growth, and quality of life. Each time, the decision was made to emphasize a limited network of roads of critical national priority – the Federal-aid system (1921), the Interstate System (1956), and the National Highway System (1995). MAP-21 defined the NHS as a network comprised of the Interstate System, all principal arterials including border crossings, intermodal connectors, and roads important to national defense. The FAST Act maintained this network and added provisions for

removing some principal arterials from the NHS after review and reclassification by the States and FHWA.

The NHS totals approximately 220,000 miles. It provides mobility to the vast majority of the Nation's population and almost all of its commerce, supports national defense, and promotes intermodal connectivity. While NHS mileage is only a small portion of the Nation's overall public road mileage, it carries 55 percent of all vehicular traffic. Furthermore, the NHS is vital to rural communities. In rural areas, the NHS carries just under 50 percent of all vehicle miles traveled, and provides critical access for jobs, health care, and commerce.

The NHPP will continue to direct Federal funds towards addressing national performance goals for the NHS. Among these are the condition of pavements and bridges. Past performance has demonstrated that sustained investment in the Nation's roads and bridges leads to better roadway and bridge conditions. A couple examples of this include:

- The share of travel on NHS pavements with good ride quality rose from 48 percent to 62 percent between 2000 and 2019. This improvement came despite MAP-21 increasing NHS mileage by almost 60,000 miles. Bringing pavements up to a state of good repair provides the following benefits: decreased wear and tear on vehicles, and reduced repair costs; reduced traveler delays; and lowered crash rates. Given that the NHS carries the majority of all vehicular traffic, a 1 percent increase translates into 18 billion more vehicle miles travelled occurring on pavements with good ride quality.
- Even as the total number of NHS bridges in the Nation's inventory increased from 140,238 in 2013 to 146,403 in 2022 the percentage of the deck area on NHS bridges classified as in "Poor" condition dropped from 6.6 percent to 4.2 percent¹.

Additionally, the NHPP has performance provisions that will improve investment decision-making through a greater level of accountability for States to improve or preserve the condition of NHS pavements and bridges, and the performance of the system. These provisions require States to carry out a risk-based asset management process to monitor and evaluate conditions, establish future condition targets for eight performance measures, plan investment strategies, and program funding in support of these strategies. The NHPP has additional requirements for States to maintain minimum-level conditions for NHS bridges and interstate pavements, and to make significant progress in meeting their NHPP conditions and performance targets. The regulations to implement these new requirements took effect on May 20, 2017.

To ensure that the program successfully meets its goals, FHWA intends to conduct an evaluation of portions of the National Highway Performance Program (NHPP) to assess certain aspects of program implementation. This multibillion-dollar program provides support for the condition and performance of the National Highway System (NHS) and for the construction of new facilities on the NHS. It also ensures that investments of Federal-aid funds in highway

¹ In 2012, the Moving Ahead to Progress in the 21st Century Act (P.L. 112-141) required the establishment of measures to assess the condition of bridges on the NHS. Beginning in 2018, FHWA transitioned from the bridge classification of structurally deficient to various measures to assess the condition of NHS bridges established in 23 CFR 490 Subpart D.

construction are directed to support progress toward the achievement of performance targets established in a State's asset management plan for the NHS. While the NHPP contains multiple program areas, FHWA's evaluation will focus specifically on implementation of 23 USC 119 (e) – State Performance Management. The assessment will measure the efficiency, effectiveness and compliance in the implementation of the State Performance Management by identifying risks in the current, or desired future state of the program, as well as establishing strategies to successfully manage these risks and streamline program delivery.

What benefits will be provided to the American public through this request and why is this program necessary?

Preserving and improving the NHS through the NHPP keeps our Nation's highways and bridges safe, benefits both urban and rural areas nationwide, creates employment opportunities to support the development of a skilled and diverse transportation workforce, and strengthens the economy through the efficient movement of freight. The NHPP emphasizes preservation of the NHS while giving States the flexibility to make additional investments to enhance NHS condition and operational performance and to build new capacity while holding them accountable to minimum infrastructure condition requirements and the achievement of NHPP condition and performance targets.

Furthermore, the public investment in transportation will be more effectively utilized through improved decision-making that emphasizes safety for all users, equity in transportation, addressing climate change, and resilience in transportation infrastructure.

Executive Summary

Surface Transportation Block Grant Program

What is the request and what funds are currently spent on the program?

The FY 2024 budget includes \$14.4 billion for the Surface Transportation Block Grant (STBG) Program to support the Secretary's infrastructure priority by providing flexible funding that States and localities can use to improve the condition and performance of their multimodal transportation networks through a wide range of eligible projects including roads and bridges, transit and bicycle, and pedestrian facilities. The IJA provided \$13.8 billion and \$14.1 billion for STBG in FY 2022 and FY 2023, respectively. This program is funded through the Highway Trust Fund.

What is this program and what does this funding level support?

In direct support of the Secretary's key priorities of safety, transportation equity, addressing climate change and resilience, improving core assets, and transforming our Nation's transportation infrastructure, the STBG is a formula-based program that helps States and localities to invest in Federal-aid roads and support safe and accessible, multimodal transportation networks within urban and rural communities.

The STBG program has the greatest flexibility of FHWA's core highway programs. Whereas the National Highway Performance Program (NHPP) is limited to the approximately 220,000-mile National Highway System (NHS); the STBG program is available for the roughly 1,034,000 miles of Federal-aid highways, for bridges on any public road, for on-road and off-road bicycle and pedestrian facilities, and for transit capital projects. This program gives transportation agencies, local governments, and communities the ability to direct funding to address State and local priorities and will help improve safety and accessibility for all users, including pedestrians and bicyclists, improve air quality, reduce congestion, foster affordable transportation, and improve quality of life.

What benefits will be provided to the American public through this request and why is this program necessary?

The flexibility of the STBG program provides transportation agencies with the ability to direct funding to State and local priorities. It increases mobility, access to community resources, and improves quality of life for all communities. Projects funded through this program enjoy broad popularity with communities across the country.

Detailed Justification Surface Transportation Block Grant Program

What is the request and what funds are currently spent on the program?

FY 2024 – Surface Transportation Block Grant Program (\$14.4 billion) (\$000)

Program	FY 2022 Actual	FY 2023 Enacted	FY 2024 Request
Surface Transportation Block Grant Program	13,835,404	14,112,112	14,394,355
Total	13,835,404	14,112,112	14,394,355

What is this program and what does this funding level support?

The STBG program supports the Secretary’s key priorities of safety, transportation equity, addressing climate change and resilience, improving core assets, and transforming our Nation’s transportation infrastructure by providing funds to States to invest in Federal-aid eligible highways to replace, rehabilitate, and preserve roads, bridges, and other highway infrastructure, and to expand or build new transportation facilities. The STBG program is the most flexible of the core highway programs. The STBG program is available for the roughly 1,034,000 miles of highways, roads and streets that are Federal-aid eligible (public roads that are not functionally classified as rural minor collectors or local roads). This includes not only the Interstate System and the NHS but also many other roads and streets, bridges on any public road, some transit projects, pedestrian and bicycle facilities, and projects that meet the eligibilities of the Recreational Trails Program and the Transportation Alternatives set-aside.

The Transportation Alternatives set-aside is frequently used by States, MPOs, and local governments for smaller scale but critically important multimodal transportation projects at both the State and local level, including pedestrian and bicycling infrastructure. In the IIJA, Congress increased the size of the Transportation Alternatives set-aside from \$850 million annually in the last years of the FAST Act to 10 percent of STBG per fiscal year, which amounted to \$1.38 billion in FY 2022 and increases to nearly \$1.5 billion by FY 2026. This set-aside helps States, local governments, and communities pursue transportation improvements that meet their priorities for safety, access, equity, mobility, recreation, development, or economic objectives. Transportation Alternatives funds are used to create safe, accessible, and environmentally sensitive communities through projects that provide access to jobs, services, housing, and recreation, and enhance and preserve the human and natural environment.

A long-term commitment to funding the STBG program has resulted in the following benefits:

- The share of vehicle miles travelled on Federal-aid highway pavements with good ride quality rose from 43 percent in 2000 to 53 percent in 2019.
- The percentage of the deck area of bridges classified as in “Poor” condition dropped from 7.5 percent in 2013 to 5.0 percent in 2022 even as the total number of bridges in the

Nation's inventory increased from 607,751 to 620,669. The percentage of the deck area on bridges classified as in "Good" condition dropped from 44.7 percent in 2013 to 42.9 percent in 2022.²

- More short trips are being accomplished by walking and biking. Approximately 12 percent of all trips were made by bicycling or walking in 2017, compared with 8 percent in 1994. In 2017, walking comprised 11 percent and bicycling 1 percent of all trips.

Funds are apportioned by formula and are subject to the overall Federal-aid obligation limitation. The following amounts are set aside from each State's STBG apportionment:

- An estimated \$288 million in FY 2024 for State Planning and Research (SP&R).
- An estimated \$1.44 billion in FY 2024 for Transportation Alternatives.

After the SP&R and Transportation Alternatives set-asides have been calculated, 55 percent of a State's annual STBG apportionment will be available for obligation in the following areas in proportion to the relative share of State population:

- Urbanized areas with population greater than 200,000.
- Urbanized areas with population 50,000 to 200,000.
- Areas with population 5,000 to 49,999.
- Areas with population of less than 5,000.

The remaining 45 percent of funding may be used in any area of the State.

- The Governor of a land border State may designate up to 5 percent of STBG program funds available for use in any area of the State for border infrastructure projects eligible under the SAFETEA-LU border program.
- STBG program funds available for use in any area of the State are subject to transfer penalties under section 154 (Open Container Requirements) and 164 (Minimum Penalties for Repeat DWI or DUI Offenders) of title 23, U.S.C., which, then, at the election of the State, are released as HSIP funds and/or transferred to the National Highway Traffic Safety Administration.

What benefits will be provided to the American public through this request and why is this program necessary?

The STBG program supports the Secretary's priorities by: funding projects which reduce transportation related fatalities and serious injuries of all roadway users, including pedestrians and bicyclists; improving quality of life and access to vital resources for all communities through targeted urban and rural funding; providing accessible transportation choices and connections through flexible funding and the Transportation Alternatives set-aside; and supporting the development of a skilled and diverse transportation workforce through the use of funds to

² Beginning in 2018, FHWA transitioned from the bridge classification of structurally deficient to various measures to assess the condition of NHS bridges established in 23 CFR 490 Subpart D.

supplement and expand upon FHWA's existing On-the-Job Training and workforce development programs. Furthermore, the STBG program supports communities of all sizes by targeting a majority of funds to areas in proportion to the relative share of State population. Both urbanized areas and rural areas nationwide receive targeted funding through the STBG program.

By providing STBG funds to States, FHWA can encourage and work with the States to:

- Fund projects that increase the safety of America's roads and advance a future without transportation-related serious injuries or fatalities;
- Invest in a transportation system that will provide reliable and efficient access to resources, markets and good-paying jobs;
- Fund projects that will streamline the transportation system to reduce vehicle miles traveled and the time vehicles spend idling due to traffic congestion, thereby reducing greenhouse gas emissions;
- Fund projects that promote safe, affordable, accessible, and equitable multimodal access to opportunities and services; and
- Fund projects that meet the challenges of the transportation system today and in the future.

In 2019, 53 percent of vehicle miles travelled on Federal-aid highways occurred on pavements with good ride quality. The proposed investment level is projected to increase this share to over 54 percent in 2023. This forecast is based on analyses developed for the biennial *Status of the Nation's Highways, Bridges, and Transit: Conditions and Performance* (C&P) report and takes into account increased funding requested for the STBG and NHPP programs. Given that Federal-aid highways carry five-sixths of all vehicular traffic, each 1 percentage point change translates into 28 billion more vehicle miles travelled occurring on pavements with good-ride quality.

Each biennial C&P report identifies a backlog of needed bridge rehabilitation investments, consisting of all potential improvements to bridges that appear to be cost-effective, based solely on their current conditions. The 24th Edition of the C&P report estimated this backlog to be \$131.84 billion. The proposed funding levels, including funding requested for the STBG and NHPP programs, is projected to help reduce this backlog for bridges by 30 percent by 2023.

The Transportation Alternatives set-aside provides funding to communities across America to expand travel choice, improve quality of life, and protect the environment. Transportation Alternatives encompasses a variety of smaller-scale transportation projects such as pedestrian and bicycle facilities, recreational trails, safe routes to school projects, community improvements such as historic preservation and vegetation management, and environmental mitigation related to stormwater and habitat connectivity. This funding, through a combination of suballocation and competitive grants, flows directly to local governments, State and Federal resource agencies, and nonprofit organizations partnered with governments, for these vital projects. The program includes prioritization of project location and impact in high-need areas as defined by the State, such as low-income, transit-dependent, rural, or other areas, consistent with the Administration's Justice40 initiative. Recreational trail and environmental mitigation projects support the America the Beautiful initiative.

Through its flexibility, wide range of eligible projects, and targeted nature, the STBG Program improves safety, mobility, accessibility, transportation choices, and quality of life for all communities.

This Page Left Blank Intentionally

Executive Summary

Congestion Mitigation & Air Quality Improvement Program

What is the request and what funds are currently spent on the program?

The FY 2024 budget includes \$2.64 billion for the Congestion Mitigation and Air Quality Improvement (CMAQ) Program to help States and local governments reduce harmful emissions and highway congestion, and also assist many areas in reaching attainment of the National Ambient Air Quality Standards (NAAQS). The IJA provided \$2.54 billion and \$2.59 billion for CMAQ in FY 2022 and FY 2023, respectively. This program is funded through the Highway Trust Fund.

What is this program and what does this funding level support?

The CMAQ Program supports the Secretary's priority of reducing environmental harms, addresses environmental justice concerns and climate change by providing a funding source for transportation projects and programs that help meet the requirements of the Clean Air Act. CMAQ investments support transportation projects that reduce the mobile source emissions for which an area has been designated nonattainment or maintenance for ozone, carbon monoxide, and particulate matter by the Environmental Protection Agency (EPA). Many CMAQ funded projects, in addition to improving the Nation's air quality, can also address environmental justice concerns and reduce greenhouse gas emissions.

The CMAQ Program supports the Secretary's priority of safety by funding projects that reduce congestion thereby improving traffic flow and system efficiency resulting in lower vehicle crash and injury risk.

Projects funded through CMAQ enhance transportation equity and economic inclusion by improving air quality in communities near major roadways that are disproportionately affected by harmful emissions.

The CMAQ Program supports the Secretary's priorities of improving core assets and transforming our Nation's transportation infrastructure by providing funding to: improve transit; support Amtrak; install electronic vehicle charging stations and other alternative fuel projects; promote the use of advanced vehicle technologies and alternatively fueled vehicles; and improve multi-modal access via bicycle and pedestrian improvements and shared micromobility initiatives.

What benefits will be provided to the American public through this request and why is this program necessary?

The CMAQ Program provides funding for projects that improve air quality in areas with air quality challenges. Through its statutory focus on transportation projects and programs that reduce harmful emissions, the CMAQ Program enhances quality of life and improves health nationwide by contributing to the attainment and maintenance of the NAAQS that act as a public health benchmark for many of the densely populated areas of the country.

Detailed Justification Congestion Mitigation & Air Quality Improvement Program

What is the request and what funds are currently spent on the program?

FY 2024 – Congestion Mitigation & Air Quality Improvement Program (\$2.64 billion) (\$000)

Program	FY 2022 Actual	FY 2023 Enacted	FY 2024 Request
Congestion Mitigation & Air Quality Improvement Program	2,536,491	2,587,221	2,638,965
Total	2,536,491	2,587,221	2,638,965

What is this program and what does this funding level support?

The CMAQ Program serves a crossover function between transportation capital investments and environmental stewardship. Projects supported with CMAQ funds will help States improve air quality and reduce regional traffic congestion.

The CMAQ Program supports the Secretary’s safety, economic strength, climate change, and infrastructure transportation priorities:

- CMAQ projects can improve economic strength by providing additional transportation funding investments to densely populated areas with poor air quality. The investments may improve access to jobs and other growth opportunities via multi-modal improvements and transit enhancements.
- CMAQ projects that decrease emissions of criteria pollutants can also decrease greenhouse gas emissions, as well as decrease fuel consumption/energy use through the use of advanced vehicle technologies.
- CMAQ funds can be used for projects that contribute to the transformation of our Nation’s infrastructure such as the installation of electric vehicle charging stations to support an expanding fleet of electric vehicles, support for Amtrak, improved public transit, new bicycle and pedestrian facilities, shared micromobility initiatives, and the use of private-public partnerships (PPP).
- CMAQ provides funds for infrastructure projects that target congestion relief and can improve traffic flow and system efficiency, resulting in lower vehicle crash and injury risk.

Projects supported with CMAQ funds must meet the three primary eligibility requirements:

- Reduce emissions
- Be located in or benefit an EPA-designated nonattainment or maintenance area
- Be identified as a transportation project

Project selection and implementation are made at the State and local levels. FHWA provides program eligibility criteria and broad policy guidance, as well as final project approvals.

CMAQ Program funds are available to support a wide range of government and non-profit organizations, as well as private entities contributing to PPP, but are planned and administered by the State DOTs and metropolitan planning organizations (MPOs). These organizations often plan or implement air quality programs and projects as well as provide CMAQ funding to others to implement projects. Sharing of total project costs, both capital and operating, is a critical element of a successful public-private venture, particularly if the private entity is expected to realize profits as part of the joint venture. State and local officials are urged to consider a full range of cost-sharing options when developing a PPP, including a larger State or local match.

In addition, States provide annual reports on all CMAQ investments each fiscal year. These reports include: obligations of program funds; descriptions of individual projects; and potential impacts on air quality, congestion, and multimodal choice. The data provided in the annual reports and the CMAQ Public Access System allows for transparency; showing that the program continues to provide incremental benefits through enhanced regional and local air quality improvement, and through contributions to congestion relief. Both of these factors—air pollution and highway congestion—are considered to be negative externalities that reduce the quality of life in many metropolitan areas of the country.

In 2021, approximately 102 million people nationwide lived in counties with pollution levels above the primary NAAQS. The program will continue to help provide continuity with State and local programming and provide adequate resources to maintain the air quality progress in many areas as they strive towards attainment of the NAAQS.

What benefits will be provided to the American public through this request and why is this program necessary?

The CMAQ Program provides funding for projects that improve air quality in areas with air quality challenges and reduce traffic congestion. Through its statutory focus on transportation projects and programs that reduce harmful emissions, the program enhances quality of life and improves health nationwide through its contributions to attainment and maintenance of the NAAQS that act as a public health benchmark for many of the densely populated areas of the country.

The costs of congestion can be an obstacle to economic activity. In addition, congestion can hamper quality of life through diminished air quality, lost personal time, and other negative factors. Since some congestion relief projects also reduce idling, the negative emissions impacts of stop-and-go driving, and the number of vehicles on the road, they have a corollary benefit of improving air quality. Based on their emissions reductions, these types of projects are eligible for CMAQ Program funding. For example, CMAQ Program funded high-occupancy vehicle and high-occupancy toll lanes can help reduce congestion and improve traffic flow.

The CMAQ Program offers States and MPOs significant flexibility in selecting projects that provide air quality improvements and congestion relief benefits. Recent CMAQ-funded projects include converting high-occupancy vehicle lanes to high-occupancy toll lanes, installing

alternative fuel charging and refueling infrastructure, supporting advanced intelligent transportation systems, retrofitting diesel engines in ferry boats, and applying advanced diesel engine technologies for trucks and locomotives.

For example, the City of Hobart, Indiana, in partnership with the South Shore Clean Cities/Northwestern Indiana Regional Planning Commission Green Fleet Program, installed new facilities to safely service its fleet of compressed natural gas (CNG) vehicles, which are fueled on-site at the city's 12-pump CNG fueling station. The CNG fueling station was constructed with the help of CMAQ Program funding. Having both the fueling station and garage as part of the city's public works facility reduces downtime from traveling outside of the city to fuel and the CNG vehicles can now be serviced in-house.

In Atlanta, Georgia, Georgia Commute Options is a program managed by the Atlanta Regional Commission and funded through the Georgia Department of Transportation with support from CMAQ Program funding. The Commission has worked with employers, commuters, and schools to reduce the number of single-occupant vehicles on Metro Atlanta's roads-particularly during peak times. Free services are provided to motivate the public to choose clean commute alternatives and to get rewarded in the process. This effort includes various incentives such as trip planning, discounted transit passes, and guaranteed rides home, if a commuter switches from driving alone to a clean commute. Clean commute options promoted through the program include public transit, telework, carpool, vanpool, biking, and walking.

Since its inception through FY 2021, approximately \$42 billion in CMAQ funds have supported almost 45,000 projects that reduced emissions of particulate matter, carbon monoxide, nitrogen oxides, and/or volatile organic compounds. CMAQ-funded projects, such as public transit and bicycle and pedestrian facilities that promote air quality improvements, multimodal transportation options, and active living can lead to congestion reduction and positive health benefits.

Many CMAQ projects also provide additional benefits. For example, CMAQ projects that promote the use of alternative fuel vehicles can also reduce CO₂, a greenhouse gas that contributes to climate change. These reductions also support Executive Order 14008: *Tackling the Climate Crisis at Home and Abroad*. Also, in addition to congestion relief, projects that focus on improved traffic flow and system efficiency can provide safety and public health benefits via lower vehicle crash and injury risk while also reducing traveler stress levels. Safety-related CMAQ-eligible projects are specifically permitted to receive 100 percent Federal funding.

Executive Summary

Promoting Resilient Operations for Transformative, Efficient, and Cost-saving Transportation (PROTECT) Formula Program

What is the request and what funds are currently spent on the program?

The FY 2024 budget includes \$1.46 billion for formula grants to States for activities to assess and address infrastructure vulnerabilities to current and future weather events, including natural disasters and climate change. The IIJA provided \$1.40 billion and \$1.43 billion for this program in FY 2022 and FY 2023, respectively. This program is funded through the Highway Trust Fund.

What is this program and what does this funding level support?

The PROTECT Formula Program apportions funding to States for resilience improvements, including projects that use materials, structural techniques, or non-structural techniques to prepare more of the Nation's infrastructure for the impacts of climate change, extreme weather events, and natural disasters. Eligible projects include highways and bridges, public transportation facilities, and port facilities. Activities by States to assess their vulnerabilities to climate change, extreme weather events and natural disasters, which will help States plan more resilient systems and design more resilient and cost-effective projects, are also supported by the PROTECT Formula Program.

What benefits will be provided to the American public through this request and why is this program necessary?

PROTECT Formula Program activities will protect surface transportation assets by making them more resilient to current and future weather events and natural disasters. Community resilience improvements and strategies will allow for the continued operation or rapid recovery of surface transportation systems. Coastal infrastructure will be better protected from the long-term risk of sea level rise and other climate change risks, and infrastructure nationwide will be better protected from precipitation, flooding events, heat, and other consequences of a changing climate. Natural infrastructure that protects and enhances surface transportation assets while improving ecosystem conditions will be utilized.

The PROTECT Formula Program directly addresses the Secretary's key priority of Resilience and Addressing Climate Change and will support the U.S. Department of Transportation Climate Action Plan: Revitalizing Efforts to Bolster Adaptation & Increase Resilience. In addition, this program will advance Executive Order 14008: *Tackling the Climate Crisis at Home and Abroad* and will allow the United States to move quickly to improve infrastructure resilience against the impacts of climate change that are already manifested and will continue to intensify according to current trajectories.

Detailed Justification PROTECT Formula Program

What is the request and what funds are currently spent on the program?

FY 2024 – PROTECT Formula Program (\$1.46 billion)			
(\$000)			
Program	FY 2022 Actual	FY 2023 Enacted	FY 2024 Request
PROTECT Formula Program	1,402,756	1,430,811	1,459,428
Total	1,402,756	1,430,811	1,459,428

What is this program and what does this funding level support?

The PROTECT Formula Program apportions funding to States for activities that enable communities to assess and address vulnerabilities to current and future weather events and other natural disasters and changing conditions due to climate change, including sea level rise. Eligible projects include highways and bridges, public transportation facilities, intercity rail, and port facilities including intermodal connectors.

PROTECT Formula Program funds can be used for four types of projects:

- Planning, including projects to develop a resilience improvement plan; resilience planning, predesign, design, or the development of data tools; technical capacity building; and evacuation planning and preparation.
- Resilience Improvements, including projects to improve resilience of existing surface transportation infrastructure to weather events, climate change, wildfires, and other natural disasters; natural or nature-based infrastructure; and flood protection measures, raising or lengthening bridges, or slope stabilization work.
- Community Resilience and Evacuation Routes, including improving evacuation routes to meet future needs, ensuring access to critical destinations, and supporting emergency and recovery activities.
- At-Risk Coastal Infrastructure, including work to make coastal highways and non-rail infrastructure more resilient to flooding, erosion, wave action, storm surge, or sea level rise; to improve transportation and public safety; and reduce future maintenance and rebuilding costs.

Eligible project activities include project development, design, property acquisition, construction/reconstruction and rehabilitation, and environmental mitigation. PROTECT Formula Program funds also support planning activities, including systems level assessments of

vulnerability to future climate and other natural hazards, and current and long-term planning activities and investments to promote resilience.

What benefits will be provided to the American public through this request and why is this program necessary?

The PROTECT Formula Program focuses work and resources on making the highway system and surface transportation more resilient to natural hazards, including climate change. Dedicated funding for resilience projects is needed to ensure that projects are built to withstand current weather impacts, natural disasters, and future changes in climate.

Projects funded by the PROTECT Formula Program will be more resilient to future threats and provide a range of benefits to the public. While coastal highways are exposed to storm surge, sea level rise and high tide flooding, inland areas are also vulnerable to future changes in climate such as flooding made worse by stronger precipitation events, heat waves that can damage pavements, and wildfires followed by rain events that can cause landslides. Resilience improvements and improved routes to support evacuations and relief efforts after events, for example, will improve the safety of the traveling public and our communities, support freight movements, and facilitate economic growth. These activities will also help reduce long-term/life-cycle infrastructure costs and costs to users. This program also supports improved regional planning, programming, and project level analysis that address future risks, not just historical risks, to ensure that communities can minimize life-cycle costs and maximize benefits resulting from building, operating and maintaining transportation systems.

Climate change presents a significant and growing risk to the safety, effectiveness, equity and sustainability of our transportation infrastructure and the communities it serves. We have a once-in-a-generation opportunity to mitigate this risk by investing in the resilience of our transportation networks.

This Page Left Blank Intentionally

Executive Summary

National Highway Freight Program

What is the request and what funds are currently spent on the program?

The FY 2024 budget includes \$1.43 billion for the National Highway Freight Program (NHFP). The IIJA provided \$1.37 billion and \$1.40 billion for NHFP in FY 2022 and FY 2023, respectively. This program is funded through the Highway Trust Fund.

What is this program and what does this funding level support?

The NHFP provides funds to States on a formula basis to improve the efficient movement of freight on the National Highway Freight Network (NHFN). States have programmed funding in their State Freight Plans to invest in infrastructure and operational improvements that facilitate the movement of freight, address transportation bottlenecks in the supply chain, improve safety and productivity, and enhance economic competitiveness.

Investment in the Nation's freight infrastructure is vital for a safe and efficient freight transportation system that supports projected population and economic growth while maintaining a competitive edge in the global economy. Nationwide, truck Vehicle Miles Traveled increased nearly 1.9 percent per year on the Interstate from 2015-2020.³ Between 2018 and 2050, the U.S. is projected to see freight activity grow by 43 percent in tonnage.⁴ This growth will have an impact on the infrastructure and operations of the Nation's highways.

The NHFP will support projects to address growth and the need for more and better-directed investment in freight infrastructure, consistent with the U.S. DOT's National Freight Strategic Plan, individual State Freight Plans, the analyses developed by FHWA for the *Status of the Nation's Highways, Bridges, and Transit: Conditions and Performance*, 24th Edition, and the U.S. DOT's Supply Chain Assessment of the Transportation Industrial Base: Freight and Logistics.

What benefits will be provided to the American public through this request and why is this program necessary?

This program addresses a longstanding need to improve the country's supply chains by reducing the existing backlog in freight infrastructure investment. The program eligibilities directly support the Secretary's priorities including safety, economic strength and global competitiveness, climate and sustainability, and transformation of our Nation's transportation infrastructure. The NHFP offers States and their private-sector partners guaranteed funding to plan and deliver improvements in freight infrastructure and operations that yield a high return on Federal investment for the economy and provide wide-ranging public benefits.

³ Source: Highway Statistics Series 2016 and 2020 <https://www.fhwa.dot.gov/policyinformation/statistics>

⁴ Source: U.S. Department of Transportation, Federal Highway Administration (FHWA), Bureau of Transportation Statistics (BTS), Freight Analysis Framework Version 5 (FAF5.3). BTS and FHWA provide estimates for freight flows for base year 2017 and forecasted data through year 2050.

Detailed Justification National Highway Freight Program

What is the request and what funds are currently spent on the program?

FY 2024 – National Highway Freight Program (\$1.43 billion) (\$000)

Program	FY 2022 Actual	FY 2023 Enacted	FY 2024 Request
National Highway Freight Program	1,373,933	1,401,411	1,429,439
Total	1,373,933	1,401,411	1,429,439

What is this program and what does this funding level support?

The NHFP provides funds to States, by formula, to improve supply chains and the efficient movement of freight on the NHFN. With the FY 2024 request of \$1.43 billion, States will be able to add projects to their State Freight Plans to further develop infrastructure and operational improvements that reduce congestion, improve safety and productivity, and strengthen the contribution of the NHFN to the economic competitiveness of the United States.

The NHFP advances the Secretary’s priorities of safety, economic strength and global competitiveness climate and sustainability, and transformation of our Nation’s transportation infrastructure. As part of the administration of the program in recent years, FHWA has:

- Provided training to State DOTs on the use of freight performance measures and the identification of bottlenecks to support a data-driven approach to prioritizing the investment of NHFP funds. This can help States target projects that address issues of safety and economic strength.
- Released freight mobility trends tool to assist States in identifying bottlenecks, associated cost of delay, and emissions related to those facilities.
- Assisted States and Metropolitan Planning Organizations (MPOs) in technical matters related to the designation of critical rural and critical urban freight corridors. These designations allow investment to support economic strength and investment in core assets. This effort aligns with the Executive Order 13985: *Advancing Racial Equity and Support for Underserved Communities through the Federal Government*.
- Developed strategies for States and MPOs to improve freight mobility and address freight bottlenecks. These include tools and resources to improve freight movement using solutions such as transportation system management and operations and targeted freight capacity improvements. Technology and operational solutions respond to changing

conditions on the transportation network and evolving supply chain demands. Capacity solutions encompass highway and multimodal improvements to enhance the capability of the transportation system to safely accommodate existing and projected freight volume.

- Developed a compilation of noteworthy practices in using NHFP funding to advance eligible freight intermodal (including waterway/port) and freight rail projects. This information can aid States seeking to diversify the application of NHFP funding to other modes in addressing climate change and resiliency. This effort aligns with Executive Order 14008: *Tackling the Climate Crisis at Home and Abroad*.
- Conducted listening sessions with State DOTs regarding procedures for updating State Freight Plans.

The NHFP yields a high return on Federal investment for the economy and provides wide-ranging public benefits such as safety, mobility, health, and the environment. Freight projects are often multimodal, multi-jurisdictional, complex, or involve partnership with the private sector, making them difficult to administer under other Federal and State funding programs. The Department supports the provision of predictable Federal funds for implementing freight solutions to address the widespread need and a significant backlog of projects. The program is contributing to reducing this backlog, helping the U.S. freight industry meet the growth in demand in a responsible, effective, and sustainable way.

As of September 30, 2021, States had obligated 86 percent of all NHFP funds apportioned between FY 2017 and FY 2021. In addition, some States have further leveraged the NHFP funding by offering it to other non-Federal partners through State-run competitive grant programs, expanding the range of funding partners beyond the typical Federal-State cost-share arrangement. At least four States (California, Illinois, Iowa, and Minnesota) sub-allocated their NHFP funding to projects selected through a competitive grant program run by the State or a designated entity. This innovative approach to investment increases the non-Federal investment and expands public and private sector participation.

The program supports improvements across the multi-modal U.S. transportation system. From FY 2017-2021, nine States authorized freight intermodal and freight rail projects. Examples include California and Minnesota, which authorized their NHFP funding for multi-modal projects including the construction of double-track freight railway at the Port of Long Beach and operational improvements at the Duluth Seaway Port Authority, respectively. In addition, Iowa has recently authorized NHFP funding for designing a rail-to-truck/truck-to-rail transloading facility to be operated by the Burlington Junction Railway. States continue to program their funding for future freight intermodal or freight rail projects, including rail projects at ports, highway-rail grade separation projects, and inland waterway improvements. The IJA will continue to support multi-modal transportation by increasing the amount of funding dedicated towards freight intermodal and freight rail projects and expanding eligibility to include locks and dams and marine highway system projects.

What benefits will be provided to the American public through this request and why is this program necessary?

An efficient, reliable transportation system supports economic competitiveness, which is vital to maintaining stability and supporting employment for the Nation, States, and localities. The U.S. population growth, coupled with consumer demand for goods, will continue to drive freight growth. In 2020, the transportation system handled an estimated 52.88 million tons of freight worth approximately \$51.21 billion daily.⁵ Although freight moves on all modes of transportation, trucking carries the predominant portion of freight by tonnage and value of goods moved. Investing in freight infrastructure is needed to enhance capacity, connectivity, and reliability of the freight transportation system. These investments in the freight transportation system will strengthen U.S. competitiveness and support economic development for years to come.

Disruptions to speed and reliability add to business costs, export costs, the cost of consumer goods, and the ability of industry to support jobs. On February 24, 2021, the President issued Executive Order 14017: *America's Supply Chains* that called for a review of the transportation and logistics industrial base. The intent of this effort was to build resilient supply chains that can respond to the supply chain crisis caused by the COVID-19 pandemic and future disruptions. In response to E.O. 14017, the U.S. DOT released the Supply Chain Assessment of the Transportation Industrial Base: Freight and Logistics that provided a series of recommendations, including investing in freight infrastructure.

Continued investment in freight infrastructure will be important for the nation to meet its national Truck Travel Time Reliability target under the strain of increased demand on the supply chain. Nationwide, truck travel increased nearly 1.9 percent per year on the Interstate from 2015-2020.⁶ Freight tonnage across all modes is expected to grow by approximately 43 percent between 2018 and 2050. Investment in the Nation's freight transportation infrastructure is needed to support safety and maintain a global competitive edge through projected population and economic growth. Based on a 2018 review of FAST Act State Freight Plans, approximately half of the State Freight Plans identified planned improvements for projects other than highway construction. These included freight planning studies, projects to address freight bottlenecks, truck parking facilities, and Intelligent Transportation Systems improvements. NHFP funding is being used for truck parking facilities in the Midwest, real-time transportation information systems in the West, and electronic vehicle screening and credentialing systems in the South.

⁵ Source: U.S. Department of Transportation, Federal Highway Administration (FHWA), Bureau of Transportation Statistics (BTS), Freight Analysis Framework Version 5 (FAF5.3). BTS and FHWA provide estimates for freight flows for base year 2017 and forecasted data through year 2050.

⁶ Source: Highway Statistics Series 2016 and 2020 <https://www.fhwa.dot.gov/policyinformation/statistics>

Executive Summary

Carbon Reduction Program

What is the request and what funds are currently spent on the program?

The FY 2024 budget includes \$1.28 billion for formula grants to States to reduce transportation emissions. The IIJA provided \$1.23 billion and \$1.26 billion for the Carbon Reduction Program in FY 2022 and FY 2023, respectively. This program is funded through the Highway Trust Fund.

What is this program and what does this funding level support?

The Carbon Reduction Program was created by the IIJA to provide formula grants to States to reduce Carbon Dioxide (CO₂) emissions from highway transportation. Approximately two-thirds of the funding under this program is suballocated to States by population. The projects and programs funded by the Carbon Reduction Program supports the Administration's efforts to make progress towards tackling the climate crisis by reducing CO₂ emissions while improving mobility and accessibility, reducing local environmental impacts, and supporting alternative fuel vehicles.

Carbon Reduction Program funds can be used for projects that contribute to the clean modernization and transformation of our Nation's infrastructure such as vehicle-to-infrastructure communications equipment, public electric vehicle charging infrastructure, energy efficient alternatives to existing street lighting and traffic control devices, advanced congestion management projects, transit projects, on- and off-road pedestrian and bicycle trail facilities, and projects to reduce the environmental and community impacts of freight movement.

The program also requires States to develop a carbon reduction strategy that supports efforts to reduce transportation emissions within two years of enactment.

What benefits will be provided to the American public through this request and why is this program necessary?

Transportation has become the largest source of U.S. CO₂ emissions. The Carbon Reduction Program will reduce CO₂ emissions from transportation, consistent with Executive Orders and other commitments prioritizing actions throughout the Government to address climate change. Projects funded under this program will help build a modern, sustainable infrastructure to provide an equitable, clean energy future.

The Carbon Reduction Program offers States and MPOs significant flexibility in selecting projects that meet local needs. The program provides funding for States to implement a mix of strategies appropriate to each State that address the transportation carbon footprint while also providing for increased safety, equity, and mobility performance. The American public will benefit from a clean, efficient, multimodal and smart transportation system that works for all users and enables the sustainable, safe, efficient, and environmentally conscious movement of goods.

Detailed Justification Carbon Reduction Program

What is the request and what funds are currently spent on the program?

FY 2024 – Carbon Reduction Program (\$1.28 billion)			
(\$000)			
Program	FY 2022 Actual	FY 2023 Enacted	FY 2024 Request
Carbon Reduction Program	1,233,657	1,258,330	1,283,497
Total	1,233,657	1,258,330	1,283,497

What is this program and what does this funding level support?

The Carbon Reduction Program is a Federal-aid highway program enacted under the IIJA that provides formula grants to States to reduce CO₂ emissions from transportation sources. The program supports Executive Order 14008: *Tackling the Climate Crisis at Home and Abroad* through a Government-wide approach to reducing climate pollution in every economic sector. The program directly supports the Secretary’s climate change and transformation priorities by providing funding for States to implement projects and programs that make progress towards a clean, efficient, multimodal, and smart transportation system that supports and efficient movement of goods and works for all users.

The Carbon Reduction Program provides a flexible funding source for transportation projects and programs to help reduce CO₂ emissions and improve the way that the transportation system interacts with people and the environment. Carbon Reduction Program funds can be used for projects and programs that contribute to the clean modernization and transformation of our Nation’s infrastructure such as vehicle-to-infrastructure communications equipment, public electric vehicle charging infrastructure, energy efficient alternatives to existing street lighting and traffic control devices, advanced congestion management projects, transit projects, on- and off-road pedestrian and bicycle trail facilities, and port electrification and other projects to reduce the environmental and community impacts of freight movement.

The FY 2024 budget requests \$1.28 billion for the Carbon Reduction Program. Of the total funding under this program, 65 percent will be suballocated by population. For eligible projects located outside of a Transportation Management Area, States are required to first coordinate or consult with any MPO or regional transportation planning organization where the project is located before obligating funding for the projects.

The Carbon Reduction Program also requires that two years after the date of the IIJA enactment, each State develop a carbon reduction strategy which supports efforts to reduce on-road CO₂ emissions. The strategy must identify projects and strategies to reduce transportation CO₂ emissions and support the reduction of transportation emissions in the State. The strategies must

be developed in consultation with any MPO designated within the State, submitted to the Secretary for certification, and updated every four years.

What benefits will be provided to the American public through this request and why is this program necessary?

The Carbon Reduction Program will help respond to an increasingly urgent climate crisis by funding projects that reduce CO₂ emissions, the largest component of greenhouse gas (GHG) emissions associated with human activity. These projects will also reduce environmental impacts in American communities, expand multimodal transportation options, and increase access to public charging and fueling facilities for alternative fuel vehicles.

The Sixth Assessment Report by the Intergovernmental Panel on Climate Change (IPCC), released on August 7, 2021, confirms that human activities are increasing GHG concentrations that have warmed the atmosphere, ocean, and land at a rate that is unprecedented in at least the last 2000 years.⁷ Each additional ton of CO₂ produced by the combustion of fossil fuels and other activities contributes to future warming and other climate impacts.

Transportation has become the largest source of U.S. CO₂ emissions. Between 1990 and 2020, transportation sector CO₂ emissions increased by 7.0 percent, while CO₂ emissions from all other sectors have declined by 14.0 percent. The increase in transportation sector GHG emissions has occurred despite increasingly stringent fuel economy standards for light-duty and medium- and heavy-duty vehicles.

The Carbon Reduction Program will reduce GHG emissions from transportation, consistent with Executive Orders and other commitments prioritizing actions throughout the Government to address climate change. These include Executive Order 13990, which articulates national policy objectives including reducing GHG emissions, and Executive Order 14008, which recommits the U.S. to the Paris Agreement and calls for the U.S. to begin the process of developing its nationally determined contribution to global GHG reductions. Under that nationally determined contribution the U.S. will target reducing GHG emissions by 50-52 percent below 2005 levels by 2030. E.O. 14008 also calls for a Government-wide approach to the climate crisis, acknowledging opportunities to create jobs to build a modern, sustainable infrastructure, to provide an equitable, clean energy future, and to put the United States on a path to achieve net-zero emissions, economywide, no later than 2050.

The Carbon Reduction Program offers States and MPOs significant flexibility in selecting projects that meet local needs. The program provides funding for States to implement a mix of strategies appropriate to each State that address the transportation carbon footprint while also providing for increased safety, equity, and mobility performance. The American public will benefit from a clean, efficient, multimodal and smart transportation system that works for all users and enables the sustainable, safe, efficient, and environmentally conscious movement of goods.

⁷ See IPCC, 2021: Summary for Policymakers. In: Climate Change 2021: The Physical Science Basis. Contribution of Working Group I to the Sixth Assessment Report of the Intergovernmental Panel on Climate Change, *available at* <https://www.ipcc.ch/report/ar6/wg1/#SPM>.

This Page Left Blank Intentionally

Executive Summary

Metropolitan Transportation Planning

What is the request and what funds are currently spent on the program?

The FY 2024 budget includes \$456 million for Metropolitan Transportation Planning funding. The IIJA provided \$438 million and \$447 million for this program in FY 2022 and FY 2023, respectively. This program is funded through the Highway Trust Fund.

What is this program and what does this funding level support?

Metropolitan areas are comprised of multiple governmental agencies and jurisdictions, which have an interest in and needs for transportation investment. Through a coordinated, regional approach to planning, a metropolitan planning organization (MPO) engages the local jurisdictions as well as the State Department of Transportation (State DOT) and transit operators in a regional process that identifies the needs and investment priorities for the region. The results are a performance-based long range (20-year) Metropolitan Transportation Plan and a shorter term (4-year) program of transportation projects (Transportation Improvement Program). The MPOs are required to establish system performance goals and outcomes as part of the metropolitan transportation planning process and direct their investments toward meeting those outcomes.

The \$456 million request will provide MPOs with adequate resources to conduct the metropolitan planning process. Furthermore, this program supports the Secretary's safety and infrastructure goals by helping MPOs follow a coordinated transportation planning process that meets system performance goals, objectives, and indicators.

What benefits will be provided to the American public through this request and why is this program necessary?

This request will help MPOs make investments that improve the Nation's transportation system in a safe, transparent, and accountable manner while engaging the public, elected officials, and other stakeholders in the process. MPOs will then use Federal transportation funds more efficiently and effectively to focus on national performance goal areas.

Through this program, MPOs promote equity in transportation planning by working with States to identify transportation improvement options, including improved access to all modes (e.g., bicycle, pedestrian, and transit), increased transportation network connectivity, and telecommunications and delivery services.

Detailed Justification Metropolitan Transportation Planning

What is the request and what funds are currently spent on the program?

FY 2024 – Metropolitan Transportation Planning (\$456 million) (\$000)

Program	FY 2022 Actual	FY 2023 Enacted	FY 2024 Request
Metropolitan Transportation Planning	438,121	446,884	455,821
Total	438,121	446,884	455,821

What is this program and what does this funding level support?

MPOs use Metropolitan Planning funds for multimodal, performance based, transportation planning and programming in metropolitan areas. Metropolitan planning activities include the collection and analysis of data on demographics, trends, and system performance; travel demand and system performance forecasting; identification and prioritization of transportation system improvement needs; performance management, and coordination of the planning process and decision-making with the public, elected officials, and stakeholder groups.

Metropolitan areas are comprised of multiple governmental agencies and jurisdictions, which have an interest in and have needs for transportation investment. Through a coordinated, regional approach to planning, an MPO engages the local jurisdictions as well as the State DOT and transit operators in a regional process that identifies the needs and investment priorities for the region. The results are a long range (20-year) Metropolitan Transportation Plan (MTP) and a shorter term (4-year) program of transportation projects (Transportation Improvement Program (TIP)). The Infrastructure Investment and Jobs Act (IIJA) added housing coordination and planning for Complete Streets to the metropolitan and statewide transportation planning processes. MPOs establish system performance goals and outcomes as part of the metropolitan transportation planning process and direct their investments toward meeting those system performance outcomes. This program supports the Secretary’s goals of transportation equity, and safety, as well as renewed emphasis on Complete Streets, climate change and planning for a resilient transportation network, by helping MPOs follow a coordinated transportation planning process that meets system performance goals and objectives.

The IIJA requires each MPO to use not less than 2.5 percent of its metropolitan planning funds on specified planning activities to increase safe and accessible options for multiple travel modes for people of all ages and abilities (similarly, a State must use not less than 2.5 percent of its State Planning and Research funds.) However, a State or MPO, with the approval of the Secretary, may opt out of the requirement if the State or MPO has Complete Streets standards and policies in place, and has developed an up-to-date Complete Streets prioritization plan that

identifies a specific list of Complete Streets projects to improve the safety, mobility, or accessibility of a street.

The \$456 million FY 2024 budget request will provide the metropolitan transportation planning program with adequate resources for MPOs to conduct the metropolitan planning processes and direct investments toward improving transportation system outcomes while engaging the public, elected officials, and other stakeholders.

These funds will allow each MPO to carry out a coordinated transportation planning process and develop long range MTPs and TIPs that make effective use of limited transportation funding. These fiscally constrained, prioritized plans and programs account for transportation system performance needs, future population and employment, future land use, economic development, public involvement, multimodal considerations and connectivity (including bicycle, pedestrian, highway, and transit), freight movement, environmental mitigation, transportation systems operation, safety, and congestion mitigation. Furthermore, in support of a performance-driven, outcome-based planning process, the IIJA continued the requirement that MPOs have a performance-based process for developing their TIPs.

Additionally, Metropolitan Planning funds are used by MPOs to conduct corridor studies that lead to project development; demonstrate explicit consideration and response to public input; update demographic information to use in travel demand modeling; increase the accessibility and mobility of people and freight; develop policies and standards for complete streets; and improve the resiliency and reliability of the transportation system.

What benefits will be provided to the American public through this request and why is this program necessary?

This request supports the Secretary’s strategic goals of Economic Strength and Global Competitiveness, Equity, and Transformation by helping MPOs direct investments toward improving transportation system outcomes in a safe, transparent, equitable, and accountable manner while engaging the public, elected officials, and other stakeholders in the process. MPOs will then use Federal transportation funds to focus on the national goal areas more efficiently and effectively through a continuing, cooperative, and comprehensive planning process. MPOs’ use of performance measures and targets in the decision-making process will provide transparency, and their reporting of progress toward achieving performance targets will lead to improved accountability.

Through this program, MPOs engage the public and promote equity in transportation planning by working with States to identify transportation improvement options, including improved access to all modes (e.g., bicycle, pedestrian, and transit), increased transportation network connectivity, and improved telecommunications and delivery services.

This Page Left Blank Intentionally

Executive Summary

Appalachian Development Highway System

What is the request and what funds are currently spent on the program?

The FY 2024 budget includes \$250 million in advance supplemental appropriations to support the completion of the Appalachian Development Highway System (ADHS). Funds will be distributed by formula to States with one or more counties (including any political subdivision within the area) in the Appalachian Region. The IJA provided \$250 million in both FY 2022 and FY 2023. Additionally, \$100 million from the General Fund was provided through appropriation acts in each of FY 2022 and FY 2023. This program is funded through the General Fund.

What is this program and what does this funding level support?

The funds under this program are apportioned to the Appalachian States according to the percentages derived from the 2021 Appalachian Development Highway System Cost-to-Complete Estimate, dated March 2021, and confirmed as each Appalachian State's relative share of the estimated remaining need to complete the ADHS. This apportionment is adjusted to exclude those corridors that such States have no current plans to complete, as reported in the 2013 Appalachian Development Highway System Completion Report, unless those States have modified and assigned a higher priority for completion of an ADHS corridor, as reported in the 2020 Appalachian Development Highway System Future Outlook.

The formula for this program contains the following considerations:

- No Appalachian State will be apportioned an amount more than 30 percent of the amount made available for construction of the Appalachian Development Highway System under this program.
- Each State will be apportioned an amount not less than \$10 million for each of fiscal years 2022 through 2026.
- A State will not receive an apportionment that exceeds the remaining funds needed to complete the Appalachian development highway corridor or corridors in the State, as identified in the latest available cost-to-complete estimate for the system prepared by the Appalachian Regional Commission.

What benefits will be provided to the American public through this request and why is this program necessary?

The ADHS Program supports the Secretary's priorities by providing for critical infrastructure, spurring economic growth in this historically isolated region, and ensuring rural regions are connected to cities and towns. The ADHS Program provides residents with safe and reliable access to jobs, education, health care, and social services. It also plays a vital role in giving the Appalachian region access to economic opportunities. Having a modern system of highways is essential for economic growth and for enabling Appalachia to become a net contributor to the national economy.

Detailed Justification Appalachian Development Highway System

What is the request and what funds are currently spent on the program?

FY 2024 – Appalachian Development Highway System (\$250 million) (\$000)

Program	FY 2022 Actual	FY 2023 Enacted	FY 2024 Request
Appalachian Development Highway System	350,000	350,000	250,000
Total	350,000	350,000	250,000

What is this program and what does this funding level support?

The ADHS was initiated in 1965 because Appalachia was underserved by the interstate highway system, which sometimes bypassed the rural region’s rugged terrain. The system is a network of 33 distinct corridors (about 3,000 miles) linking the region to interstates and providing access to regional and national markets. The ADHS provides reliable transportation access in 13 States: Alabama, Georgia, Kentucky, Maryland, Mississippi, New York, North Carolina, Ohio, Pennsylvania, South Carolina, Tennessee, Virginia, and West Virginia.

Today, more than 91 percent of the ADHS is under construction or open to traffic. By 2040, close to 100 percent of the network is expected to be complete and open to traffic. The funding provided by this Program will help finalize the network.

The ADHS Program distributes funds by formula to States with one or more counties (including any political subdivision within the area) in the Appalachian Region for construction of the ADHS.

The funds under this program are apportioned to the Appalachian States according to the percentages derived from the 2021 Appalachian Development Highway System Cost-to-Complete Estimate, dated March 2021, and confirmed as each Appalachian State’s relative share of the estimated remaining need to complete the ADHS. This apportionment will be adjusted to exclude those corridors that such States have no current plans to complete, as reported in the 2013 Appalachian Development Highway System Completion Report, unless those States have modified and assigned a higher priority for completion of an Appalachian Development Highway System corridor, as reported in the 2020 Appalachian Development Highway System Future Outlook.

In implementing the ADHS Program, FHWA works closely with the Appalachian Regional Commission (ARC) – an economic development agency of the Federal government that partners with State governments and counties in the region. The ARC’s mission is to promote innovation,

partnership, and investment to build communities, strengthen the economy and improve socioeconomic conditions in Appalachia.

What benefits will be provided to the American public through this request and why is this program necessary?

This program supports the President’s efforts outlined in the Executive Orders 14002: *Economic Relief Related to the COVID-19 Pandemic*, 13985: *Advancing Racial Equity and Support for Underserved Communities Through the Federal Government*, and 14008: *Tackling the Climate Crisis at Home and Abroad*. This program does so by improving the quality of life of the Appalachia residents and visitors. Projects funded through the ADHS Program include components that strengthen safety, expand lifestyle choices, and enhance the economic standard of living. By significantly increasing the number of areas that are within a reasonable driving distance, this project will greatly increase people’s access to jobs, housing, recreation, healthcare, shopping, and other amenities. As a result of shorter commute times, greenhouse gas emissions are reduced and underserved communities can have better access to healthcare facilities, which is paramount for providing and receiving treatment to those affected by the pandemic and other ailments.

The IJA provides more than \$1.2 billion for the ADHS from FY 2022 through FY 2026. Annual funding for the ADHS will increase approximately 150 percent compared to FY 2021, providing dedicated funding to the ADHS to spur economic growth in the Appalachian region.

Ensuring rural regions are connected to the rest of America’s cities and towns is key to our Nation’s economic success. In January 2022, FHWA launched the IJA’s investment in the ADHS by making available \$246 million to the Appalachian States for FY 2022.

The construction of the ADHS has increased economic activity across the region – including job creation and business expansion. According to a 2017 analysis titled “Economic Analysis of Completing the Appalachian Development Highway System”, funded by and completed for the ARC, more than 168,000 jobs were created or maintained due to increased economic activity associated with the ADHS while \$9 billion was added to the gross regional product. The ADHS also saves 231 million hours of travel time annually. Completion of the ADHS is estimated to create 47,000 more jobs and add \$8.7 billion in goods and services annually across the Appalachian States.

The ADHS also has improved travel time for commuters and truckers. Much of the freight transported through the region travels long distance to destinations outside of Appalachia. The region’s corridors serve as important national transportation links. According to the above-cited study, in 2015, use of the ADHS resulted in approximately \$10.7 billion in transportation cost savings and productivity gains. These benefits extend beyond the Appalachian States. Twenty percent of car vehicle hours saved, and 31 percent of freight truck vehicle hours saved are for trips with the beginning, end, or both located outside the Appalachian States. This shows that the ADHS plays a vital role for regional and national freight movement.

This Page Left Blank Intentionally

Executive Summary
**Bridge Replacement, Rehabilitation, Preservation, Protection, and
Construction (Bridge Formula Program)**

What is the request and what funds are currently spent on the program?

The FY 2024 budget includes \$5.5 billion in advance supplemental appropriations for a formula program that provides funds to States for highway bridge replacement, rehabilitation, preservation, protection, or construction projects on public roads. The IJA provided \$5.5 billion in both FY 2022 and FY 2023. This program is funded through the General Fund.

What is this program and what does this funding level support?

The Bridge Replacement, Rehabilitation, Preservation, Protection, and Construction Program (hereafter, Bridge Formula Program (BFP)) supports the Secretary's key priorities of safety, transportation equity, addressing climate change and resilience, improving core assets, and transforming our Nation's transportation infrastructure by providing funds to the States to invest in highway bridge replacement, rehabilitation, preservation, protection, or construction projects on any public road.

What benefits will be provided to the American public through this request and why is this program necessary?

The BFP represents the single largest dedicated bridge investment since the construction of the interstate highway system – providing over \$26.5 billion to States, the District of Columbia and Puerto Rico over five years and \$825 million for Tribal transportation facilities. Nationwide, the BFP is expected to help repair approximately 15,000 highway bridges.

The BFP supports the Secretary's priorities by keeping our Nation's bridges safe, addressing equity, barriers to opportunity, and challenges faced by individuals and underserved communities in rural areas, as well as restoring community connectivity – benefiting both urban and rural areas nationwide. Additionally, the BFP is vitally important in creating employment opportunities to support the development of a skilled and diverse transportation workforce, strengthening the economy through the efficient movement of freight, providing equitable access to services, and improving our Nation's transportation infrastructure.

Detailed Justification Bridge Formula Program

What is the request and what funds are currently spent on the program?

FY 2024 – Bridge Formula Program (\$5.5 billion)			
(\$000)			
Program	FY 2022 Actual	FY 2023 Enacted	FY 2024 Request
Bridge Formula Program	5,500,000	5,500,000	5,500,000
Total	5,500,000	5,500,000	5,500,000

What is this program and what does this funding level support?

The BFP supports the Secretary’s key priorities of safety, transportation equity, addressing climate change and resilience, improving core assets, and transforming our Nation’s transportation infrastructure by providing funds to the States to invest in highway bridge replacement, rehabilitation, preservation, protection, or construction projects on any public road. In January 2022, FHWA released the first tranche of BFP funding to States for FY 2022 and published initial guidance for the program. In October 2022, FHWA released the second tranche of BFP funding for FY 2023.

This program includes two set-asides:

- 15 percent is set-aside for use on off-system bridges, an estimated \$796 million for FY 2024. For funds used on an off-system bridge that is owned by a county, town, township, city, municipality or other local agency, or federally recognized Tribe, the Federal share is 100 percent.
- 3 percent is set-aside for use on Tribal Transportation Facility bridges, an estimated \$165 million for FY 2024. The Federal share for these projects is 100 percent.

After these set-asides, funds for this program are distributed by the following statutory formula:

- 75 percent by the proportion that the total cost of replacing all bridges classified in poor condition in such State compared to the sum of the total cost to replace all bridges classified in poor condition in all States.
- 25 percent by the proportion that the total cost of rehabilitating all bridges classified in fair condition in such State compared to the sum of the total cost to rehabilitate all bridges classified in fair condition in all States.

The program also requires that the apportionments be adjusted so that each State receives no less than \$45 million each fiscal year.

The BFP has a broad range of eligibilities to address the Nation's bridge needs. Funds can be used on any highway bridge that is listed in the National Bridge Inventory (NBI), which in 2022 included 620,669 bridges. It can also be used on any new highway structure that upon the completion of construction would meet the established definition of a highway bridge and would be required to be reported to the NBI, irrespective of what public agency owns the bridge.

As this is a new program that was established by the enactment of the IJA, data is not available to show its impact on the transportation infrastructure. However, this program supplements the other FHWA programs in which highway bridge projects are eligible, such as the Bridge Investment Program, the Surface Transportation Block Grant Program (STBG) and National Highway Performance Program (NHPP). Long-term commitments to funding the STBG and NHPP have resulted in the percentage of the deck area of highway bridges classified as in "Poor" condition dropping from 7.3 percent in 2013 to 5.0 percent in 2022 even as the total number of bridges in the Nation's inventory increased from 607,751 to 620,669. With the BFP, additional benefits are expected as program funds are encouraged to be first used for projects that improve the condition of in-service highway bridges classified in poor condition and that preserve or improve the condition of in-service highway bridges classified in fair condition.

Additionally, States are required to set aside 15 percent of their BFP funding to address off-system bridge needs. This set-aside will supplement the existing STBG off-system bridge set-aside, and the expectation is that additional benefits will be achieved in addressing the needs and improving the condition of off-system highway bridges. To maximize the benefits of this program with respect to off-system bridges, an increased Federal share is provided for off-system bridge projects not owned by a State Department of Transportation or a Federal agency. The Federal share for costs reimbursed with BFP funds under this program for an off-system bridge, owned by a county, town, township, city, municipality or other local agency, or Federally recognized Tribe, is 100 percent.

What benefits will be provided to the American public through this request and why is this program necessary?

The BFP supports the Secretary's priorities by keeping our Nation's highways and bridges safe, addressing equity, barriers to opportunity, and challenges faced by individuals and underserved communities in rural areas, as well as restoring community connectivity – benefiting both urban and rural areas nationwide. Additionally, the BFP is vitally important in creating employment opportunities to support the development of a skilled and diverse transportation workforce, strengthening the economy through the efficient movement of freight and providing equitable access to services, and improving our Nation's transportation infrastructure.

Executive Summary

National Electric Vehicle Infrastructure Formula Program

What is the request and what funds are currently spent on the program?

The FY 2024 budget includes \$1.0 billion in advance supplemental appropriations to support deployment of electric vehicle (EV) charging infrastructure. The IJA provided \$1 billion for this program in both FY 2022 and FY 2023. This program is funded through the General Fund.

What is this program and what does this funding level support?

The National Electric Vehicle Infrastructure (NEVI) Formula Program provides funding to States to build out a national electric vehicle charging network, an important step towards making electric vehicle charging accessible to all Americans. Funds from this program are used for:

- The acquisition and installation of EV charging infrastructure to serve as a catalyst for the deployment of such infrastructure and to connect it to a network to facilitate data collection, access, and reliability.
- Proper operation and maintenance of EV charging infrastructure.
- Data sharing about EV charging infrastructure to ensure the long-term success of investments.

States are required to submit a plan describing the use of funds distributed under this program. No State may obligate its apportioned NEVI Formula Program funds for EV charging infrastructure projects until that State's Plan has been submitted and approved by FHWA.

From the funds for this program, ten percent will be set aside for grants to States or localities that require additional assistance to strategically deploy EV charging infrastructure.

In FY 2022, \$300 million was set aside to establish a Joint Office of Energy and Transportation. No additional funds are requested in FY 2023 and FY 2024 for the Joint Office.

What benefits will be provided to the American public through this request and why is this program necessary?

The program represents the first-ever major Federal investment program specifically dedicated to EV charging infrastructure and reflects the Administration's commitment to combating climate change by helping to facilitate increased adoption of zero-emission vehicles.

The goal of the NEVI Formula Program is to strategically deploy an interconnected network of EV charging stations along highway corridors by providing States with formula funding. It creates the building blocks to facilitate a national network in a way that provides drivers across America with the confidence that they can drive long distances and have reliable charging infrastructure when needed.

Detailed Justification National Electric Vehicle Infrastructure Formula Program

What is the request and what funds are currently spent on the program?

FY 2024 – National Electric Vehicle Infrastructure Formula Program (\$1.0 billion) (\$000)

Program	FY 2022 Actual	FY 2023 Enacted	FY 2024 Request
National Electric Vehicle Infrastructure Formula Program	1,000,000	1,000,000	1,000,000
Total	1,000,000	1,000,000	1,000,000

What is this program and what does this funding level support?

The NEVI Formula Program provides funding to deploy a historic nationwide charging network that will make EV charging accessible for more Americans. In addition to providing formula funding for States, ten percent of the NEVI Formula Program will be set aside each fiscal year for the Secretary of Transportation to provide discretionary grants to help fill gaps in the national network.

To implement this program, each State is required to submit an EV Infrastructure Deployment Plan that describes how the State intends to use its apportioned NEVI Formula Program funds. No State may obligate its NEVI Formula Program funds for EV charging infrastructure projects until that State’s Plan has been submitted and approved by FHWA. Initially, funding under this program is directed to designated Alternative Fuel Corridors for electric vehicles to build out this national network, particularly along the Interstate Highway System. When the national network is fully built out, funding may be used on any public road or in other publicly accessible locations. States can use NEVI Formula Program funding for a wide range of investment types that directly support the installation of EV charging infrastructure in eligible locations to include planning, acquisition and installation; operating assistance; traffic control and signage; data sharing; and mapping/analysis activities.

This program directly addresses several of the Secretary’s key priorities, including climate and sustainability and the transformation of our Nation’s existing transportation network into one that meets the future needs of travel and transportation. The transportation sector has become the largest source of U.S. greenhouse gas (GHG) emissions. Reducing emissions from transportation through increased adoption of zero-emission vehicles is consistent with Executive Order 13990⁸, which includes a national policy objective to reduce GHG emissions, and Executive Order

⁸ [Federal Register :: Advancing Racial Equity and Support for Underserved Communities Through the Federal Government](#)

14008⁹, which recommits the U.S. to the Paris Agreement. EVs have been identified as a cleaner, more equitable, and more affordable form of transportation. In addition, they represent an opportunity to support good-paying, union jobs.¹⁰

Other key priorities addressed by this program include economic strength, global competitiveness, and equity. State EV Infrastructure Deployment Plans must specifically include sections that detail how States will address labor, workforce, and equity considerations in a manner consistent with the Justice40 Initiative, as described in E.O. 14008, as well as with the Administration’s Policy to empower workers through rebuilding our Nation’s infrastructure for a sustainable economy.

All 50 states, the District of Columbia and Puerto Rico will be required to submit EV infrastructure deployment plans for FY 2024. These plans are required to unlock the FY 2024 NEVI Formula Program funding to help states accelerate the important work of building out the national EV charging network and making electric vehicle charging accessible to all Americans. The FY 2024 Plans will build upon the prior plans for FY 2022 and FY 2023, which were submitted and approved by September 27, 2022. These plans demonstrate a widespread commitment from states to build out EV charging infrastructure to help accelerate the adoption of electric vehicles, create good jobs, and combat the climate crisis.

What benefits will be provided to the American public through this request and why is this program necessary?

The Administration has set an ambitious target of 50 percent EV sale shares in the U.S. by 2030.¹¹ The NEVI Formula Program will help put the U.S. on a path to establish an equitable network of 500,000 chargers to make EVs accessible to all Americans.

This program addresses the need of standardizing travelers’ experience along the Nation’s burgeoning long-distance EV charging network by both facilitating the identification of locations where EV charging infrastructure is needed in regular intervals along corridors that facilitate long-distance travel, and by outlining minimum standards and requirements for EV charging infrastructure deployment to provide a convenient and reliable charging experience along these corridors. The NEVI Formula Program helps to create an expectation for consistent and convenient EV charging experiences, thus facilitating large-scale adoption of EVs.

⁹ Section 219 of Executive Order 14008, Tackling the Climate Crisis at Home and Abroad and OMB, “Interim Implementation Guidance for the Justice40 Initiative,” M-21-28 (July 20, 2021) available at <https://www.whitehouse.gov/wp-content/uploads/2021/07/M-21-28.pdf>

Executive Summary

Federal Lands & Tribal Transportation Programs

What is the request and what funds are currently spent on the program?

The FY 2024 budget includes \$1.39 billion for the Federal Lands and Tribal Transportation Programs (FLTTP). IJA provided \$1.34 billion and \$1.37 billion for these programs in FY 2022 and FY 2023, respectively. IJA funding for the FLTTP is through the Highway Trust Fund. In FY 2022 and FY 2023, an additional \$75 million and \$40 million, respectively, from the General Fund was provided through appropriations acts for the Nationally Significant Federal Lands and Tribal Projects Program.

What is this program and what does this funding level support?

Federal Lands Transportation Program (FLTTP) –\$439 million for projects that improve multimodal transportation on roads, bridges, trails, transit systems, electric vehicle infrastructure, and other transportation facilities *within* the Federal estate (e.g., national forests, parks, wildlife refuges, and recreation areas and other Federal public lands) on infrastructure primarily *owned (or maintained) by the Federal Government*.

Federal Lands Access Program (FLAP) –\$297 million for projects that improve multimodal transportation on roads, bridges, trails, transit systems, and other transportation facilities that *access* the Federal estate on infrastructure *owned (or maintained) by States, local governments, or Tribes*, with an emphasis on high-use Federal recreation sites or Federal economic generators.

Tribal Transportation Program (TTP) –\$602 million for projects to provide safe and adequate multimodal transportation and public road access to and within Indian reservations, Tribal lands, and Alaska Native Village communities. The TTP contributes to the economic development, self-determination, and employment of federally recognized Tribes and Native Americans.

Nationally Significant Federal Lands and Tribal Projects Program (NSFLTTP) – \$55 million for the construction, reconstruction, and rehabilitation of nationally significant projects within, adjacent to, or accessing Federal and Tribal lands.

What benefits will be provided to the American public through this request and why is this program necessary?

These programs support safe, seamless, equitable, and multimodal transportation access to and within Federal and Tribal lands which represent nearly 32 percent of the Nation’s land area. Rural areas benefit greatly from these programs as many rural townships’ local economies, adjacent to national parks, forests, and other Federal and Tribal lands, are fueled by recreational opportunities within the Federal estate. In addition to recreational uses, these lands support the economy and communities in energy generation, resource extraction, agriculture, and tourism, among other uses. A reliable and safe surface transportation infrastructure that provides access to these areas is critically important to sustaining and growing jobs in these areas.

Detailed Justification Federal Lands Transportation Program

What is the request and what funds are currently spent on the program?

FY 2024 – Federal Lands Transportation Program (\$439 million) (\$000)

Program	FY 2022 Actual	FY 2023 Enacted	FY 2024 Request
Federal Lands and Tribal Transportation Programs			
Federal Lands Transportation Program	421,965	429,965	438,965
Federal Lands Access Program	285,975	291,975	296,975
Tribal Transportation Program	578,460	589,960	602,460
Nationally Significant Federal Lands and Tribal Projects	130,000	95,000	55,000
Total	1,416,400	1,406,900	1,393,400

What is this program and what does this funding level support?

The Federal Government owns approximately 30 percent of the land in the United States. The Federal Lands Transportation Program (FLTP) invests in the Nation’s infrastructure and supports critical transportation needs within the country’s transportation network by providing access *within* the national parks, forests, wildlife refuges, recreation areas, and other Federal public lands. These Federal public lands are found across the Nation’s rural and urban areas.

Of these funds:

- The FLTP partners – National Park Service (NPS), Fish and Wildlife Service (FWS), and Forest Service (FS) – are provided approximately \$408 million. Of the authorized amount:
 - \$346 million is authorized for the National Park Service;
 - \$36 million is authorized for the Fish and Wildlife Service; and
 - \$26 million is authorized for the Forest Service.
- FHWA will allocate \$31 million equally among four other eligible recipients including the Bureau of Land Management (BLM), Bureau of Reclamation (BOR), U.S. Army Corps of Engineers (USACE), and the Presidio Trust.

- FHWA will reserve a percentage of the funding, not to exceed twenty percent, for integrated transportation planning between FLMAs and State Departments of Transportation (SDOTs) which includes the following activities: long range transportation planning, bridge inspections, collection of road and bridge inventory and condition data and management, and cooperative research and technology deployment. This set-aside supports comprehensive multi-agency planning efforts and positions the program to more effectively support economic growth, safety, connectivity to under-served communities, and climate change initiatives.

The FLTP funding provides an effective mechanism to leverage resources from other Federal and non-Federal funding sources. The Federal funding is sometimes pooled with other State and/or county funds to deliver a single project consisting of multiple owners. This saves taxpayers' dollars and expedites project delivery through a single acquisition.

Each eligible Federal agency submits a single investment plan which describes how it intends to use the funds. Each proposed investment plan is required to demonstrate how it supports authorizing legislation, including the Secretary of Transportation's goals and principles and how it supports the resource and asset management goals of the Secretary of the respective FLMA. These goals and principles include those that:

- improve the condition, resilience and safety of road and bridge assets consistent with asset management plans (including investing in preservation of those assets);
- promote and improve safety for all road users, particularly vulnerable users;
- make streets and other transportation facilities accessible to all users and compliant with the Americans with Disabilities Act;
- address environmental impacts ranging from stormwater runoff to greenhouse gas emissions;
- prioritize investment in infrastructure that is less vulnerable and more resilient to a changing climate;
- future-proof our Nation's transportation infrastructure by accommodating new and emerging technologies like electric vehicle charging stations, renewable energy generation, and broadband deployment in transportation rights-of-way;
- reconnect communities and reflect the inclusion of disadvantaged and under-represented groups in the planning, project selection, and design process; and
- direct Federal funds to their most efficient and effective use, consistent with these objectives.

Based on data reported from these seven FLMAs, this program can support the combined transportation infrastructure across the Federal estate:

- Over \$21.8 billion in deferred maintenance needs;
- Over 380,000 miles of roads open to the public;
- Over 11,000 vehicle bridges and over 8,500 trail bridges;
- Over 190,000 miles of trails;
- Over 1,400 transit systems;
- Jurisdiction of over 1 billion acres; and

- Over 865 million annual visitors across all 50 States.

The FLTP supports and improves safety. FLMAs are required to report on the condition of their roads and bridges in their official National Federal Lands Transportation Inventory. Safety features are promoted according to their crash reduction factor to maximize safety.

The FLTP fosters innovation in transportation and transportation technologies. Projects are evaluated for compatibility with FHWA's Every Day Counts initiative, as well as other innovation deployment priorities that will improve infrastructure performance and investment. These innovation efforts identify and rapidly deploy proven, yet underutilized, innovations to shorten the project delivery process, enhance roadway safety, reduce traffic congestion, enhance the life of infrastructure, and integrate automation.

What benefits will be provided to the American public through this request and why is this program necessary?

The FLTP supports the Secretary's priorities by ensuring that roads and bridges on Federal lands are safe, well-maintained, equitable, and accessible to all. FLTP outcomes include completed infrastructure projects that provide safe, seamless, multimodal access on Federal lands thereby supporting increased visitation, improved transportation infrastructure safety, condition, and reduced congestion; development of transportation inventories and plans that support informed decision-making and policymaking; and research and innovation development and deployment. These outcomes help expand economic development and create new jobs in and around rural and urban Federal lands that contribute to the local, regional, and national economies.

FLTP projects are implemented by FHWA and FLMAs. FHWA anticipates the following project accomplishments:

- Improve over 550 lane miles of roadways on Federal lands;
- Enhance safety through innovation deployments on projects;
- Repair and replace over 55 bridges to improve safety and mobility;
- Invest in at least 12 transit systems; and
- Advance 3 National Transportation Plans: USACE, BLM, and FS.

The following examples illustrate how the American public benefits from FLTP-funded projects.

- The Kennedy Center Pedestrian/Bicycle Trail Pedestrian Tunnel Access and Safety Improvements, and Rock Creek and Potomac Parkway (Route 16) Rehabilitation project aims to improve access from the Rock Creek Park to the Kennedy Center and ultimately to the National Mall. The project aligns with Complete Street Principles and includes:
 - Safe crossings to include curb cuts, pedestrian signals, crosswalks (striping or raised), and implement solutions for providing a message (awareness) to drivers about the mixed user environment that includes pedestrians and bicyclists, that fits with the context of the area, with the potential of slowing driver speeds.

- An esplanade along the Potomac River that will reimagine the space and will include landscaping, bike trail improvements, signage, lighting, benches, trash cans, bike racks, and improvements to the railings along the river's edge.
- The rehabilitation and realignment of Marshland Road (Route 100) and Entrance Road (Route 010) within the Trempealeau National Wildlife Refuge (the Refuge) in Wisconsin aims to improve access to the Refuge and, simultaneously, make this infrastructure more resilient to weather events. This project will improve drainage and environmental resiliency by stabilizing the dike, making improvements to the Entrance Road, and re-aligning Marshland Road to provide continuous, safe, all-weather access to the Refuge.

Detailed Justification Federal Lands Access Program

What is the request and what funds are currently spent on the program?

FY 2024 – Federal Lands Access Program (\$297 million) (\$000)

Program	FY 2022 Actual	FY 2023 Enacted	FY 2024 Request
Federal Lands and Tribal Transportation Programs			
Federal Lands Transportation Program	421,965	429,965	438,965
Federal Lands Access Program	285,975	291,975	296,975
Tribal Transportation Program	578,460	589,960	602,460
Nationally Significant Federal Lands and Tribal Projects	130,000	95,000	55,000
Total	1,416,400	1,406,900	1,393,400

What is this program and what does this funding level support?

The Federal Lands Access Program (FLAP) invests in the Nation’s infrastructure by funding and supporting transportation facilities owned (or maintained) by State, county, local, and Tribal governments, which provide access to lands owned and operated by the Federal Government, e.g., national parks, forests, refuges, national recreation areas, which are primarily rural in nature. FLAP (23 U.S.C. 204) and the FLTP (23 U.S.C. 203) are separate yet complementary programs that support seamless transportation access to and through Federal lands open to the public.

To promote efficient and effective access to destination points within the Federal estate, it is vitally important that the local, State, and non-Federally owned roads that connect with Federal Lands Transportation facilities, just outside a park or forest boundary, for example, are in safe and good condition so the traveling public can seamlessly access these Federal properties and enjoy the recreational and other opportunities therein.

Frequently, the local, State, and non-Federally owned roads for accessing Federal lands are lower classification roads that generally have lower State and local priority, as well as limited eligibility under the Federal-aid highway program. Prior to the authorization of FLAP, many of these important local, State, and non-Federally-owned roads fell into a state of disrepair due to constrained transportation resources. FLAP addresses this gap and is intended to complement the FLTP.

Critical funding resources are made available to those local, State, and non-Federally-owned transportation facilities that provide access to the high-use Federal recreational areas or Federal economic generators within the Federal estate, with the opportunity to produce the greatest return on investment to landowners, communities adjacent to Federal lands, and the American people, who are looking for seamless transportation to these popular recreational destinations.

The structure and allocation of the \$297 million FLAP is a formula distribution by State. Since all States have Federal lands of some type, each State benefits from some portion of this funding. The formula criteria include visitation to Federal lands, Federal public road miles, number of Federal bridges, and the amount of Federal public lands within each State. Further, 80 percent of the funds are directed towards the 12 western States with at least 1.5 percent of total Federal lands: Alaska, Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming. The remaining 38 States, Washington D.C., and Puerto Rico receive the remaining 20 percent of the funds.

The selection of projects in each State is made locally by a Programming Decisions Committee comprised of representatives from the State DOT, FHWA, and a local public agency. These decisions are made in coordination with FLMAs with an emphasis on improving safety and investing in the Nation's infrastructure. Funds are available for transportation infrastructure, owned (or maintained) by States, Tribes, or local public agencies, on improvement projects which support the Secretary of Transportation's goals and principles and provide critical access to Federal lands. These goals and principles include those that:

- improve the condition, resilience and safety of road and bridge assets consistent with asset management plans (including investing in preservation of those assets);
- promote and improve safety for all road users, particularly vulnerable users;
- make streets and other transportation facilities accessible to all users and compliant with the Americans with Disabilities Act;
- address environmental impacts ranging from stormwater runoff to greenhouse gas emissions;
- prioritize investment in infrastructure that is less vulnerable and more resilient to a changing climate;
- future-proof our transportation infrastructure by accommodating new and emerging technologies like electric vehicle charging stations, renewable energy generation, and broadband deployment in transportation rights-of-way;
- reconnect communities and reflect the inclusion of disadvantaged and under-represented groups in the planning, project selection and design process; and
- direct Federal funds to their most efficient and effective use, consistent with these objectives.

FLAP funds are commonly pooled with other Federal and non-Federal funding sources and serve as an effective mechanism for leveraging taxpayers' dollars in rural America. Through funding flexibilities in current law, and when coupled with integrated transportation planning between FLMAs and States, projects that otherwise may have been constructed separately can be combined into a single project and be delivered in a cost-effective and time-efficient manner.

FLAP will reserve a percentage of the funding, not to exceed twenty percent, for integrated transportation planning between FLMAs and SDOTs, which includes the following activities: long-range transportation planning, bridge inspections, collection of road and bridge inventory and condition data management, and cooperative research and technology deployment. This set-aside supports comprehensive, multi-agency planning efforts and positions that address the Administration's priorities of economic growth, safety, connectivity to under-served communities, and climate change.

What benefits will be provided to the American public through this request and why is this program necessary?

The FLAP supports the Secretary's priorities by ensuring that roads and bridges providing access to Federal lands are safe, well-maintained, and accessible to all. FLAP projects provide safe, seamless, and multimodal access to and through Federal lands which expands economic development and creates new jobs in and around Federal lands. Collectively, they improve the quality of life for all Americans by improving the condition, resilience and safety of road and bridge assets, promoting, and improving safety for all road users, connecting communities, addressing environmental impacts, and prioritizing infrastructure that is more resilient to climate change in and around our national treasures. In addition, Transportation investments stemming from FLAP allow visitors to experience America's treasures in a safe and seamless manner.

The FLAP funding projects are implemented by FHWA, SDOTs, and local governments, among others. FHWA anticipates the following project accomplishments with these funds:

- Improve over 70 lane miles of roadways accessing Federal lands;
- Improve safety through use of innovations and design;
- Repair and replace over 6 bridges to improve safety and mobility; and
- Improve over 17 miles of trails.

The following examples illustrate how the American public benefits from FLAP-funded projects:

- A FLAP project near Denver, Colorado expands multi-modal access to and through the Rocky Mountain Arsenal National Wildlife Refuge (NWR) by constructing 9 miles of new trails and constructing and improving 12 trailheads for the Refuge. Rocky Mountain Arsenal NWR is one of the country's largest urban refuges, located 10 miles northeast of Denver, in Commerce City and Adams County. During the Refuge's master planning process, one of the key issues identified was the lack of adequate pedestrian and bicycle access to, and through, the Refuge. In response, the Refuge worked closely with its local partners to identify and develop specific projects for improvement.
- A FLAP project near Amarillo, Texas will create public access to the Bureau of Land Management Cross Bar Special Recreation Management Area (SRMA). Currently there is no safe, reliable, and permanent access to the property. The Cross Bar SRMA is land locked and surrounded by private land and bounded on the north by the Canadian River. The only way the public can currently access the Cross Bar for recreation is by crossing private land, then traversing potentially dangerous conditions along the south bank of the Canadian River. This project will address these safety concerns through the construction

of 2.1 miles of new gravel road, including grading, reinforced soil slope construction, guardrail, drainage, as well as reinforced concrete box culvert installation to provide safe, reliable, and permanent access to the Cross Bar SRMA.

Detailed Justification Tribal Transportation Program

What is the request and what funds are currently spent on the program?

FY 2024 – Tribal Transportation Program (\$602 million) (\$000)

Program	FY 2022 Actual	FY 2023 Enacted	FY 2024 Request
Federal Lands and Tribal Transportation Programs			
Federal Lands Transportation Program	421,965	429,965	438,965
Federal Lands Access Program	285,975	291,975	296,975
Tribal Transportation Program	578,460	589,960	602,460
Nationally Significant Federal Lands and Tribal Projects	130,000	95,000	55,000
Total	1,416,400	1,406,900	1,393,400

What is this program and what does this funding level support?

The Tribal Transportation Program (TTP) promotes a coordinated approach to multimodal transportation in Indian country on roads owned by the Bureau of Indian Affairs (BIA), sovereign federally recognized Tribal governments, and other roads owned by States, counties, or local governments which provide access to, or are located within, Tribal communities. TTP funds are eligible for transportation planning, research, maintenance, engineering, rehabilitation, and construction of roads, bridges, trails, transit systems, and other transportation facilities on the National Tribal Transportation Facility Inventory (NTTFI).

The requested \$602 million for FY 2024 will support a comprehensive, coordinated, and goal-oriented approach to Tribal transportation infrastructure management. As of February 2023, Tribes recorded approximately 156,141 miles of roads on the NTTFI. Approximately 29,623 miles are identified as BIA routes and another 20,153 miles as Tribal routes. The remaining mileage is owned by others including States, counties, townships, boroughs, or other Federal agencies. Funding the TTP at the requested amount is necessary to invest in the Nation’s infrastructure, support and improve safety, and provide mobility and access for these communities.

Motor vehicle crashes leave an indelible mark on virtually every community. Traveling our national roadways network by car, truck, motorcycle, bicycle, or as a pedestrian, is a daily requirement for a large segment of the population, from infants to grandparents. This is especially true for the Native American and Alaska Native populations of our country who

experience higher rates of fatal injuries associated with transportation than does the general population.

The structure and allocation of the \$602 million to the 574 federally recognized Tribes is based on a statutory formula that was established in MAP-21 and carried forward in the FAST Act and IIJA. The statutory funding formula has various factors and takedowns, including four set-asides described below, that determine a “tribal share percentage” for each federally recognized Tribe. This percentage is applied to the year’s available program funding to calculate each Tribe’s share of TTP funding for that year. Below are descriptions of the four set-asides in the TTP:

The **Tribal Transportation Program Safety Fund (TTPSF)** is a four percent set-aside that supports data driven safety priorities identified by Tribes. The intent of the TTPSF is to prevent and reduce deaths or serious injuries in transportation-related crashes on Tribal lands. The TTPSF emphasizes the development of strategic transportation safety plans using a data-driven approach to target transportation safety needs in Tribal communities. TTPSF places an emphasis on crash data collection and analysis. Ultimately, planning and data analysis leads to the implementation of infrastructure and non-infrastructure projects that improve transportation safety using both TTP funds and funding leveraged from other sources.

Since TTPSF was created under MAP-21, FHWA has awarded over \$100 million to federally recognized Tribes for 858 projects to address transportation safety issues in Tribal areas over 9 rounds of competitive grants for projects supporting the development of safety plans, data assessment, improvement, and analysis activities, and infrastructure improvements. TTPSF awards under IIJA promote equitable distribution of funding to Tribal areas that have historically been overlooked by many safety analyses due to various factors, including underreporting of crashes. Many of the projects will strengthen local economies by generating job opportunities in economically disadvantaged communities.

In February 2023, FHWA announced that 70 Tribes will receive approximately \$21 million in grants for 93 projects that improve road safety on Tribal lands. The funding is provided directly to Tribes for a range of projects, including the development of safety plans, data analysis activities, pedestrian infrastructure improvements, roadway departure countermeasures, intersection safety, visibility and traffic calming. Per USDOT’s National Roadway Safety Strategy (NRSS), people who are American Indian and Alaska Native have roadway fatality rates more than double the national rate on a per population basis. Addressing this issue is one of the goals of the NRSS.

The **Tribal Transportation Program High Priority Projects (TTPHPP)** is a new, \$9 million set-aside that directly supports underserved communities and racial equity as envisioned in Executive Order 13985: *Advancing Racial Equity and Support for Underserved Communities Through the Federal Government*. TTPHPP provides funds for an Indian Tribe to complete their highest priority project when their annual allocation of TTP funding is insufficient, or for any Indian Tribe that has an emergency or disaster affecting a transportation facility in the National Tribal Transportation Facility Inventory.

A similar set-aside from the Indian Reservations Roads Program was established through negotiated rulemaking under the Transportation Equity Act for the 21st Century. The resulting regulations at 25 CFR 170 directed the administration of the program from 2005 to 2012. In 2012, \$28,533,502 was awarded to Tribes for delivery of 37 high priority projects. The program was authorized but not funded under MAP-21, and it was not authorized under the FAST Act.

Transportation Planning is a two percent set-aside for each Tribe to carry out transportation planning activities through a cooperative process that fosters involvement by all users of the transportation system. The purpose of transportation planning is to evaluate a wide range of alternatives to address a Tribe's multi-modal transportation needs, to develop short, mid-, and long-term strategies to meet transportation needs, and to support these strategies by defining future policies, goals, and investments. These strategies are developed through a comprehensive approach to analyzing how current and future land use, economic development, traffic demand, public safety, health, and social needs impact the Tribes' transportation system.

Program Management and Oversight (PM&O) is a five percent set-aside for administration of the program. The PM&O set-aside provides funding for payroll, office space, office supplies, travel, and for carrying out the stewardship and oversight and the inherent Federal functions/responsibilities of the TTP. These inherent Federal functions include fund distribution, environmental documentation review and approval, project construction inspection, financial management, and program reviews. PM&O funding also supports IT support and equipment, maintenance of the National Tribal Transportation Facility Inventory (NTTFI), and other special TTP-specific and required studies, and technical assistance. Technical assistance activities include funding the Tribal Technical Assistance Program (TTAP), outreach on Tribal government recreation travel and tourism activities, and bridge inspections on the Tribal and BIA bridges across the country. The FHWA retains approximately 18 percent of the overall PM&O budget to fund program administration for 23 full time employees with the balance of funds going to the BIA.

What benefits will be provided to the American public through this request and why is this program necessary?

The TTP supports the Secretary's priorities by improving transportation safety, access, and mobility in Tribal communities. This program provides better and more equitable access to housing, emergency services, schools, stores, jobs, and medical services, among others, and improves the quality of life on Tribal lands for all the 574 federally recognized sovereign Tribal governments. More than 8 billion vehicle miles are traveled annually on the NTTFI system, despite more than 60 percent of the system being unpaved.

These roads, trails, bridges, transit systems, and other transportation facilities provide safe and adequate transportation for public access to, within, and through Indian reservations and native communities for Native Americans, visitors, recreational users, resource users, and others, while contributing to the health, safety, and economic development of Native American communities.

The TTP is focused on improving transportation infrastructure in Indian Country, but many TTP projects also address community health, livability, sustainability, transportation alternatives, and mitigating climate change. The anticipated FY 2024 accomplishments will include significant

improvements in safety, infrastructure, planning, and transportation capacity building and will continue to support more equitable access to resources that address transportation infrastructure needs in Indian Country.

The design and construction of Tribal transportation infrastructure consistent with strategic long-range transportation plans and goals of the Tribes and DOT, will considerably benefit facilities included in the NTTFI. Further, the development of data-driven transportation safety plans that will lead to investment decision-making that prevents and/or significantly reduces fatalities and serious injuries. Technical assistance and training will be provided to Tribes by FHWA and BIA to support Tribal transportation capacity building, foster innovation in transportation and transportation technologies, while providing stewardship and oversight of programs and priorities.

Detailed Justification
Nationally Significant Federal Lands and Tribal Projects Program

What is the request and what funds are currently spent on the program?

FY 2024 – Nationally Significant Federal Lands and Tribal Projects Program
(\$55 million)

(\$000)

Program	FY 2022 Actual	FY 2023 Enacted	FY 2024 Request
Federal Lands and Tribal Transportation Programs			
Federal Lands Transportation Program	421,965	429,965	438,965
Federal Lands Access Program	285,975	291,975	296,975
Tribal Transportation Program	578,460	589,960	602,460
Nationally Significant Federal Lands and Tribal Projects	130,000	95,000	55,000
Total	1,416,400	1,406,900	1,393,400

What is this program and what does this funding level support?

The Nationally Significant Federal Lands and Tribal Projects (NSFLTP) Program provides funding for the construction, reconstruction, and rehabilitation of nationally significant projects within, adjacent to, or accessing Federal and tribal lands. This Program provides an opportunity to address significant challenges across the Nation for transportation facilities that serve Federal and tribal lands. Federal land management agencies, federally recognized Indian Tribes, States, and local agencies are eligible applicants.

The NSFLTP Program provides discretionary grants for projects that have an estimated construction cost of at least \$12.5 million. Half of the funding provided must be awarded to projects on Tribal lands and half must be awarded to projects on Federal lands. FHWA will consider criteria established under section 1123 of the FAST Act, in addition to the Secretary’s safety, equity and other policy objectives, in rating all applications for funding under the NSFLTP Program.

Grants from the NSFLTP Program are in high demand among eligible recipients. FHWA has experienced a steady rise in grant application requests in recent years and anticipates such requests for the NSFLTP Program to exceed \$900 million in FY 2024. Grant application requests far exceeding the available funding reinforces the value and need for this program.

What benefits will be provided to the American public through this request and why is this program necessary?

The NSFLTP Program provides a reliable source of funding for major, high-cost projects that typically cannot be funded with other funding sources due to the scope and expense of the project. This program complements both the Federal Lands Transportation and Access programs along with the Tribal Transportation Program by funding a small number of critical projects annually that require significant investments. Prior to the authorization of this program, these large, nationally significant projects were rarely funded.

This program provides the American people with safe, multi-modal access to Federal and Tribal lands and addresses this former funding gap. Through effective transportation access to Federal lands, visitors can enjoy the recreational opportunities within these Federal estates. In doing so, they are contributing significantly to economic generation in rural America, particularly the small businesses that operate just outside Federal lands within gateway communities across the country.

These significant transportation facilities also support access to clean energy sources, such as wind and solar farms on Federal lands, and frequently benefit transportation access in addition to conservation initiatives. An example is the selection of a project in Zion National Park that will result in the replacement of an aged, fossil fuel burning bus fleet with clean energy buses including electric vehicle charging stations. This award addressed local park congestion while also yielding a significant environmental, clean air benefit for visitors and surrounding communities.

As noted, half of the authorized program is directed toward Tribal transportation facilities that provide access to critical community services within and to Indian country including schools, hospitals, and other vital community services. In August 2022, FHWA announced \$125 million in new funding for the Nationally Significant Federal Lands and Tribal Projects Program. Recent grant awards include \$46 million to the Native Village of Eyak in Alaska for the construction of a highway, dock support facilities, and a boat ramp at the Shepard Point Oil Spill Response Facility. The funding will support a highway extension that will connect the existing road systems near Cordova, AK, to a deep-draft dock, a small boat launch ramp, 3.5-acre pad, and uplands facilities at Shepard Point. This grant will help the Native Village of Eyak and surrounding communities respond to oil spills and other emergencies more effectively.

This Page Left Blank Intentionally

Executive Summary

Active Transportation Infrastructure Investment Program

What is the request and what funds are currently spent on the program?

The FY 2024 budget requests to repurpose \$60 million in unused Transportation Infrastructure Finance and Innovation Act (TIFIA) Program funding to the Active Transportation Infrastructure Investment Program (ATIIP). The ATIIP was authorized in the Infrastructure Investment and Jobs Act (IIJA) as subject to General Fund Appropriation. Funding for the ATIIP in the amount of \$45 million was appropriated in FY 2023.

What is this program and what does this funding level support?

The ATIIP supports planning and active transportation implementation (mobility options powered primarily by human energy, including bicycling and walking) at the network scale, rather than on a project-by-project basis. The ATIIP awards competitive grants to plan, design, and construct networks of safe and connected active transportation facilities that connect between destinations within a community or metropolitan region. Additionally, grants may fund projects to plan, design, and construct an active transportation spine, a facility that connects between communities, metropolitan regions, or States.

What benefits will be provided to the American public through this request and why is this program necessary?

Many communities are currently experiencing negative safety, climate, health, and equity impacts from a transportation network that does not provide safe, comfortable, and direct connections by walking or bicycling. ATIIP grants would allow communities to identify, prioritize, and implement improvements to the largest barriers to safe, accessible, and equitable pedestrian and bicycle network connectivity.

This request supports the Secretary's key priorities of equity, safety, and transformation. The ATIIP supports *Equity* by providing historically underserved communities the opportunity to improve their walking and bicycling network, thus mitigating the disproportionate safety risks and improving the quality of two of the most cost-effective, healthy and sustainable transportation modes. *Safety* can be promoted by focusing improvements on the network scale, rather than a specific location or single corridor. This approach operationalizes Complete Streets as part of the Safe System Approach. *Transformation* and *Climate* goals are supported when nonmotorized networks are free of accessibility barriers for people with disabilities, support travel by innovative new micromobility modes, are connected to transit facilities and multimodal hubs, and enable complete trips for anyone without a car.

Detailed Justification

Active Transportation Infrastructure Investment Program

What is the request and what funds are currently spent on the program?

FY 2024 – Active Transportation Infrastructure Investment Program (\$60 million through repurposed unused TIFIA funds)
(\$000)

Program	FY 2022 Actual	FY 2023 Enacted	FY 2024 Request
Active Transportation Infrastructure Investment Program	0	45,000	[60,000]
Total	0	45,000	[60,000]

What is this program and what does this funding level support?

The Active Transportation Infrastructure Investment Program (ATIIP) awards competitive grants to eligible organizations (a local or regional governmental organization, planning organization or council; a multicounty special district; a State; a multistate group of governments; or Tribes) to plan, design, and construct networks of safe and connected active transportation facilities that connect between destinations within a community or metropolitan region. Additionally, the program may fund projects to plan, design, and construct an active transportation spine, a facility that connects between communities, metropolitan regions, or States.

The ATIIP was authorized in the IJA as subject to General Fund appropriation. The Budget proposes to repurpose \$60 million in unused TIFIA Program funding to fund the ATIIP. Through the ATIIP, \$60 million of this unused funding will support communities in connecting people with public transportation, businesses, workplaces, schools, residences, recreation areas, and other activity centers.

The ATIIP supports the planning and design of active transportation networks and spines (not less than \$3 million per fiscal year) and the costs of administration, research, technical assistance, communications, and training activities (not more than \$2 million per fiscal year). The ATIIP also supports the construction of active transportation networks (not less than 30 percent of funding made available) and the construction of active transportation spines (not less than 30 percent of funding made available).

Grants may be awarded at up to 80 percent Federal share. Projects serving communities with a poverty rate over 40 percent (based on the majority of census tracts served by the eligible project) may be awarded at up to 100 percent Federal share.

These grants support the following activities:

- Planning of walking and bicycling facility networks;

- Connectivity analysis of active transportation networks;
- Asset inventory of walking and bicycling facilities, including compliance with the Americans with Disabilities Act;
- Data collection of walking and bicycling volume, route choices, crashes, and other data necessary for measuring performance;
- Project prioritization activities for walking and bicycling facilities;
- Design and construction of walking and bicycling facilities at a network scale; and
- Evaluation and performance measurement of resulting networks.

These grants also support technical assistance and research, such as:

- Technical assistance in conducting multimodal network connectivity analysis;
- Technical assistance in collection of walking and bicycling data;
- Research in estimating levels of comfort with facility types, and forecasting levels of participation in active transportation;
- Evaluation of rates of participation in walking and bicycling as a result of network-scale investments; and
- Estimation of benefits that result from network-scale investments.

What benefits will be provided to the American public through this request and why is this program necessary?

Funding awarded through ATIP will allow communities to plan and implement improvements to active transportation at a network scale, similar to Nonmotorized Transportation Pilot Program (NTPP) communities. Many communities are currently experiencing negative safety, climate, health, and equity impacts of a transportation network that does not provide safe, comfortable, and direct connections by walking or bicycling. Research has consistently shown that communities experience the greatest increases in walking and bicycling participation and safety when facilities are planned and implemented as a network. These grants would allow communities to identify, prioritize, and implement improvements to the largest barriers to safe, accessible, and equitable pedestrian and bicycle network connectivity.

Proof of concept was demonstrated through the NTPP, a pilot authorized by the Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users. The NTPP provided grants of \$25 million each to four communities from 2005 through 2009. Through 2013, NTPP projects delivered transportation mode shifts toward walking and bicycling, and associated improvements to access and mobility, safety, and public health, and environmental impacts and energy consumption. The four pilot communities observed an estimated 22.8 percent increase in the number of walking trips and an estimated 48.3 percent increase in the number of bicycling trips, as described in the NTPP 2014 Report to Congress. The success of this pilot demonstrates the potential for achieving improvements in transportation equity and successful climate outcomes through the ATIP.

Executive Summary

Bridge Investment Program

What is the request and what funds are currently spent on the program?

The FY 2024 budget includes \$2.50 billion for a discretionary grant program to assist eligible entities in replacing, rehabilitating, preserving, or protecting highway bridges, including replacing or rehabilitating bridge-size culverts. The IJA provided \$2.45 billion and \$2.49 billion for the Bridge Investment Program in FY 2022 and FY 2023, respectively. This program receives \$1.85 billion from the General Fund in each of FY 2022, FY 2023, and FY 2024 through advance supplemental appropriations. Additionally, this program receives \$600 million, \$640 million, and \$650 million from the Highway Trust Fund in FY 2022, FY 2023, and FY 2024, respectively.

What is this program and what does this funding level support?

The Bridge Investment Program complements the Bridge Formula Program, also created by IJA, to increase investment in bridges that carry public roads and supports the Secretary's priorities of safety, transportation equity, addressing climate change and resilience, improving core assets, and transforming our Nation's transportation infrastructure. This program allows States, Metropolitan Planning Organizations, local governments, Federal land management agencies, Tribal governments, and other eligible entities to apply for funding to complete projects that improve the safety, efficiency, and reliability of the movement of people and freight over bridges and improve the condition of bridges. Additionally, the financial assistance provided by the program leverages and encourages non-Federal contributions from sponsors and stakeholders.

What benefits will be provided to the American public through this request and why is this program necessary?

This program creates opportunities for all levels of government to fund highway bridge projects while leveraging Federal funding. It offers States, Metropolitan Planning Organizations, local governments, Federal land management agencies, Tribal governments, and other eligible entities an ability to advance both large and other than large bridge projects. Projects funded by this program will fix our aging highway bridges, thereby enhancing the safety, capacity, and connectivity of our Nation's transportation infrastructure.

Detailed Justification Bridge Investment Program

What is the request and what funds are currently spent on the program?

FY 2024 – Bridge Investment Program (\$2.50 billion)			
(\$000)			
Program	FY 2022 Actual	FY 2023 Enacted	FY 2024 Request
Bridge Investment Program	2,447,000	2,487,000	2,497,000
Total	2,447,000	2,487,000	2,497,000

What is this program and what does this funding level support?

The Bridge Investment Program is a discretionary grant program that provides financial assistance to States, Metropolitan Planning Organizations, local governments, political subdivisions of a State or local government, special purpose districts or public authorities with transportation function, Federal land management agencies, and Tribal governments to complete highway bridge projects that align with the program’s statutory goals to:

- Improve the safety, efficiency, and reliability of the movement of people and freight over bridges.
- Improve the condition of bridges by reducing:
 - The number of bridges in poor condition or in fair condition and at risk of falling into poor condition within the next 3 years;
 - The total person miles traveled over bridges in poor condition or in fair condition and at risk of falling into poor condition within the next 3 years;
 - The number of bridges that do not meet current geometric design standards or cannot meet the load and traffic requirements typical of the regional transportation network; and
 - The total person miles traveled over bridges that do not meet current geometric design standards or cannot meet the load and traffic requirements typical of the regional transportation network.
- Provide financial assistance that leverages and encourages non-Federal contributions from sponsors and stakeholders.

The FY 2024 budget request of \$2.50 billion for this program will provide competitive grants for planning, feasibility analysis, and revenue forecasting associated with an application for Bridge Investment Program funding, as well as construction grants for two types of projects: Large Bridge Projects (eligible projects with total costs greater than \$100 million); and Bridge Projects. At least 50 percent of program funds made available out of the Highway Trust Fund will be used for Large Bridge Projects, and a portion of funds will be set-aside for Tribal Transportation

Facility Bridge projects. For Large Bridge Projects, the Secretary will submit an annual report to Congress on funding recommendations, based on project evaluations. For Bridge Projects, evaluations will also be used prior to providing a grant. Considerations for project evaluations will be based on statutory requirements and include whether the project:

- Addresses a need to improve the condition of the bridge;
- Generates safety, environmental, or economic benefits, improved movement of freight and people, or cost savings including reduced maintenance costs and costs avoided by the prevention of closure or reduced use of a bridge;
- Is cost effective based on an analysis of whether the benefits and avoided costs are expected to outweigh the project costs;
- Is supported by other Federal or non-Federal financial commitments or revenues adequate to fund ongoing maintenance and preservation; and
- Is consistent with the objectives of an applicable asset management plan.

What benefits will be provided to the American public through this request and why is this program necessary?

Nationally and regionally significant highway bridge projects are often complex, making them difficult to efficiently implement under other Federal and State funding programs. This program creates opportunities for all levels of government to fund highway bridge projects while leveraging Federal funding. It offers States, Metropolitan Planning Organizations, local governments, Federal land management agencies, Tribal governments, and other eligible entities an ability to advance large and smaller highway bridge projects.

This program supplements the other FHWA programs in which highway bridge projects are eligible, such as the Bridge Formula Program, the Surface Transportation Block Grant Program and National Highway Performance Program. Long-term commitments to funding the latter two programs have resulted in the percentage of the deck area of highway bridges classified as in “Poor” condition dropping from 7.3 percent in 2013 to 5.0 percent in 2022 even as the total number of bridges in the Nation's inventory increased from 607,751 to 620,669. With the Bridge Investment Program, additional benefits and improvements to highway bridge conditions are expected. This program is anticipated to have a significant effect on the Nation's aging highway system, as it provides an opportunity to eligible entities an ability to advance both Large Bridge Projects and Bridge Projects. These improvements will contribute to enhancing the safety, capacity, and connectivity of our Nation's transportation infrastructure.

In June 2022, FHWA staff opened a call for applications for the competitive Bridge Investment Program established by the IJA. In September 2022, the program awarded \$2.1 billion to four large bridge projects in five States: the Golden Gate Bridge in the City of San Francisco, Gold Star Memorial Bridge that carries I-95 traffic over the Thames River in Connecticut, the Brent Spence Bridge, which crosses the Ohio River at the Kentucky and Ohio border, and four bascule bridges over the Calumet River on the south side of Chicago. In addition, the program distributed \$20 million in competitive planning grants for 24 projects in 24 States. These planning grants will be used to create a pipeline of future bridge construction projects to improve safety, support economic competitiveness, and to provide resilient highway infrastructure that is better able to withstand the effects of climate change.

This Page Left Blank Intentionally

Executive Summary

Charging and Fueling Infrastructure Grants

What is the request and what funds are currently spent on the program?

The FY 2024 budget includes \$500 million to fund grants for Alternative Fuel Corridors, including a 50 percent set-aside for Community grants. The IJA provided \$300 million and \$400 million for this program in FY 2022 and FY 2023, respectively. This program is funded through the Highway Trust Fund.

What is this program and what does this funding level support?

The Charging and Fueling Infrastructure Grants Program provides grants to support strategic deployment of publicly accessible electric vehicle (EV) charging infrastructure as well as hydrogen, propane and natural gas fueling infrastructure. This grant program complements the National Electric Vehicle Infrastructure (NEVI) formula program, which initially focuses on EV charging infrastructure along Interstates and Alternative Fuel Corridors.

Program funds will be divided between grants for charging and fueling infrastructure along travel corridors and grants for infrastructure in community locations. Fifty percent of total program funds will be made available for charging and fueling infrastructure along designated Alternative Fuel Corridors.

The other 50 percent of the total program funds will be made available each fiscal year for Community Grants to install EV charging and alternative fuel infrastructure in locations on public roads or other publicly accessible locations, such as schools, parks, and in publicly accessible parking facilities owned or managed by a private entity. These Community Grants will be prioritized for rural areas, low-and moderate-income neighborhoods, and communities with low ratios of private parking, or high ratios of multiunit dwellings.

What benefits will be provided to the American public through this request and why is this program necessary?

The discretionary Charging and Fueling Infrastructure Grants Program provides a mechanism to increase access to necessary infrastructure by accelerating EV charging and alternative fuel infrastructure deployments both along travel corridors and in community locations. It reflects the Administration's commitment to combatting climate change and reducing other pollutants by facilitating increased adoption of lower emission vehicles.

The projects funded by this program will support lower-emission charging and fueling infrastructure deployment to meet Administration priorities such as supporting rural communities, building resilient infrastructure, and increasing access in underserved and overburdened communities both along designated Alternative Fuel Corridors and in strategic, publicly accessible locations within communities.

Detailed Justification Charging and Fueling Infrastructure Grants

What is the request and what funds are currently spent on the program?

FY 2024 – Charging and Fueling Infrastructure Grants (\$500 million) (\$000)

Program	FY 2022 Actual	FY 2023 Enacted	FY 2024 Request
Charging and Fueling Infrastructure Grants	300,000	400,000	500,000
Total	300,000	400,000	500,000

What is this program and what does this funding level support?

The Charging and Fueling Infrastructure Grants Program provides grants to support strategic deployment of publicly accessible electric vehicle (EV) charging infrastructure as well as hydrogen, propane and natural gas fueling infrastructure.

Program funds will be divided between grants for charging and fueling along travel corridors and grants for infrastructure in community locations. Fifty percent of total program funds will be made available for charging and fueling infrastructure along designated Alternative Fuel Corridors. The other 50 percent of the total program funds will be made available each fiscal year for Community Grants to install EV charging and alternative fuel infrastructure in locations on public roads or other publicly accessible locations, such as schools, parks, and in publicly accessible parking facilities owned or managed by a private entity. These Community Grants will be prioritized for rural areas, low-and moderate-income neighborhoods, and communities with low ratios of private parking, or high ratios of multiunit dwellings.

Program funding will support grantees through a wide range of project eligibilities to include development phase activities, acquisition/installation, operations support, traffic control devices, and education/community engagement activities. Grantees are also permitted to enter into revenue-sharing agreements with contracted private entities if the revenue is used for purposes otherwise eligible through the program.

The Federal cost-share for a project may not exceed 80 percent. Further, as a condition of contracting with an eligible entity, a private entity must agree to pay the non-Federal share of project costs.

This program directly addresses several of the Secretary’s key priorities. Criteria to assess the Corridor-based charging grant applications will specifically address economic strength and global competitiveness. Corridor-based charging grant applications will be assessed based on how they meet current or anticipated market demands while supporting a long-term competitive

market for charging and fueling infrastructure providers. The Community grant portion of the program addresses equity by specifically prioritizing projects that expand access to lower emission charging and fueling infrastructure within rural areas, low- and moderate-income neighborhoods, and communities with more difficult access to parking.

What benefits will be provided to the American public through this request and why is this program necessary?

By expanding infrastructure which improves access to, or adoption of, lower-and zero-emission vehicles, this program addresses two of the Secretary’s key priorities: climate and sustainability; and the transformation of our existing transportation network into one that meets the future needs of travel and transportation. The transportation sector has become the largest source of U.S. greenhouse gas emissions (GHG). Reducing emissions from transportation through increased adoption of low-emission vehicles is consistent with Executive Order 13990¹², which includes a national policy objective to reduce GHG emissions, and Executive Order 14008¹³, which recommits the U.S. to the Paris Agreement. EVs and alternative fuel vehicles have been identified as cleaner, more equitable, more affordable, and represent an opportunity to support good-paying, union jobs.¹⁴

The Charging and Fueling Infrastructure Grants Program will increase the amount of available low-and zero-emission charging and fueling infrastructure in key locations, thus overcoming a challenge for the American public in accessing charging and fueling infrastructure. The Corridor charging components of the program will strategically deploy publicly accessible EV charging infrastructure and hydrogen, propane, and natural gas fueling infrastructure along designated Alternative Fuel Corridors. The Community grants will strategically deploy publicly accessible EV charging infrastructure and hydrogen, propane, and natural gas fueling infrastructure within communities where people live and work, with a particular focus on community locations where charging and fueling investments would otherwise be unlikely or delayed.

Executive Summary

Congestion Relief Program

What is the request and what funds are currently spent on the program?

The FY 2024 budget includes \$50 million to provide competitive grants to States, local governments, and metropolitan planning organizations (MPOs) to mitigate congestion in the most densely populated metropolitan areas of the United States. The IIJA provided \$50 million for this program in both FY 2022 and FY 2023. This program is funded through the Highway Trust Fund.

What is this program and what does this funding level support?

The Congestion Relief Program provides competitive grants to States, local governments, and MPOs for advancing innovative, integrated, and multimodal solutions to mitigate congestion in the most densely populated metropolitan areas of the United States.

States and MPOs compete for grants to support eligible projects within urbanized areas containing populations of more than one million individuals. Priority is given to eligible projects located in urbanized areas that are experiencing high degrees of recurring congestion.

Eligible projects may include: the deployment and operation of mobility services; integrated congestion management systems; systems that implement or enforce high occupancy vehicle toll lanes, cordon pricing, parking pricing, or congestion pricing; and incentive programs that encourage travelers to carpool or use non-highway travel modes.

In addition, the Congestion Relief Program permits the Secretary to allow the use of tolls on the Interstate System as part of a project carried out with a program grant, subject to certain requirements. The Secretary may approve the use of tolls on the Interstate System under the program in up to ten urbanized areas.

What benefits will be provided to the American public through this request and why is this program necessary?

The goals of the program are to reduce congestion in the most densely populated metropolitan areas of the United States along with the economic, social, and environmental costs associated with that congestion, and to optimize use of the existing highway and transit systems.

Detailed Justification Congestion Relief Program

What is the request and what funds are currently spent on the program?

FY 2024 – Congestion Relief Program (\$50 million) (\$000)

Program	FY 2022 Actual	FY 2023 Enacted	FY 2024 Request
Congestion Relief Program	50,000	50,000	50,000
Total	50,000	50,000	50,000

What is this program and what does this funding level support?

The Congestion Relief Program provides competitive grants to States, local governments, and MPOs for projects in large, urbanized areas to advance innovative, integrated, and multimodal solutions to mitigate congestion in the most densely populated metropolitan areas of the United States. Grants are limited to eligible projects located in urbanized areas containing populations of more than one million. Priority is given to those areas that are experiencing high degrees of recurring congestion. The Federal cost-share will not exceed 80 percent of the total cost of a project.

Funds from a grant under the program may be used for a project or an integrated collection of projects, including planning, design, implementation, and construction activities to achieve program goals. Eligible projects may include: the deployment and operation of mobility services; integrated congestion management systems; systems that implement or enforce high occupancy vehicle toll lanes, cordon pricing, parking pricing, or congestion pricing; and incentive programs that encourage travelers to carpool, to use non-highway travel modes, or to travel during nonpeak periods.

In addition, the Congestion Relief Program permits the Secretary to allow the use of tolls on the Interstate System as part of a project carried out with a program grant, subject to certain requirements. The Secretary may approve the use of tolls on the Interstate System under the program for up to 10 urbanized areas.

The “integrated congestion management systems” supported by the program is defined to mean the integration of management and operations of a regional transportation system, that includes, at a minimum, traffic incident management, work zone management, traffic signal timing, managed lanes, real-time traveler information, and active traffic management. This is intended to maximize the capacity of all facilities and modes across the applicable region.

What benefits will be provided to the American public through this request and why is this program necessary?

The goals of the program are to reduce congestion in the most densely populated metropolitan areas of the United States; to reduce the economic, social, and environmental costs associated with that congestion, including transportation emissions; and to optimize use of existing highway and transit systems.

The program aims to achieve these goals through: improving intermodal integration with highways, highway operations, and highway performance; reducing or shifting highway users to off-peak travel times or to non-highway travel modes during peak travel times; and value pricing.

In addition, projects under the program shall include, if appropriate, an analysis of the potential effects of the project on low-income drivers and may include mitigation measures to deal with any potential adverse financial impacts upon them.

This Page Left Blank Intentionally

Executive Summary

Infrastructure for Rebuilding America

What is the request and what funds are currently spent on the program?

The FY 2024 budget includes \$1.64 billion for a discretionary grant program to support highway and freight projects of national or regional significance. The IIJA provided \$1.64 billion for this program in FY 2022, FY 2023, and FY 2024, comprised of \$1.0 billion and \$640 million from the Highway Trust Fund and the General Fund through advance supplemental appropriations, respectively.

What is this program and what does this funding level support?

The Infrastructure for Rebuilding America (INFRA) discretionary grant program supports the Secretary's priorities by advancing nationally significant multimodal freight and highway projects to improve the safety, efficiency, and reliability of the movement of freight and people.

This program allows States, metropolitan planning organizations, local governments and other eligible entities to apply for funding to complete projects that improve safety, generate economic benefits, reduce congestion, enhance resiliency, and hold the greatest promise to eliminate freight bottlenecks and improve critical freight movements.

The FY 2024 budget request of \$1.64 billion for this program will advance critical highway and bridge projects on the National Highway Freight Network (NHFN) and the National Highway System (NHS) that improve the safe, secure, and efficient movement of people and goods throughout the United States, and improve the national economy. The program also supports freight and highway projects that are multimodal, multi-jurisdictional, complex, or involve partnership with the private sector – projects which are difficult to develop and implement using other Federal and State funding programs.

What benefits will be provided to the American public through this request and why is this program necessary?

This program, which advances nationally significant multimodal freight and highway projects, offers public-sector agencies and their private sector partners a path forward to make real improvements in highway and freight infrastructure and operations that will leverage Federal investment. Projects supported by this program provide public benefits including improved national and regional economic vitality, innovation, and safety in both rural and urban areas.

The Department's approach for implementing INFRA addresses critical issues facing the Nation's highway, bridge, rail, and port infrastructure. Projects already funded by this program are fixing aging infrastructure and providing enhanced safety, capacity, and connectivity for highways and the freight system. This program creates opportunities for all levels of government and the private sector to partner in efforts to fund infrastructure, increasing accountability across a broader range of system providers and operators and leveraging Federal funding. The program also encourages innovative approaches to improve the necessary processes for building significant projects.

Detailed Justification Infrastructure for Rebuilding America

What is the request and what funds are currently spent on the program?

FY 2024 – Infrastructure for Rebuilding America (\$1.64 billion) (\$000)

Program	FY 2022 Actual	FY 2023 Enacted	FY 2024 Request
Infrastructure for Rebuilding America	1,640,000	1,640,000	1,640,000
Total	1,640,000	1,640,000	1,640,000

What is this program and what does this funding level support?

INFRA is a discretionary grant program that provides financial assistance to States, metropolitan planning organizations, Tribal governments, special-purpose districts, multistate corridor organizations and port authorities with a transportation function, and local governments to complete projects that align with the program’s statutory goals to:

- Improve safety, efficiency, and reliability of the movement of freight and people;
- Generate national or regional economic benefits and increase the global economic competitiveness of the U.S.;
- Reduce highway congestion and bottlenecks;
- Improve connectivity between modes of freight transportation;
- Enhance the resiliency of critical highway infrastructure and help protect the environment;
- Improve roadways vital to national energy security; and
- Address the impact of population growth on the movement of people and freight.

FY 2024 funds will be used to make awards that increase the impact of projects by leveraging capital and allowing innovation in the project delivery and permitting processes, including public-private partnerships. INFRA promotes innovative safety solutions that will improve the transportation system. INFRA also targets performance and accountability in project delivery and operations.

The program is anticipated to have a significant effect on the ability of our Nation to meet the growth in freight and passenger demand in a responsible, effective, and safer way. Nationally and regionally significant highway and freight projects are often multimodal, multi-jurisdictional, complex, or involve partnership with the private sector, making them difficult to efficiently implement under other Federal and State funding programs.

What benefits will be provided to the American public through this request and why is this program necessary?

INFRA grants advance projects that support economic growth and make use of project delivery and financing innovations. For example, in FY 2022, the Florida Department of Transportation (FDOT) was awarded an INFRA grant in the amount of \$15 million for the I-4 West Central Florida Truck Parking Facility Project. The project will construct a new truck parking facility with approximately 120 spaces, electric charging stations, and pedestrian infrastructure to access nearby commercial amenities. The truck parking facility will be connected to the FDOT's Truck Parking Availability System to assist commercial vehicle operators in identifying available parking locations and will include at least six electrical hookups to provide stand-by power for refrigerated trucks and auxiliary power for in-cab comforts. This project addresses a shortage in parking for commercial vehicles on a corridor between Tampa and Orlando which carries an average of 18,000 trucks daily and reduces parking in unauthorized areas such as vacant lots or highway shoulders. By providing reliable parking capacity, the project reduces time drivers spend searching for commercial vehicle parking, making supply chain movement more efficient and decreasing commercial vehicle emissions.

Another example of an FY 2022 INFRA project is the I-375 Community Reconnection Project. The Michigan Department of Transportation received an INFRA grant in the amount of \$104.7 million to realign the ramps and freeway near I-375, convert I-375 to a slower speed boulevard, install calming traffic measures, remove weaving and merging areas along I-375 and I-75, remove the Jefferson Avenue curve, and incorporate LED lighting in the project area. The project would also remove fifteen old bridges and two stormwater runoff pump stations, rehabilitate one remaining stormwater runoff pump station, construct wider sidewalks and separated buffered cycle tracks with protected and signalized pedestrian crossings. The project will reconnect the neighborhoods that were divided by the current highway design with an at-grade boulevard, providing the community with better access to jobs and services in the area. The project will reduce operating and maintenance costs for the improved roadway and use innovative technologies for traffic incident management smart technologies at intersections to improve safety.

The necessity of this program is evidenced by the large number of eligible applications and the total dollar amount requested during the solicitations from FY 2016 to FY 2022. In the latest round of the INFRA program for FY 2022, the Department received 251 eligible grant applications requesting more than \$25.5 billion in grant funding, approximately 17 times the awarded amount of \$1.5 billion.

This Page Left Blank Intentionally

Executive Summary

Promoting Resilient Operations for Transformative, Efficient, and Cost-saving Transportation (PROTECT) Discretionary Program

What is the request and what funds are currently spent on the program?

The FY 2024 budget includes \$300 million for competitive grants to eligible entities for activities to assess and address infrastructure vulnerabilities to current and future weather events, including natural disasters and climate change. The IJA provided \$250 million for this program in both FY 2022 and FY 2023. This program is funded through the Highway Trust Fund. The annual appropriations act provided an additional \$250 million in FY 2022 and \$150 million in FY 2023 was provided for this program from the General Fund.

What is this program and what does this funding level support?

The Promoting Resilient Operations for Transformative, Efficient, and Cost-saving Transportation (PROTECT) Discretionary Program complements the PROTECT Formula Program, which is similarly focused on protecting surface transportation assets by making them more resilient to impacts of climate change, current and future weather events, and natural disasters. The program awards competitive grants to States, Metropolitan Planning Organizations, local governments, Tribes, and other recipients for projects in four areas: Planning Grants, Resilience Improvement Grants, Community Resilience and Evacuation Route Grants, and At-Risk Coastal Infrastructure Grants. Eligible PROTECT Discretionary program projects include highways, public transportation facilities, intercity rail passenger transportation, and ports.

What benefits will be provided to the American public through this request and why is this program necessary?

PROTECT Discretionary Program activities will protect surface transportation assets by making them more resilient to impacts of climate change, current and future weather events, and natural disasters. For example, resilience improvements and strategies will allow for the continued operation or rapid recovery of surface transportation systems. Coastal infrastructure will be better protected from the long-term risk of sea level rise. Natural infrastructure can be utilized to protect and enhance surface transportation assets while improving ecosystem conditions.

The PROTECT Discretionary Program directly addresses the Secretary's key priority of Resilience and Addressing Climate Change and will support the U.S. Department of Transportation Climate Action Plan: Revitalizing Efforts to Bolster Adaptation & Increase Resilience. In addition, the PROTECT Discretionary Program advances Executive Order 14008, Tackling the Climate Crisis at Home and Abroad, and will allow the United States to move quickly to improve infrastructure resilience against the impacts of climate change that are already manifested and will continue to intensify according to current trajectories.

Detailed Justification PROTECT Discretionary Program

What is the request and what funds are currently spent on the program?

FY 2024 –PROTECT Discretionary Program (\$300 million) (\$000)

Program	FY 2022 Actual	FY 2023 Enacted	FY 2024 Request
PROTECT Discretionary Grants	500,000	400,000	300,000
Total	500,000	400,000	300,000

What is this program and what does this funding level support?

The PROTECT Discretionary Program awards competitive grants to eligible entities for activities that enable communities to assess and address transportation system vulnerabilities to current and future weather events and other natural disasters and changing conditions due to climate change, including sea level rise. Eligible projects include highway and bridges, public transportation facilities, intercity rail, and port facilities including intermodal connectors.

PROTECT Discretionary Program funds can be used for four types of projects:

- Planning Grants, including projects to develop a resilience improvement plan; resilience planning, predesign, design, or the development of data tools; technical capacity building; and evacuation planning and preparation.
- Resilience Improvement Grants, including projects to improve resilience of existing surface transportation infrastructure to weather events, climate change, wildfires, and other natural disasters; natural or nature-based infrastructure; and flood protection measures, raising or lengthening bridges, or slope stabilization work.
- Community Resilience and Evacuation Routes Grants, including improving evacuation routes to meet future needs, ensuring access to critical destinations, and supporting emergency and recovery activities.
- At-Risk Coastal Infrastructure Grants, including work to make coastal highways and non-rail infrastructure more resilient to flooding, erosion, wave action, storm surge or sea level rise; to improve transportation and public safety; and reduce future maintenance and rebuilding costs. (For these grants, eligible entities are expanded from the Formula Program to include the United States Virgin Islands, Guam, American Samoa, and the Commonwealth of the Northern Mariana Islands.)

Eligible project activities include project development, design, property acquisition, construction/reconstruction and rehabilitation, and environmental mitigation. PROTECT Discretionary Program funds also support planning activities, including systems level assessments of vulnerability to future climate and other natural hazards, and current and long-term planning activities and investments to promote resilience.

What benefits will be provided to the American public through this request and why is this program necessary?

The PROTECT Discretionary Program is the first Federal-aid highways discretionary grant program that focuses work and resources on making the highway system and surface transportation more resilient to natural hazards, including climate change. Dedicated grant funding for resilience projects is needed to ensure that projects are built to withstand current weather impacts, natural disasters, and future changes in climate.

The PROTECT Discretionary Program directly addresses the Secretary's key priority of Resilience and Addressing Climate Change and will support the U.S. Department of Transportation Climate Action Plan: Revitalizing Efforts to Bolster Adaptation & Increase Resilience. In addition, the PROTECT Discretionary Program will advance E.O. 14008 and will allow the United States to move quickly to build resilience against the impacts of climate change that are already manifested and will continue to intensify according to current trajectories.

Projects funded by the PROTECT Discretionary Program will be more resilient to future threats and provide a range of benefits to the public. While coastal highways are exposed to storm surge, sea level rise and high tide flooding, inland areas are also vulnerable to future changes in climate such as flooding made worse by stronger and more frequent precipitation events, heat waves that can damage pavements, and wildfires followed by rain events that can cause landslides. Resilience improvements and improved routes to support evacuations and relief efforts after events, for example, will improve the safety of the traveling public and our communities, support freight movements, and facilitate economic growth. The PROTECT Discretionary Programs also supports improved regional planning, programming, and project level analysis that address future risks, not just historical risks, to ensure that communities can minimize life cycle costs and maximize benefits resulting from building, operating and maintaining transportation systems.

Climate change presents a significant and growing risk to the safety, effectiveness, equity and sustainability of our transportation infrastructure and the communities it serves. The Protect Discretionary Program will support projects to address the climate change crisis, thereby making our transportation more resilient to climate change impacts.

This Page Left Blank Intentionally

Executive Summary

Reduction of Truck Emissions at Port Facilities

What is the request and what funds are currently spent on the program?

The FY 2024 budget includes \$80 million for discretionary grants that reduce port-related emissions from idling trucks. The IIJA provided \$80 million for this program in both FY 2022 and FY 2023. In FY 2022, FY 2023, and FY 2024 \$50 million and \$30 million are provided from the Highway Trust Fund and the General Fund through advance supplemental appropriations, respectively.

What is this program and what does this funding level support?

The Reduction of Truck Emissions at Port Facilities Program funds projects through competitive grants to reduce truck-related emissions at port facilities. Grantees will test, evaluate, and deploy innovative solutions such as port electrification and other emerging technologies and strategies.

What benefits will be provided to the American public through this request and why is this program necessary?

Port operations generate a significant amount of truck traffic. Commercial motor vehicles serve the port, picking up and dropping off freight shipments, and operating in service on port property. Trucks queue at port gates prior to port openings for credential checks and back-ups form due to heavy demand. There may also be trucks that need to stay at ports, or intermodal port facilities, to meet Federal hours of service requirements, for refueling, and for other driver or vehicle service needs.

This program can demonstrate strategies, designs, operational improvements, and technologies to reduce greenhouse gas emissions linked to commercial trucking activities at ports and intermodal port facilities. It offers an opportunity to explore innovative and alternative port infrastructure projects and streamline operations for improved public and environmental health. These solutions will leverage Federal investment in emissions reduction.

The program will also yield best practices that can be shared and implemented at ports and other areas of concentrated commercial motor vehicle activity nationwide. Projects supported by this program will provide public benefits to the port workforce and surrounding port community including reduced air pollution and a possible reduction in traffic congestion or noise. Truck parking solutions related to the provision of auxiliary services or vehicle charging may also reduce the incidence of trucks parking in unsafe locations or unofficial areas such as port neighborhoods.

Detailed Justification Reduction of Truck Emissions at Port Facilities

What is the request and what funds are currently spent on the program?

FY 2024 – Reduction of Truck Emissions at Port Facilities (\$80 million) (\$000)

Program	FY 2022 Actual	FY 2023 Enacted	FY 2024 Request
Reduction of Truck Emissions at Port Facilities	80,000	80,000	80,000
Total	80,000	80,000	80,000

What is this program and what does this funding level support?

The Reduction of Truck Emissions at Port Facilities Program funds projects through competitive grants that reduce truck-related emissions at port facilities. Grantees will test, evaluate, and deploy innovative solutions such as port electrification and other emerging technologies and strategies. The program also supports studies and provides for a Report to Congress after all the projects are completed. Grants awarded will not exceed an 80 percent Federal share.

What benefits will be provided to the American public through this request and why is this program necessary?

Community health and environmental justice consequences of air pollution resulting from heavy-duty diesel trucks concentrated near ports can be substantial. A study of impacts from growth at the ports of Los Angeles and Long Beach, California¹⁵ found that vehicle-related air pollutants and their resulting health impacts, including the frequency of respiratory ailments and mortality, is highly localized within approximately 100 to 400 meters downwind. Emissions from total shipping (i.e., produced by international, domestic, and fishing) has risen 9.6 percent from 2012 to 2018, and carbon dioxide (CO₂) emissions grew 9.3 percent.¹⁶ Port traffic emissions are expected to increase by 90 to 130 percent before 2050 against 2008 values.

This program will address emissions related to trucking operations and provide a framework for environmentally sound port expansion and growth. The Department will encourage projects that improve workforce conditions, the public and environmental health of nearby communities, and support growth and resiliency. Projects could be used to implement critical infrastructure and operations programs. This program offers an opportunity to explore innovative port infrastructure projects and streamlined operations for improved public and environmental health, such as charging facilities, staging/parking improvements, and port electrification. These

¹⁵ *Transportation Research Record: Journal of the Transportation Research Board*, No. 2067, Transportation Research Board of the National Academies, Washington, D.C., 2008, pp. 38–46

¹⁶ Fourth International Maritime Organization Green House Gases Study of 2020

solutions will leverage Federal investment in emissions reduction and yield best practices for other ports and areas of concentrated truck activity nationwide.

Projects supported by this program will provide benefits to the port workforce and surrounding port community, including reduced air pollution and a possible reduction in traffic congestion or noise. Truck parking solutions related to the provision of auxiliary services or vehicle charging may also reduce the incidence of trucks parking in unsafe or unofficial areas.

This new program aligns with the following departmental priorities:

Addressing Climate Change and Environmental Justice Impacts – In accordance with the Justice40 Initiative (Executive Order 14008: *Tackling the Climate Crisis at Home and Abroad*), this program seeks projects that integrate climate change and environmental justice concerns in the planning stage and are designed with specific elements to address climate change impacts. Such elements may include improvements to the flow of heavy-duty diesel truck traffic through adjacent communities, the incorporation of Climate Action Plans or applying environmental justice screening tools in the planning stage. Projects that reduce emissions, promote energy efficiency, incorporate electrification or zero emission vehicle infrastructure, increase resiliency, and recycle or redevelop existing infrastructure are examples that may address this initiative.

Support for National or Regional Economic Vitality – Investments in infrastructure have a positive effect on the national economy. Macroeconomic and microeconomic modeling indicates that more and better roads reduce the cost of production in most industries at a given level of output by making it faster and cheaper to obtain parts and raw materials and to get finished products to market. Moreover, lower costs lead to lower prices and greater demand, which translate to a growth in output.¹⁷ An efficient, reliable transportation system enables economic competitiveness vital to maintaining economic health and supporting employment for the Nation, States, and localities.

Potential for Innovation –the Port Emissions program is expected to build transformative projects and encourage innovation in three areas: the deployment of innovative technology and expanded access to broadband; the use of innovative permitting, contracting, and other project delivery practices; and innovative financing.

¹⁷ Freight Transportation Movements and the Economy, FHWA

This Page Left Blank Intentionally

Executive Summary

Rural Surface Transportation Grant Program

What is the request and what funds are currently spent on the program?

The FY 2024 budget includes \$400 million for competitive grants to eligible entities to improve and expand the surface transportation infrastructure in rural areas. The IJA provided \$300 million and \$350 million for this program in FY 2022 and FY 2023, respectively. This program is funded through the Highway Trust Fund.

What is this program and what does this funding level support?

The Rural Surface Transportation Grant Program provides competitive grants to eligible entities to improve and expand the surface transportation infrastructure in rural areas. The goals of the program are to increase connectivity, improve safety and reliability of the movement of people and freight, generate regional economic growth, and improve quality of life.

The Federal share is at least 80 percent, and up to 100 percent for projects on the Appalachian Development Highway System (ADHS), or for projects that address a surface transportation infrastructure need identified for the Denali access system program. At least 25 percent of the funds are reserved for projects that further the completion of designated routes of the ADHS. The program sets aside 15 percent of the funding for eligible projects in States with higher-than-average rural roadway lane departure fatalities. At least 90 percent of rural grant amounts must be for projects of at least \$25 million.

What benefits will be provided to the American public through this request and why is this program necessary?

Rural transportation networks are critically important for domestic production and export of agriculture, mining, and energy commodities, as well as the quality of life for all Americans. Two-thirds of rail freight originates in rural areas, and nearly half of all truck vehicle-miles-traveled (VMT) occur on rural roads. Rural roads account for a significant proportion of total lane miles in the United States, and they play a significant role in our nation's transportation system, safely moving people and goods to their destinations. However, rural areas face several transportation challenges relating to safety, usage, and infrastructure condition. While only 19 percent of the U.S. population lives in rural areas, 43 percent of all roadway fatalities occur on rural roads, and the fatality rate on rural roads is almost 2 times higher than on urban roads.¹⁸ Rural bridges that are closed or posted, for example, require American travelers to make detours nearly twice as long as those necessitated by their urban counterparts.

This program provides grants for rural areas to address transportation gaps and challenges. Addressing these challenges will facilitate supply chains and getting goods to market, providing economic benefits both to these regions and to the entire U.S. economy. It also helps to address safety challenges disproportionately faced by rural communities and travelers.

¹⁸ U.S. Department of Transportation, Bureau of Transportation Statistics, Rural Transportation Statistics available at <https://www.bts.gov/rural>

Detailed Justification Rural Surface Transportation Grant Program

What is the request and what funds are currently spent on the program?

FY 2024 – Rural Surface Transportation Grant Program (\$400 million) (\$000)

Program	FY 2022 Actual	FY 2023 Enacted	FY 2024 Request
Rural Surface Transportation Grant Program	300,000	350,000	400,000
Total	300,000	350,000	400,000

What is this program and what does this funding level support?

The Rural Surface Transportation Grant Program provides competitive grants to eligible entities to improve and expand the surface transportation infrastructure in rural areas. The goals of the program are to increase connectivity, improve safety and reliability of the movement of people and freight, generate regional economic growth, and improve quality of life.

The Federal share is at least 80 percent, and up to 100 percent for projects on the ADHS or that address a surface transportation infrastructure need identified for the Denali access system program. At least 25 percent of the funds are reserved for projects that further the completion of designated routes of the ADHS. The program sets aside 15 percent of the funding for eligible projects in States with higher-than-average rural roadway lane departure fatalities. At least 90 percent of rural grant amounts must be for projects of at least \$25 million.

This program provides grants for rural areas to address transportation gaps and challenges. Addressing these challenges will facilitate supply chains and getting goods to market, providing economic benefits both to these regions and to the entire U.S. economy. It also helps to address safety challenges disproportionately faced by rural communities and travelers. Eligible entities are States, regional transportation planning organizations, local governments, Tribal governments or consortia of Tribal governments, and multijurisdictional groups comprising the previously listed entities.

Eligible projects include:

- A highway, bridge, or tunnel project eligible under the National Highway Performance Program, the Surface Transportation Block Grant, and the Tribal Transportation Program; or a highway freight project eligible under the National Highway Freight Program.
- A highway safety improvement project, including a project to improve a high-risk rural road as defined by the Highway Safety Improvement Program.

- A project on a publicly owned highway or bridge that provides or increases access to an agricultural, commercial, energy, or intermodal facility that supports the economy of a rural area.
- A project to develop, establish, or maintain an integrated mobility management system, a transportation demand management system, or on-demand mobility services.

Rural Surface Transportation Grant Program funding focuses on supporting projects that improve safety, economic strength and global competitiveness, equity, and climate and sustainability consistent with the Department’s strategic goals. It is also executed consistently with the priorities in Executive Order 14052: *Implementation of the Infrastructure Investments and Jobs Act*, which are to invest efficiently and equitably, promote the competitiveness of the U.S. economy, improve job opportunities by focusing on high labor standards, strengthen infrastructure resilience to all hazards including climate change, and to effectively coordinate with State, local, Tribal, and territorial government partners.

What benefits will be provided to the American public through this request and why is this program necessary?

This program provides grants for rural areas to address transportation gaps and challenges. Addressing these challenges facilitates supply chains and getting goods to market, providing economic benefits both to these regions and to the entire U.S. economy. It also helps to address safety challenges disproportionately faced by rural communities and travelers. Rural roads account for 68 percent of total lane miles in the United States and play a significant role in our Nation’s transportation system, safely moving people and goods to their destinations. However, rural areas face several transportation challenges relating to safety, usage, and infrastructure condition.

While only **19 percent of the U.S. population lives in rural areas**, 43 percent of all roadway fatalities occur on rural roads and the **fatality rate on rural roads is almost 2 times higher** than on urban roads. Rural bridges that are closed or posted, for example, require American travelers to make detours nearly twice as long as those necessitated by their urban counterparts.¹⁹ This program helps address these safety issues.

Rural transportation networks are critically important for domestic production and export of agriculture, mining, and energy commodities, as well as the quality of life for all Americans. Two-thirds of rail freight originates in rural areas, and nearly half of all truck VMT occur on rural roads.

¹⁹ U.S. Department of Transportation, Federal Highway Administration, [National Bridge Inventory](#).

Executive Summary

Federal Allocation Programs

What is the request and what funds are currently spent on the program?

The FY 2024 budget includes \$534 million for the Federal Allocation Programs. The IJA provided \$521 million and \$528 million for these programs in FY 2022 and FY 2023, respectively. These programs are funded through the Highway Trust Fund, with the exception of \$68 million from the General Fund through advance supplemental appropriations in each of FY 2022, FY 2023, and FY 2024 for the Construction of Ferry Boats and Ferry Terminal Facilities.

What is this program and what does this funding level support?

This program category contains six separate programs that have had a long-standing, positive impact on our Nation's highway infrastructure.

What benefits will be provided to the American public through this request and why is this program necessary?

The **Construction of Ferry Boats and Ferry Terminal Facilities** program provides funding for ferry services which are important links in the network of Federal-aid highways, and in many cases, are the only reasonable form of transportation.

The **Disadvantaged Business Enterprise Supportive Services** program benefits the American public by assisting small and disadvantaged firms with building capacity and improving their ability to compete for Federal-aid highway contracts. Moreover, a healthy small business sector creates jobs, stimulates innovation, and provides employment opportunities for many people, including women and minorities.

Emergency Relief program funds are critical to maintaining mobility and safety for the American public following a disaster. The ER program provides funding to States, Federal Land Management Agencies, and Tribal governments for the repair and reconstruction of Federal-aid highways and roads on Federal lands following a disaster.

The **Highway Use Tax Evasion Projects** program provides funding to the Internal Revenue Service and the States to carry out intergovernmental enforcement efforts, along with training and research, to reduce evasion of payment of motor fuel and other highway use taxes, which are the principal sources for Federal and State highway funding.

The **On-the-Job Training** program helps develop the capacity of the Nation's current and future highway construction industry workforce by providing the development and diversity of skilled labor. A skilled workforce is vital to constructing and maintaining a safe and efficient transportation system.

The **Territorial and Puerto Rico Highway Program** has provided for the construction of critical infrastructure in Puerto Rico and the four territories. The program stimulates local economic growth, which generates a positive impact on a national level. It also provides critical infrastructure that serves key facilities with a strategic role for national defense.

Detailed Justification

Construction of Ferry Boats and Ferry Terminal Facilities

What is the request and what funds are currently spent on the program?

FY 2024 – Construction of Ferry Boats and Ferry Terminal Facilities (\$182 million) (\$000)

Program	FY 2022 Actual	FY 2023 Enacted	FY 2024 Request
Federal Allocation Programs			
Construction of Ferry Boats and Ferry Terminal Facilities	178,400	180,400	182,400
Disadvantaged Business Enterprise ^{1/}	10,000	10,000	10,000
Emergency Relief (exempt from obligation limitation) ^{2/}	100,000	100,000	100,000
Highway Use Tax Evasion Projects ^{1/}	4,000	4,000	4,000
On-the-Job Training ^{1/}	10,000	10,000	10,000
Territorial and Puerto Rico Highway Program	219,000	224,000	228,000
Total	521,400	528,400	534,400

1/ Programs funded as set-asides from Administrative Expenses.

2/ In FY 2022, FY 2023, and FY 2024, \$5.7 million is sequestered from Emergency Relief each year (table does not reflect sequestration).

What is this program and what does this funding level support?

The FY 2024 budget request of \$182 million is required to maintain and improve important transportation connections on the Federal-aid highway system, as well as provide access to remote areas where other modes of transportation may not be available for passengers and vehicles.

The Construction of Ferry Boats and Ferry Terminal Facilities (FBP) program provides funding to construct ferry boats and ferry terminal facilities. Funds are proportionally distributed to eligible ferry operations, based on the number of ferry passengers, the number of vehicles carried, and the total route miles serviced.

Ferry services are important links in the network of Federal-aid highways. Often ferries carry significant numbers of passengers and vehicles. In many cases, they are the only reasonable form of transportation, particularly on coastal islands which have year-round residents.

What benefits will be provided to the American public through this request and why is this program necessary?

This program supports the following DOT priorities and initiatives:

- **Safety:** projects utilizing the FBP funding address roadway safety and implement the Safe System approach wherever possible.
- **Equity:** FHWA will work with States to ensure consideration of using FBP funds for projects and inclusion of project elements that proactively address equity, workforce development, economic development, and remove barriers to opportunity, particularly in traditionally underserved and underrepresented populations. In addition, FBP projects can support the Justice40 Initiative, which establishes a goal that at least 40 percent of the benefits of Federal investments in climate and clean energy infrastructure are distributed to disadvantaged communities.
- **Climate Change:** FHWA encourages recipients to consider projects under the FBP that support climate change resilience, including consideration of the risks associated with wildfires, drought, extreme heat, and flooding, in line with guidance for projects in floodplains. FHWA also encourages recipients to consider projects under the FBP that address environmental justice concerns. Section 11117 (b)(1) of the IIJA provides a temporary increased Federal share of 85 percent on projects to replace or retrofit a diesel fuel ferry vessel that provides substantial emissions reductions through September 30, 2025.

The Construction of Ferry Boats and Ferry Terminal Facilities program addresses mobility and access in urban and rural areas by providing valuable assistance to help States and other entities replace or acquire new ferry boats; replace propulsion systems with newer, cleaner, and more energy-efficient power plants; update navigational control systems; construct new terminals; improve access for the disabled; and replace and construct new docking facilities. Through these activities, the program supports the Secretary's priorities by providing vital connections on the network of Federal-aid highways, increasing mobility and safety particularly for citizens for which ferry services are the only reasonable transportation option. For FY 2022, this program has made \$172.2 million in formula funding available for 112 eligible ferry operations in 35 States and 3 U.S. territories.

Detailed Justification Disadvantaged Business Enterprise Supportive Services Program

What is the request and what funds are currently spent on the program?

FY 2024 – Disadvantaged Business Enterprise Supportive Services (\$10 million) (\$000)

Program	FY 2022 Actual	FY 2023 Enacted	FY 2024 Request
Federal Allocation Programs			
Construction of Ferry Boats and Ferry Terminal Facilities			
	178,400	180,400	182,400
Disadvantaged Business Enterprise Supportive Services ^{1/}	10,000	10,000	10,000
Emergency Relief (exempt from obligation limitation) ^{2/}	100,000	100,000	100,000
Highway Use Tax Evasion Projects ^{1/}	4,000	4,000	4,000
On-the-Job Training ^{1/}	10,000	10,000	10,000
Territorial and Puerto Rico Highway Program	219,000	224,000	228,000
Total	521,400	528,400	534,400

1/ Programs funded as set-asides from Administrative Expenses.

2/ In FY 2022, FY 2023, and FY 2024, \$5.7 million is sequestered from Emergency Relief each year (table does not reflect sequestration).

What is this program and what does this funding level support?

The FY 2024 budget requests \$10 million for the Disadvantaged Business Enterprise Supportive Services (DBE/SS) Program. The FY 2024 request supports the ability of States to enhance vital DBE/SS programs and supports three of the Secretary’s key priorities for the FY 2024 budget: Economic Strength and Global Competitiveness; Equity; and Transformation. Further, the program directly supports Executive Order 13985: *Advancing Racial Equity and Support for Underserved Communities Through the Federal Government* and is an essential element for wealth creation.

State Departments of Transportation (State DOTs), as recipients of Federal-aid highway funds are required to administer a Disadvantage Business Enterprise (DBE) program. The DBE/SS program supports the ability of State DOTs to achieve the objectives of the DBE program, which are to ensure nondiscrimination and allow small businesses owned primarily by minorities and women to compete fairly for DOT-assisted contracts in the transportation industry (49 CFR Part 26).

The DBE/SS Program under section 140(c) of title 23 United State Code, authorizes FHWA to fund \$10 million annually to participating State DOTs to administer programs that develop and provide training and technical assistance to DBE firms to improve their business practices, overcome barriers to success, and develop and diversify to improve their ability to participate on federally assisted contracts. This program seeks to redress current discrimination and the effects of past discrimination that historically excluded firms owned by minorities and women from participation in contracts funded by the Federal government. A more diverse make-up of firms participating on improving America's infrastructure helps ensure competition, job creation, supports the creation and transfer of wealth, and strengthens the economic base of our country.

The DBE/SS funds made available each fiscal year are allocated by the FHWA Office of Civil Rights to State DOTs by formula and are eligible for a 100 percent Federal share, with no State match required. The primary purpose of the DBE/SS program is to provide training, capacity building assistance, and services to firms certified in the DBE program. This training and support is intended to increase their activity within the program, and to facilitate the firms' development into viable, self-sufficient organizations capable of competing for, and performing on, federally assisted highway projects.

Since FY 2015, FHWA has required State DOTs accepting DBE/SS funds to create and administer Business Development Programs (BDPs). These BDPs must provide DBEs the opportunity to be evaluated and must provide a structured process for the DBEs to receive firm-specific training and guidance to be competitive within the heavy highway marketplace. Program activities include seminars that highlight DBE program regulation and/or policy changes, workshops geared to help small firms grow their business capacity, and training in bonding and financial assistance, marketing, and accounting.

What benefits will be provided to the American public through this request and why is this program necessary?

This program supports three of the Secretary's key priorities for the FY 2024 budget: Economic Strength and Global Competitiveness; Equity; and Transformation. Further, the program directly supports Executive Order 13985: *Advancing Racial Equity and Support for Underserved Communities Through the Federal Government*. The program directly supports small business development, specifically small businesses owned by minorities and women. Small businesses are vital to the health of the Nation's economy and can significantly contribute to infrastructure redevelopment initiatives. Small businesses generate new employment opportunities within their local communities and thereby contribute to the economic strength and stability of these communities.

The program is necessary to assist a sector of the small business community to build their capacity and ability to compete for contracts. Additionally, this program assists with creating a more diverse make-up of firms participating in improving America's infrastructure that, in turn, contributes toward ensuring competition, job creation, and strengthens the economic base of our country.

With respect to E.O. 13985, this program serves to address ongoing discrimination and the effects of past discrimination that historically excluded firms owned by minorities and women from participation in transportation projects funded by the Federal government.

In January 2023, FHWA announced the allocation of \$10 million in Fiscal Year 2022 Disadvantaged Business Enterprise/Supportive Services (DBE/SS) program funding to 47 State DOTs, including the District of Columbia, Puerto Rico, and the U.S. Virgin Islands. This funding will allow participating states to provide training and business development services to eligible small businesses to improve their ability to compete as prime and subcontractors on federally assisted contracts.

Detailed Justification Emergency Relief Program

What is the request and what funds are currently spent on the program?

FY 2024 – Emergency Relief Program (\$100 million) (\$000)

Program	FY 2022 Actual	FY 2023 Enacted	FY 2024 Request
Federal Allocation Programs			
Construction of Ferry Boats and Ferry Terminal Facilities	178,400	180,400	182,400
Disadvantaged Business Enterprise ^{1/}	10,000	10,000	10,000
Emergency Relief (exempt from obligation limitation) ^{2/}	100,000	100,000	100,000
Highway Use Tax Evasion Projects ^{1/}	4,000	4,000	4,000
On-the-Job Training ^{1/}	10,000	10,000	10,000
Territorial and Puerto Rico Highway Program	219,000	224,000	228,000
Total	521,400	528,400	534,400

1/ Programs funded as set-asides from Administrative Expenses.

2/ In FY 2022, FY 2023, and FY 2024, \$5.7 million is sequestered from Emergency Relief each year (table does not reflect sequestration).

What is this program and what does this funding level support?

Congress authorized the Emergency Relief (ER) program from the Highway Trust Fund in section 125 of title 23, United States Code, providing for the repair or reconstruction of Federal-aid highways and roads on Federal lands that have suffered serious damage as a result of: (1) natural disasters; or (2) catastrophic failures from an external cause. This program supports the Secretary’s key priorities of infrastructure and safety by supplementing the commitment of resources from States, their political subdivisions, or other Federal agencies, to help pay for unusually heavy expenses resulting from extraordinary conditions that damage existing infrastructure and allow such infrastructure to return to a safe condition.

Examples of natural disasters include floods, hurricanes, earthquakes, tornadoes, tidal waves, severe storms, landslides, and wildfires. A catastrophic failure from an external cause is defined as the sudden and complete failure of a major element or segment of the highway system that causes a disastrous impact on transportation services. The cause of the catastrophic failure must be determined to be external to the facility. A bridge suddenly collapsing after being struck by a

barge is an example of a catastrophic failure from an external cause. Failures due to an inherent flaw in the facility itself do not qualify for ER assistance.

When a natural disaster or catastrophe strikes, the ER program is available to provide assistance to re-open damaged highways to essential traffic. Longer-term permanent repairs to restore damaged highways are also funded through the ER program. When economically justified, betterments to damaged highways, aimed at improving the resiliency of those facilities, would be eligible for funding through the ER program. Additionally, the law makes eligible the cost of a comparable facility that is designed to current geometric and construction standards required for the types and volume of traffic the facility will carry over its design life.

The ER program has been funded through a recurring annual authorization of \$100 million since 1972. When the ER program has demonstrated needs exceeding available funding, Congress has provided supplemental appropriations, typically from the General Fund.

Over the past 6 years, the costs of nationwide ER events have averaged about \$1.2 billion annually. Since 2005, over \$18.8 billion has been provided through supplemental appropriations to the ER program, in addition to the annual \$100 million authorization. This includes recent appropriations of \$1.5 billion in FY 2017, \$1.4 billion in FY 2018, \$1.7 billion in FY 2019, \$2.6 billion in FY 2022, and \$803 million in FY 2023 for nationwide disasters. These appropriations are not part of the Federal-aid Highway Account and are funded by the General Fund.

In August 2022, FHWA announced \$513 million in Emergency Relief funds to help 30 States, the District of Columbia, and Puerto Rico make repairs to roads and bridges damaged by storms, floods, wildfires, and other events in recent years. The Fiscal Year 2022 allocation provides funding for continued repairs from the 2015 and 2016 California Winter Storms, 2017 Hurricanes Irma and Maria, 2020 Michigan Spring Flooding and recent Arkansas flooding and Alabama tornadoes.

The estimate of nationwide unmet ER needs as of January 2023 was \$2.4 billion.

What benefits will be provided to the American public through this request and why is this program necessary?

ER program funds are critical to maintaining mobility and safety for the American public following a disaster. Natural disasters and catastrophes that destroy highways and bridges are unpredictable events and can occur anywhere in the country. The ER program provides funding to States, Federal Land Management Agencies, and Tribal governments for the repair and reconstruction of Federal-aid highways and roads on Federal lands following a disaster. The ER Program supports the Secretary's priorities by returning damaged roads and bridges to safe operating conditions, improving damaged roads and bridges by upgrading to current design standards, and, when eligible, improving resiliency.

Through the Emergency Relief Program, FHWA often provides "quick release" funding which helps restore critical transportation infrastructure immediately after an event. These funds are a down payment toward restoring damaged transportation infrastructure. Recently, FHWA has distributed approximately \$110 million in Emergency Relief quick release funding to: offset

costs of repair work needed as the result of hurricanes Fiona and Ian and typhoon Merbok; defray costs associated with roadwork in Death Valley National Park and Idaho due to flood damage; and repair roads and bridges in California after multiple storms and flooding events.

Detailed Justification Highway Use Tax Evasion Projects

What is the request and what funds are currently spent on the program?

FY 2024 – Highway Use Tax Evasion Projects (\$4 million) (\$000)

Program	FY 2022 Actual	FY 2023 Enacted	FY 2024 Request
Federal Allocation Programs			
Construction of Ferry Boats and Ferry Terminal Facilities	178,400	180,400	182,400
Disadvantaged Business Enterprise ^{1/}	10,000	10,000	10,000
Emergency Relief (exempt from obligation limitation) ^{2/}	100,000	100,000	100,000
Highway Use Tax Evasion Projects ^{1/}	4,000	4,000	4,000
On-the-Job Training ^{1/}	10,000	10,000	10,000
Territorial and Puerto Rico Highway Program	219,000	224,000	228,000
Total	521,400	528,400	534,400

1/ Programs funded as set-asides from Administrative Expenses.

2/ In FY 2022, FY 2023, and FY 2024, \$5.7 million is sequestered from Emergency Relief each year (table does not reflect sequestration).

What is this program and what does this funding level support?

The Highway Use Tax Evasion Projects (HUTE) program provides funding to the Internal Revenue Service (IRS) and the States to carry out intergovernmental enforcement efforts, along with training and research, to reduce evasion of payment of motor fuel and other highway use taxes, which are the principal sources for Federal and State highway funding. The budget requests \$4 million to fund this program in FY 2024. Of this amount: \$2 million is available to make grants for intergovernmental enforcement efforts, including research and training. The intergovernmental enforcement efforts grants are awarded to State agencies through a competitive application process from which FHWA and the IRS make selections based on the most innovative, intergovernmental proposals. The States then perform various tasks, including increased enforcement, enhancement of data systems, and coordination with other State agencies.

The remaining funding may, at the discretion of the Secretary of Transportation, either be awarded for intergovernmental enforcement efforts grants, or allocated to the IRS for their enforcement efforts.

While the statute allows for the IRS to determine the use of their allocations, they must be used in some fashion related to the identification and elimination of highway use tax evasion. IRS initiatives may include, but are not limited to, office examinations, refinery and terminal examinations, and on-road enforcement in areas such as the illegal use of dyed diesel fuel by motor vehicles.

The FY 2024 request will continue to fund IRS initiatives, including the expansion of the Joint Operations Center for National Fuel Tax Compliance (JOC), a joint FHWA/IRS/State initiative and new, innovative, and intergovernmental enforcement efforts at the State level.

Through the efforts of this program, the IRS has launched a number of initiatives over the past ten years, including: Diesel Examinations, Tire Tax Examinations, the review of Heavy Highway Vehicle Use Tax (HVUT) returns, mislabeled imported fuel examinations, examinations of mislabeled products at refineries and terminals, and examinations of questionable credit claims. These are just some of the efforts supported in part by the annual allocation to the IRS.

Over the past five years, \$10 million in funding was provided to the IRS, which resulted in \$480 million in assessments through various activities, including internal audits, refinery and terminal inspections, and retail truck inspections. The IRS initiatives are not solely funded from Highway Use Tax Evasion funds, but they provide a significant portion of the funding.

The following table shows examples of initiatives at the State level, comparing amounts provided by this program and the results from FY 2019 through FY 2022.

Year	Agency	Expenditures	Results	Description
2022	Arizona Department of Transportation	\$ 90,520	\$ 4,772,084	Results are from State assessments on 283 leads from 39 taxpayers. Amount includes taxes, penalties, and interest. Information mainly from comparisons of State data and ExStars (IRS reporting) data.
2022	Colorado Department of Revenue	\$ 82,400	\$ 7,044,555	Based on information provided by fuel distributor data, information received from other distributors, and information received from other states, the Fuel Unit tracks assessments made for the FHWA Motor Fuel Tax Compliance project.

2022	North Carolina Department of Revenue	\$ 36,204	\$ 1,961,343	Since North Carolina began actively auditing in 2015 utilizing JOC data, a total of 69 audits have been completed, resulting in \$9,527,830 in revenue assessments, and an overall efficiency rating of \$4,563 per hour spent on an audit.
2021	Arizona Department of Transportation	\$ 108,444	\$ 14,649,522	Results are from State assessments on 565 leads from 45 taxpayers. Amount includes taxes, penalties, and interest. Information mainly from comparisons of State data and ExStars (IRS reporting) data.
2019	Alabama Department of Transportation	\$ 202,388	\$ 2,870,000	Results include: Over 200 International Fuel Tax Agreement (IFTA) citations for license issue; identified 130 unreported fuel diversions; \$ 2 million increase in IFTA revenue; over \$ 870,000 in fuel taxes assessed on suspected fuel tax evasion cases.

As the data indicates, there are significant findings at the IRS and State levels; however, highway use tax evasion persists with new methods of evasion regularly employed. The continued funding of this program would strengthen not only the successful efforts already in place, but also the enhanced practices resulting from training and vital equipment, such as enhanced motor fuel tracking computer software that is critical for sharing information between the IRS and States. The HUTE program funding can also be used for training in the assessment of highway tax evasion. Many States have opted for this training, which provides great value by preparing practitioners to complete the assessments noted in the above table.

What benefits will be provided to the American public through this request and why is this program necessary?

The collection of highway use taxes is a critical part of the Federal-aid highway program. The HUTE program will increase transportation revenues at the Federal and State levels ensuring that these valuable tax dollars can be properly used to increase the safety and mobility of the Nation’s roads and bridges.

The HUTE program aligns with the following Secretary’s key priorities:

Safety – Due to the unique nature of this program, there is a heavy emphasis on identifying and preventing evasion of highway use taxes. In addition to the fact that motor fuels are hazardous materials, and evasion often accompanies theft, the unaccounted-for movement, and handling of the product can cause safety issues. Furthermore, the adulteration of fuel can create unstable mixtures, damaging engines and creating a potential for fires and other hazards. Often it is found that those who are evading the taxes have a willingness to avoid all safety protocols.

Economic Strength and Global Competitiveness – The evasion of highway use taxes directly affects the Highway Trust Fund and thus reduces the revenue available for all highway-related programs. The revenue will help grow an inclusive and sustainable economy. We can invest in our transportation system to provide American workers and businesses reliable and efficient access to resources, markets, and good-paying jobs.

Detailed Justification On-the-Job Training

What is the request and what funds are currently spent on the program?

FY 2024 – On-the-Job Training (\$10 million) (\$000)

Program	FY 2022 Actual	FY 2023 Enacted	FY 2024 Request
Federal Allocation Programs			
Construction of Ferry Boats and Ferry Terminal Facilities	178,400	180,400	182,400
Disadvantaged Business Enterprise ^{1/}	10,000	10,000	10,000
Emergency Relief (exempt from obligation limitation) ^{2/}	100,000	100,000	100,000
Highway Use Tax Evasion Projects ^{1/}	4,000	4,000	4,000
On-the-Job Training ^{1/}	10,000	10,000	10,000
Territorial and Puerto Rico Highway Program	219,000	224,000	228,000
Total	521,400	528,400	534,400

1/ Programs funded as set-asides from Administrative Expenses.

2/ In FY 2022, FY 2023, and FY 2024, \$5.7 million is sequestered from Emergency Relief each year (table does not reflect sequestration).

What is this program and what does this funding level support?

The On-the-Job Training Supportive Services (OJT/SS) Program under section 140(b) of title 23, United States Code (U.S.C.), supports the State Departments of Transportation (DOTs) On-the-Job Training (OJT) programs. As recipients of Federal transportation funds, State DOTs must establish an OJT program.

The OJT/SS program provides resources to program participants that enable them to take advantage of the training provided by OJT. These resources create more opportunities for individuals to participate in the OJT program – especially those who are members of underrepresented groups. Supportive services may include, but are not limited to, the following: assistance with childcare expenses; temporary lodging associated with the training; transportation assistance such as vouchers from public transit or rideshares; personal protective equipment and work gear such as steel-toed boots; stipends for basic necessities such as food while actively in training. The objective is to enhance capacity of the highway construction

workforce as a whole, and the supportive services funding is used to build skill sets and job accessibility in local, state and federally funded construction projects.

Additionally, 23 U.S.C. 140(b) provides authority to support efforts within the academic community to engage students in transportation-related career opportunities. Funding is provided to States to partner with accredited academic institutions for the National Summer Transportation Institute program focused on science, technology, engineering, and math opportunities for high school and junior high/middle school students to learn about, and become familiar with, transportation-related career options. Funding also supports the Summer Transportation Internship Program for Diverse Groups, which provides internship opportunities for college students to engage with DOT modes to work in a transportation-related career field.

What benefits will be provided to the American public through this request and why is this program necessary?

This program supports four of the Secretary’s key priorities for the FY 2024 budget: Economic Strength; Ensuring Investments Meet Equity and Economic Inclusion Goals; Climate and Sustainability; and Transformation of our Nation’s Transportation Infrastructure. Further, the program directly supports the Administration’s Executive Order 13985: *Advancing Racial Equity and Support for Underserved Communities*.

The program supports the highway construction industry establishing and maintaining apprenticeship and training programs targeted to move minorities, women, and disadvantaged individuals into journey-level positions. It is necessary to support the capacity of the Nation’s current and future highway construction industry workforce to expand the diversity of skilled labor. It familiarizes individuals with transportation-related training opportunities and encourages them to pursue a career in transportation. It prepares students to be competitive in transportation careers. The program is an opportunity for individuals to retool their skills due to changes in industries related to climate change, such as fossil fuels like coal. For the American public, a skilled workforce is vital to designing, constructing, operating, and maintaining a safe and efficient transportation system that underpins the national economy.

According to a 2021 national survey by the Associated General Contractors of America²⁰, 89 percent of construction firms reported difficulty finding qualified workers. This program is necessary to assist the highway construction industry with identifying, training, and placing individuals on highway construction projects. Additionally, the program assists with creating a more diverse make-up of the highway construction workforce, which moves America more towards economic justice.

With respect to E.O. 13985, this program addresses ongoing discrimination and the effects of past discrimination that historically excluded minorities, women, and disadvantaged individuals from employment in the highway construction industry especially on transportation projects funded by the Federal government. FHWA is collecting national data to better understand the impact of the OJT/SS programs on increasing the employment of minorities, women, and disadvantaged individuals on highway construction projects.

Detailed Justification Territorial and Puerto Rico Highway Program

What is the request and what funds are currently spent on the program?

FY 2024 – Territorial and Puerto Rico Highway Program (\$228 million) (\$000)

Program	FY 2022 Actual	FY 2023 Enacted	FY 2024 Request
Federal Allocation Programs			
Construction of Ferry Boats and Ferry Terminal Facilities	178,400	180,400	182,400
Disadvantaged Business Enterprise ^{1/}	10,000	10,000	10,000
Emergency Relief (exempt from obligation limitation) ^{2/}	100,000	100,000	100,000
Highway Use Tax Evasion Projects ^{1/}	4,000	4,000	4,000
On-the-Job Training ^{1/}	10,000	10,000	10,000
Territorial and Puerto Rico Highway Program	219,000	224,000	228,000
Total	521,400	528,400	534,400

1/ Programs funded as set-asides from Administrative Expenses.

2/ In FY 2022, FY 2023, and FY 2024, \$5.7 million is sequestered from Emergency Relief each year (table does not reflect sequestration).

What is this program and what does this funding level support?

This program provides funding to Puerto Rico and the four territories of American Samoa, the Commonwealth of the Northern Mariana Islands, Guam, and the United States Virgin Islands. Of the FY 2024 budget request of \$228 million, \$180 million would be provided to Puerto Rico, and the remaining \$48 million is divided among the four territories via an administrative formula.

The Transportation Equity Act for the 21st Century of 1998 established the Puerto Rico Highway Program. The Federal-Aid Highway Act of 1970 created the Territorial Highway Program, and subsequent legislation continued the program. The Bipartisan Infrastructure Law continues to provide dedicated funding to assist each territory in the construction and improvement of a system of arterial and collector highways, and necessary inter-island connectors.

In direct support of the Secretary’s key priorities of infrastructure and safety, 50 percent of the funds provided to Puerto Rico must be spent on projects eligible under the National Highway Performance Program (NHPP), 25 percent must be spent on projects eligible under the Highway Safety Improvement Program (HSIP), and the remaining 25 percent can be spent for any purpose

under chapter 1 of title 23, United States Code. The location and eligibility requirements are similar to those that apply to the States.

Funds provided to the four territories may be used for projects eligible under the Surface Transportation Block Grant Program (STBG); preventive maintenance; ferry boats, terminals, and approach roadways; engineering, economic and planning studies; regulation and equitable taxation of highways; and research and development. Territorial funds are generally subject to the location requirements of the STBG, except that rural minor collector routes are eligible. The four territorial programs are administered under individual agreements between the Secretary and the chief executive officer of each of the territories.

Territorial and Puerto Rico Highway Program funding is critical to providing transportation infrastructure to Puerto Rico and the four territories. Puerto Rico and the four territories have military facilities or serve a strategic role important to national defense. They also contribute to the national economy through tourism, agriculture, and access to foreign trade.

What benefits will be provided to the American public through this request and why is this program necessary?

The Territorial and Puerto Rico Highway Program supports the President's efforts outlined in Executive Orders 14002: *Economic Relief Related to the COVID-19 Pandemic*, 13985: *Advancing Racial Equity and Support for Underserved Communities Through the Federal Government*, and 14008: *Tackling the Climate Crisis at Home and Abroad*. This program does so by creating projects that provide safe multimodal facilities and generating high paying jobs in underserved communities. Projects funded through these programs have a positive impact on the life of residents by improving access to job centers, and educational and healthcare facilities.

Specifically, it will help repair and rebuild roads and bridges, allowing for funds to be applied to climate change mitigation, resilience, equity, and safety for all users, including cyclists and pedestrians. In addition to increasing safety, mobility, transportation equity, and accessibility, the Territorial and Puerto Rico Highway Program also provides critical infrastructure that serves key facilities, which have a strategic role for national defense.

This Page Left Blank Intentionally

Executive Summary

Research, Technology & Education (RT&E) Program

What is the request and what funds are currently spent on the program?

The FY 2024 budget includes \$519 million for the RT&E Program. The IJA provided \$517 million and \$518 million for this program in FY 2022 and FY 2023, respectively. This program is funded through the Highway Trust Fund, with the exception of \$19 million from the General Fund in advance supplemental appropriations in FY 2022, FY 2023, and FY 2024 for University Transportation Centers.

What is this program and what does this funding level support?

The RT&E program delivers research, development, and training to address critical knowledge gaps that are not effectively addressed by other research sponsors and to foster the implementation of technologies to meet current and future highway transportation needs across all communities. Research products are transferred to the end users and/or made available in the marketplace through various technology transfer mechanisms supported by the RT&E Program.

The RT&E Program is comprised of the following subprograms:

- Highway Research & Development: \$147 million for research and development to produce transformative solutions to improve safety, foster innovation, accelerate projects, and better meet operations, policy, and infrastructure needs.
- Technology & Innovation Deployment: \$110 million to turn research products into proven technologies that address emerging needs, invest in the Nation's infrastructure, and promote rapid adoption of proven, market-ready technologies and innovations.
- Intelligent Transportation Systems Program (ITS): \$110 million for innovative research and rapid deployment of applications and tools that facilitate a safe, connected, integrated, and automated transportation system that is information-intensive to better serve the interests of users and be responsive to the needs of travelers and system operators.
- Training & Education Program (T&E): \$25.5 million to train the current and future transportation workforce, transferring knowledge quickly for effective deployment.
- State Planning and Research program (SP&R – Planning Portion: \$767 million; Research portion: \$256 million -- Non-add): The States must set aside \$256 million of their formula program funds to conduct research and deploy technologies and innovations of local, regional, and national interest. This program is a set-aside from the NHPP, STBG, HSIP, CMAQ, and NHFP programs.
- University Transportation Centers (\$100 million), and Bureau of Transportation Statistics (\$26.5 million): These programs are administered by the Office of the Assistant Secretary for Research and Technology.

What benefits will be provided to the American public through this request and why is this program necessary?

FHWA's contributions to researching and implementing transformative innovations and technologies are changing the way roads, bridges, and other facilities are planned, designed, built, operated, managed, and maintained. Innovations developed and/or advanced through the RT&E program support and improve safety and enable a more reliable and equitable transportation system that is cost-effective and sustainable, thus improving overall economic competitiveness and quality of life.

Detailed Justification Highway Research and Development Program

What is the request and what funds are currently spent on the program?

FY 2024 – Highway Research and Development Program (\$147 million) (\$000)

Program	FY 2022 Actual	FY 2023 Enacted	FY 2024 Request
Research, Technology & Education Program ^{1/}			
Highway Research and Development Program	147,000	147,000	147,000
Technology and Innovation Deployment Program	110,000	110,000	110,000
Intelligent Transportation Systems Program	110,000	110,000	110,000
Training and Education	25,000	25,250	25,500
University Transportation Centers ^{2/}	99,000	99,500	100,000
Bureau of Transportation Statistics ^{2/}	26,000	26,250	26,500

State Planning & Research (SP&R research portion) [Non-Add]	[245,825]	[250,767]	[255,807]
Total	517,000	518,000	519,000

^{1/} This program is funded through the Highway Trust Fund, with the exception of \$19 million from the General Fund in advance supplemental appropriations for University Transportation Centers.

^{2/} Administered by the Office of the Assistant Secretary for Research and Technology.

What is this program and what does this funding level support?

This request enables the Department to conduct, sponsor, sustain, and guide highway research and development activities that address current and emerging highway challenges across all communities and provide data and information to support policy decisions. This request aligns with the Secretary’s priorities and provides the funding required to support a comprehensive and coordinated research and development program that will advance the safety of the Nation’s surface transportation system, ensure economic strength and improve core assets, ensure investments meet equity and economic inclusion goals, climate and sustainability, and enable the transformation of our Nation’s transportation infrastructure to provide accessibility and meet future needs.

The FHWA fosters innovative development as a continuous cycle by working with stakeholders and private partners to identify and invest in emerging needs. FHWA has a long history of strong partnerships with the States, Federal agencies, academia, and private industry to coordinate efforts and leverage the unique capabilities of each to advance shared goals. In addition, FHWA

develops joint strategies to address Departmental goals with modal stakeholders. Leveraging the outputs of this process, the Agency sets goals to address the national gaps and opportunities through research and technology deployment.

FHWA's Office of Research, Development, and Technology (RD&T) is located at the Turner-Fairbank Highway Research Center (TFHRC), a federally owned and operated national research facility in McLean, Virginia. The TFHRC houses 15 laboratories and support facilities and conducts exploratory and applied research as well as development activities. The TFHRC staff administers the majority of FHWA's research and development activities in the areas of infrastructure, advanced/future operations, and safety. Research in areas of Intelligent Transportation Systems, policy, innovative finance, planning, operations, and the environment is primarily conducted or administered by FHWA offices located at DOT Headquarters.

The Highway Research and Development Program is administered in conjunction with the Technology and Innovation Deployment Program and supports the Training and Education Program, the Intelligent Transportation System Program, and the State Planning and Research Program.

What benefits will be provided to the American public through this request and why is this program necessary?

The programs under FHWA's R&D portfolio cover exploratory advanced research, applied research and development, and initial testing of technological solutions that address emerging needs and support the infrastructure of the future. FHWA's research programs seek to improve safety, reduce congestion, enhance infrastructure design and construction, and provide data and analyses to decision-makers throughout the transportation community. The FHWA research programs fill a critical gap in the development of transformative innovations. While the private sector and university research programs are critical to the advancement of highway safety, operations, and infrastructure, the FHWA research program is not constrained by the same barriers to innovation such as risk aversion and long-term investments. This allows FHWA, in coordination with these other research entities, to lead the way and accelerate innovation in critical areas that will serve as a direct benefit to taxpayers across the Nation and will support continued economic competitiveness.

- **The Safety R&D Program** addresses the contributing factors to deaths and injuries related to roadway design, construction and maintenance, and develops robust data analysis tools that enable transportation professionals to match those contributing factors with cost-effective countermeasures. The FHWA Safety R&D Program works extensively through pooled fund studies such as the Evaluation of Low-Cost Safety Improvements to assess the safety effectiveness and cost-benefit of roadway and roadside safety improvements by applying advanced statistical analysis. The FHWA Safety R&D Program invests in topics such as data-driven safety plans to reduce rural roadway departures, as well as analysis of human behavior in response to automated vehicle technologies.

The FHWA Safety R&D Program will also apply the principles of the Safe Systems Approach that considers human error and focuses on countermeasure development that

improves the protection of vehicle occupants, pedestrians, bicyclists, and other vulnerable road users. Efforts in safety design and operations will promote infrastructure-oriented safety treatments and strategies, chosen based on proven effectiveness and benefits, to encourage widespread implementation by State, Tribal, and local transportation agencies to reduce serious injuries and fatalities on the Nation's highways. This effort will involve collaboration with agencies as they design and operate roadways to fully integrate the needs of all users, accommodate human error, and minimize injury severity.

Pedestrian and bicycle safety continue to be focus areas of the broader safety program because annual pedestrian and bicyclist fatalities have been at their highest levels in decades. The Vulnerable Road Users (VRU) Research Plan, required under section 11122 of the IIJA, will outline FHWA's efforts over the next five years in this area. The VRU Research Plan will go beyond safety aspects of walking and bicycling and will describe efforts related to mobility and access and related data and analysis. The document will emphasize the connection between walking, biking, and rolling and the goals contained in the DOT Strategic Plan, including improving mobility for all people and businesses, improving access to jobs and essential services for all, increasing resilience for all communities, improving public health outcomes, coordinating transportation and land use decisions, addressing climate change, advancing equity, addressing accessibility for people with disabilities, and providing for workforce development.

The Human Factors program continues to expand the capability of the Virtual/Augmented Reality Laboratory supporting and evaluating various pedestrian, bicyclist testing by launching new tests that take advantage of multiple participants in a common virtual scenario. Further Human Factors activities will assess automated vehicle Operations and Safety applications and use cases to understand human behavior effects. New analytics are under development that provide novel approaches to identify high-risk pedestrian locations using alternative data sources.

- **The Infrastructure R&D Program** engages in forward-looking research that promotes investment in the Nation's infrastructure through improved safety, accessibility, durability, resilience, environmental sustainability, and asset management. Safety is advanced through improvements in infrastructure characteristics such as friction and drainage and through advancement of effective inspection, evaluation, and management to allow timely identification and correction of infrastructure at risk of becoming unsafe. Additionally, investments in innovations that improve infrastructure durability and resiliency, and accelerate onsite construction improve safety by reducing exposure to the hazards of highway work zones. The FHWA Infrastructure Program will conduct R&D aimed at improving bridges and roads through the advancement of test methods and specifications, including the promotion of best practices in highway construction and inspection, as well as the development of solutions for steel and concrete bridges that result in improved infrastructure durability. The Infrastructure Program will also provide technical assistance and resources to State and local partners through activities that include developing analytical tools that are needed by States and Metropolitan Planning Organizations (MPOs) for Transportation Performance Management.

New areas of exploration planned for FY 2024 include: assessment of impacts of changing climate condition on bridge scour and development of scour hazard curves using probabilistic analysis; validation of nondestructive testing technologies to evaluate the resiliency of in-service pavement foundations; advancement of laboratory and field test methods for recycled/alternative structural backfills used in transportation infrastructure to preserve valuable natural resources and promote sustainability; development of digital twins through better data accessibility, integration and governance; development of methods to improve pavement life cycle assessments; improved infrastructure resilience to manmade and natural hazards; assessment and deployment of highway speed continuous friction measurements for pavement safety; development of a tool to determine cement paste characteristics using Quantitative Image Analysis; development of a performance framework for the use of low-carbon concrete in infrastructure structural systems; development of more resilient bridge decks through the use of internally cured concrete; and improvement of long-term infrastructure performance forecasting accounting to multiple applicable factors.

- **The Operations R&D Program** develops innovative technologies and processes that lead to system-wide improvements in how FHWA and stakeholders in State and local agencies manage and improve the efficiency and reliability of the National Highway System (NHS). The FHWA Operations Program will invest in topics such as operations strategies to improve equitable mobility and address climate change, active management techniques to increase operational resiliency and safety, and advanced integration of emerging technologies as well as freight mobility to enhance the movement of goods supporting economic competitiveness.

In FY 2024, FHWA will incorporate new data, algorithms, artificial intelligence (AI), and machine learning (ML) tools and techniques being developed in other Federal and University laboratories into research on policy, strategy effectiveness, and advanced analysis, modeling, and simulation (AMS) tools. Advanced AMS tools will allow for a more detailed and comprehensive assessment of how transformative technologies, such as Automated Driving Systems and Cooperative Driving Automation (CDA) will impact the NHS. AMS tools will also enable assessment of operations strategies that leverage CDA to smooth traffic flow and reduce climate change impacts. Advanced technologies, including AI/ML, will also be evaluated as a means to develop decision support systems for the next generation of Traffic Management Systems to improve system performance. FHWA will continue to advance CDA as an open-source research program to collaboratively develop the concept of shared maneuvers to address key transportation issues.

In FY 2024, FHWA will update and incorporate new data and analysis with the Freight Mobility Trends (FMT) tool and the Freight Analysis Framework (FAF). These tools analyze freight movement in different areas of the country, along specific corridors, at bottleneck locations, and at intermodal facilities to understand supply chain transportation issues for freight flows, reliability, traffic congestion, and bottlenecks. This information assists with policy decisions that respond to freight transportation and supply chain needs, provides data for the National Freight Strategic Plan, the Supply Chain Disruptions Task Force's Freight and Logistics Supply Chain Assessment, and the

Highway Freight Conditions and Performance Report to Congress, while providing national data on freight mobility to support stakeholders at State DOTs and MPOs. FHWA will continue to advance research on freight transportation system management and operations tools that States and MPOs can use to help improve freight mobility, reliability, and reduce bottlenecks. Research will also focus on methods to prevent bridge strikes through countermeasures such as warnings systems and oversized vehicle routing procedures. FHWA will also continue to develop strategies for addressing the shortage of truck parking to improve the safety for commercial motor vehicle operators and other highway users.

- **The Policy R&D Program** offers comprehensive quality data; evaluates the impacts of a broad range of policy options; and analyzes current and emerging issues that will impact the way transportation projects are regulated and permitted, and how transportation systems are constructed, operated, and maintained. The Highway Data and Information activities under the Policy R&D program provide a strong data and information foundation for carrying out the Department's priorities. The focus will be the continuation of improving a variety of data collection and processing methods and taking advantage of “big data” for integrated and linked data systems. The Policy Program provides empirical analysis of potential regulatory economic impacts, policy options, and strategic planning and performance measures. Specifically, it uniquely integrates economics, public policy, geography, and statistics disciplines, to: 1) model travel behavior within the context of changing transportation technologies, costs, benefits, and markets; 2) improve FHWA and DOT forecasting and policy analysis capabilities; 3) expand the types of policy alternatives modeled to improve ability to identify cost-effective strategies; 4) provide ‘what if’ empirical and risk-based sensitivity analyses of future transportation needs, policy, and strategic options; and 5) facilitate transportation policy and strategy dialogue.

In FY 2024, FHWA will continue work to develop and adapt tools to support implementation of the IIJA including the development of a Highway Cost Allocation Study and the expansion of the scope of the biennial Conditions and Performance report to Congress. The Geospatial Economic Multimodal System (GEMS) model will be applied to policy analyses relating to the Justice40 Initiative, supporting the implementation of E.O. 13985 *Advancing Racial Equity and Support for Underserved Communities through the Federal Government*.

- **The Office of International Programs** has three main international program elements: Global Benchmarking, Binational, and Multinational Relations. Through collaboration with international and domestic partners, these programs work to address the Secretary’s and FHWA’s priorities. For example, a one-time visit to a country for Global Benchmarking may lead to a long-term exchange as part of a bilateral relationship. A successful bilateral exchange may lead to a multilateral research project. Information or developments gleaned during a multilateral meeting may attract the interest of FHWA subject matter experts and lead to a Global Benchmarking study. In this way, the programs work in complementary ways to address different aspects of FHWA’s international efforts, all while focusing on U.S. priorities and initiatives.

- **The Planning, Environment, and Realty R&D Program** provides tools and processes to integrate resiliency, safety, economic competitiveness, and accelerating project delivery into planning, project development, design, and real estate acquisition for multimodal transportation projects. The data-driven approach to improve environmental processes will promote transportation decision-making and help agencies efficiently manage their resources while delivering better decisions and outcomes for their investments.

FHWA will develop resources to advance Complete Streets and provide strategies to implement safe multimodal networks and increase access for all users. FHWA will also develop tools and resources to ensure environmental justice, traditionally underserved populations, and equity considerations are addressed during the transportation planning and project development process. These tools will provide guidance on public participation, data collection, and analysis for achieving equitable outcomes.

The program will develop the next generation of transportation models and scenario planning tools and look at the impact emerging technologies can have on system performance. Additionally, FHWA develops innovative tools for natural resources and human environment analyses and activities, including programmatic approaches for project review, interagency coordination, and IIA implementation support to include activities such as stormwater best practices, aquatic organism passage, and wildlife crossing safety.

FHWA continues to focus on investments to address the climate crisis and strategies to reduce greenhouse gases to achieve net zero emissions by 2050. This includes adaptation and resiliency to climate change by developing and deploying tools and techniques to assess and improve the resiliency of transportation infrastructure to the effects of climate change and extreme weather. FHWA will work towards developing tools and resources to ensure environmental justice and equity considerations are carried out during the transportation planning, project development, and property acquisition processes, including development of a web-based community impact assessment course and research on improving bicycle and pedestrian access for persons with disabilities.

- **The Exploratory Advanced Research (EAR) Program** conducts longer-term, higher-risk research in all the research program areas. These research products have the potential for dramatic breakthroughs in transportation. For FY 2024, research topics may include open modeling frameworks that can increase the sustainability and resilience of the U.S. highway system and edge sensing, computing, and control systems that can improve the safety and mobility of vulnerable road users and underserved communities.
- **Strategic Innovation for Revenue Collection** provides grants to the following: a State or a group of States; a local government or a group of local governments; or a metropolitan planning organization to demonstrate user-based alternative revenue sources to maintain the long-term solvency of the Highway Trust Fund. The budget provides \$15 million annually to award grants designed to test innovative ways to replace or supplement the Federal gas tax.

- **The National Motor Vehicle Per Mile User Fee Pilot Program** establishes a national motor vehicle per-mile user fee demonstration and a Federal System Funding Alternative Advisory Board. It also enables the Department to carry out a public awareness campaign regarding a national motor vehicle per-mile user fee. The Secretary, in coordination with the Secretary of the Treasury, will test the design, acceptance, implementation, and financial sustainability of a national motor vehicle per-mile user fee designed to restore and maintain the long-term solvency of the Highway Trust Fund. In FY 2024, \$10 million will be used to carry out the pilot program.

Detailed Justification Technology and Innovation Deployment Program

What is the request and what funds are currently spent on the program?

FY 2024 – Technology and Innovation Deployment Program (\$110 million) (\$000)

Program	FY 2022 Actual	FY 2023 Enacted	FY 2024 Request
Research, Technology & Education Program ^{1/}			
Highway Research and Development Program	147,000	147,000	147,000
Technology and Innovation Deployment Program	110,000	110,000	110,000
Intelligent Transportation Systems Program	110,000	110,000	110,000
Training and Education	25,000	25,250	25,500
University Transportation Centers ^{2/}	99,000	99,500	100,000
Bureau of Transportation Statistics ^{2/}	26,000	26,250	26,500
State Planning & Research (SP&R planning portion) [Non-Add]	[737,475]	[752,300]	[767,420]
State Planning & Research (SP&R research portion) [Non-Add]	[245,825]	[250,767]	[255,807]
Total	517,000	518,000	519,000

1/ This program is funded through the Highway Trust Fund, with the exception of \$19 million from the General Fund in advance supplemental appropriations for University Transportation Centers.

2/ Administered by the Office of the Assistant Secretary for Research and Technology.

What is this program and what does this funding level support?

This request will enable the Department to accelerate the integration and adoption of proven innovative practices and technologies into standard usage to significantly improve safety, system efficiency, infrastructure, reliability and performance, and sustainable communities. The Technology Innovation and Deployment Program (TIDP) will fund efforts to advance research products into proven technologies and demonstrated practices; identify the market forces that will influence successful technology and innovation deployment; and plan and deliver effective technical assistance, training, communication, and outreach to promote rapid adoption of proven, market-ready technologies and innovations.

The TIDP reflects the Department’s approach to modernize infrastructure with safety, resilience, and all users in mind. The program will continue to foster innovation and actively accelerate the deployment of innovative technologies and practices that improve system safety, enhance project delivery, improve core transportation assets, support resiliency, address climate change, and transform our Nation’s infrastructure. The TIDP benefits all aspects of highway transportation and includes the following eligible activities:

- Deploying research results and products developed under the Highway Research and Development (HRD) program.
- Establishing and carrying out demonstration programs.
- Providing technical assistance and training to transportation agencies and stakeholders.
- Developing tools and methods to enhance and accelerate the adoption of proven innovative practices and technologies into standard usage.

This program will support the deployment of proven technologies and transportation-related innovations and processes through financial and technical assistance, training, peer exchanges, collaboration with industry groups, information, and knowledge exchange. Through its oversight role, FHWA will evaluate the deployment methods to determine effectiveness, assess needed improvements, and document outcomes.

In the early stages, as an innovation or new technology moves from research to development, FHWA will seek out willing State, local, and Tribal transportation agencies to pilot new technologies or be early adopters. These early adopters often receive financial and technical assistance to mitigate the increased risk of piloting new technologies or initiatives.

As an innovation or new technology becomes more mature and is ready for more widespread use, training aids will be developed for delivery and early adopters often become “lead” States. Lead States share best practices, challenges, and successes and encourage others to adopt the innovation. Peer exchanges and pooled funds are used to encourage States or other transportation agencies to directly share knowledge and information and transfer technology.

The TIDP will promote proven, market-ready technologies and innovations. Specific programs will provide resources that enable States and local agencies to accelerate the speed with which innovative technologies and practices enter into standard usage. FHWA Resource Center technical specialists, program office subject matter specialists, and field office personnel will work with State and local agencies to encourage the use of these technologies and practices by their peers as they are best positioned to discuss how these innovations address specific transportation issues and provide benefits and efficiencies.

The TIDP is administered in conjunction with the HRD Program and supports the Training and Education Program (T&E), the Intelligent Transportation System (ITS) Program, and the State Planning and Research (SP&R) Program.

What benefits will be provided to the American public through this request and why is this program necessary?

Key stakeholders and beneficiaries from this program include State transportation agencies, Federal Land Management agencies (FLMAs), local public agencies, Tribal transportation agencies, and industry groups. FHWA’s technology deployment programs contained within TIDP seek to improve safety and performance, enhance infrastructure design and construction, and provide data and analyses to decision-makers throughout the transportation community. The primary programs to accomplish these goals are:

- Every Day Counts program (EDC): A State and local-based program that identifies and rapidly deploys proven, yet underutilized market-ready innovations that make our transportation system adaptable, sustainable, equitable and safer for all. Proven innovations promoted through EDC facilitate greater efficiency at the State, local and Tribal levels, saving time, money and resources that ensure our infrastructure is built better, faster, and smarter. Through its activities, the EDC program addresses a number of the Secretary's key priorities and provides transportation agencies with training, technical support, tools, and resources to advance stakeholder-selected innovations in a manner that best meets their needs. Each State has used 20 or more of the 52 innovations promoted through EDC since the program's inception, and some States have deployed more than 45. In December 2022, FHWA announced the latest, seventh round of transportation innovations through the EDC. EDC-7 innovations will prioritize improving safety for all road users, building a sustainable infrastructure for the future, and growing an inclusive workforce.

As part of the White House's Action Plan for Accelerating Infrastructure, the Department of Transportation recently committed to expanding the EDC model to more modes of transportation. The new round of innovations is being promoted by FHWA and the Federal Transit Administration and will improve project delivery across highway, rail, and transit agencies at the State and local level.

- Accelerated Innovation Deployment (AID) Demonstration program: Provides funding to support the pilot/demonstration of innovations on projects by State DOTs, FLMAs, Tribal governments, metropolitan planning organizations (MPOs), and local governments. Funds will be made available to cover the cost of implementation of an innovation on a project in areas such as planning, financing, operations, pavements, structures, materials, environment, and construction. FHWA established the AID Demonstration program to provide transportation agencies the resources to mitigate risks associated with first-time or early adoption of innovations on transportation projects.
- Accelerating Market Readiness (AMR) program: Supports the advancement of emerging and transformative innovations by matching these innovations to the transportation organizations interested in testing and evaluating them. The AMR program will provide resources for the rapid national assessment of emerging innovations and for the development of objective written documentation of these assessments. The AMR program is intended to help advance the innovations to a more complete market-ready status, which in turn should accelerate the adoption of the innovations by transportation agencies under the EDC program or by other initiatives.
- State Transportation Innovation Council (STIC) Incentive program: The STIC brings together public and private transportation stakeholders to evaluate innovations and spearhead their deployment in each State and across all communities. The STIC Incentive program provides technical assistance and resources to support the standardizing of innovative practices in a State transportation agency or by other public sector STIC stakeholders.

- Accelerated Deployment of Pavement Technologies (AIDPT): This program was established in MAP-21 and continued in both the FAST Act and the IIJA. The program provides a coordinated and cohesive approach to advance research and development of technologies with deployment activities. Activities are focused on providing tools, technologies, and guidance, and supporting updated policies, to improve the safety, durability, sustainability and cost-effectiveness of highway pavements, and the materials from which highway infrastructure is constructed. Many of these technologies are advanced through demonstration projects, as well as pooled fund projects in addition to EDC and AID programs.
- Innovation Implementation Deployment Management: FHWA programs and the FHWA Resource Center will use TIDP funding to conduct technology and innovation deployment on other program priorities, provide technical resources to support the implementation of innovations, and develop appropriate guidance to aid in deployment.
- Advanced Transportation Technologies and Innovative Mobility Deployment which was renamed by FHWA as the Advanced Transportation Technology and Innovation (ATTAIN) Program: Funded out of the HRD, TIDP, and ITS programs, this program (formerly known as the Advanced Transportation and Congestion Management Technologies Deployment Program) will award grants to States and other entities to: improve the mobility of people and goods; improve the durability and extend the life of transportation infrastructure; reduce costs and improve return on investments; protect the environment and deliver environmental benefits; measure and improve operational performance; reduce the number and severity of traffic crashes and increase driver, passenger, and pedestrian safety; collect, disseminate, and use real-time transportation-related information; facilitate account-based payments for transportation access and services and integrate payment systems across modes; monitor transportation assets; deliver economic benefits by reducing delays, improving system performance, and providing for the efficient and reliable movement of goods and services; accelerate the deployment of connected/autonomous vehicles technologies; or incentivize travelers to share or shift trips depending on travel demand and system capacity. The ATTAIN program will receive \$60 million in FY 2024 set-aside from the HRD, TIDP, and ITS programs. In August 2022, FHWA awarded \$45 million for 10 projects that use advanced intelligent transportation systems) technologies that improve mobility and safety, reduce congestion and support underserved communities.
- Accelerated Implementation and Deployment of Advanced Digital Construction Management Systems (ADCMS): ADCMS are market-ready digital technologies and processes for management of construction and engineering activities, including systems for infrastructure planning and coordination, construction, maintenance, modernization and management, asset management systems for machines, site equipment, and personnel. The purpose of the ADCMS Program is to promote, implement, deploy, demonstrate, showcase, support, and document the application of ADCMS, practices, performance, and benefits. One of the ADCMS program goals is to enable data integration and sharing to provide greater access, transparency, and efficiency.

Detailed Justification Intelligent Transportation Systems Program (ITS)

What is the request and what funds are currently spent on the program?

FY 2024 – Intelligent Transportation Systems Program (\$110 million) (\$000)

Program	FY 2022 Actual	FY 2023 Enacted	FY 2024 Request

1/ This program is funded through the Highway Trust Fund, with the exception of \$19 million from the General Fund in advance supplemental appropriations for University Transportation Centers.

2/ Administered by the Office of the Assistant Secretary for Research and Technology.

What is this program and what does this funding level support?

The Intelligent Transportation Systems (ITS) Program supports the Secretary’s priorities by fostering innovation in transportation through the development and deployment of interoperable advanced systems and technologies that transform and enhance safety and efficiency while reducing environmental impacts of surface transportation, resulting in improved access and convenience, saved lives and time, and increased productivity. The ITS Program strategically leverages technological evolution, taking advantage of Information and Communications Technology (ICT) advances in: cybersecurity, automation, and Artificial Intelligence (AI), among others, via cooperation with industry, academia, State, local, Tribal, and Territorial (SLTT) transportation operating agencies, vehicle and device manufacturers, and transportation application and service developers. The Program robustly supports all five key priorities of the Secretary’s FY 2024 Budget: 1) Safety; 2) Economic Strength; 3) Ensuring Investments Meet Equity and Economic Inclusion Goals; 4) Climate and Sustainability; and 5) Transformation of our Nation’s Transportation Infrastructure.

The ITS Joint Program Office (JPO) is responsible for coordinating the ITS Program and technology advancement initiatives among all Department of Transportation (DOT) operating administrations. The research builds on and leverages the technology and applications developed across all modes to establish multi-modal and seamless interoperable transportation opportunities which are delivered through cross cutting research activities and technology transfer that support the entirety of the Department.

The ITS JPO serves as the Department's multi-modal technology research program, working toward improving transportation safety, mobility, and efficiency; while enhancing productivity, equity, convenience, and resiliency through the integration of innovative and interoperable technologies within the Nation's surface transportation system. Through these efforts, the ITS JPO serves as a Departmental leader in addressing the Secretary's priority of Transformation of our Nation's transportation infrastructure by implementing intelligent technology.

The Vision of the ITS JPO is to "Accelerate the use of ITS to transform the way society moves." That vision is executed through leadership and collaboration to advance research, development of new and adaptation of existing technologies, and implementation of intelligent transportation systems. Through this undertaking, the ITS JPO serves as the DOT's organizational resource for avoiding duplication and ensuring the Department is on the forefront of technological transformation to make certain our transportation system is safe, efficient, and resilient. In addition to providing funding for deployment program support, the ITS Program supports research, evaluation, and technology transfer within the following six program categories: ITS4US Deployment Program, Automation, Emerging/Enabling Technologies, Cybersecurity for Intelligent Transportation Systems, Accelerating Deployment, and Data Access and Exchanges.

ITS4US Deployment Program: ITS4US Deployment Program enables communities to deploy innovative technologies, partnerships, and practices that promote independent mobility for all, regardless of location, income, race, ethnicity, or disability. The program is designed in three phases (planning, design and testing, and operation and evaluation) to bring publicly and privately sponsored research together to create large-scale, replicable, and integrated ITS and other emerging technology deployments to address the challenges of planning and executing all segments of a complete trip. The Program leverages innovative technologies that improve mobility options for all travelers, including travelers with disabilities, travelers from rural areas, lower income travelers, and those historically excluded from the transportation system. This program embodies the Administration's priorities of transportation equity, economic growth, sustainability, and most importantly, compassion and inclusivity. The program funds multiple large-scale replicable deployments in three phases: concept development, design and testing, and operations and evaluation. In 2022, the four deployment sites completed the concept development phase of each of their projects. The USDOT awarded four teams with Phase 2 funding to support the design and testing of their projects based on their Phase 1 concepts. All ITS4US Phase 1 deliverables are now publicly available online on the ITS4US website.

Automation: The ITS JPO's automation research is a component of the Department's vision of supporting the safe, reliable, equitable, efficient, resilient, and cost-effective interoperable integration of automation into the broader multimodal transportation system. Driving automation is one of the major transportation industry trends of this decade. Through close collaboration and

monitoring of current industry and academic technology innovators and leaders in automation, the ITS JPO continues the pursuit of goals supporting the safe and beneficial deployment of an automated future. Advanced Driver Assistance Systems (ADAS) with automation of lateral or longitudinal controls are widely available in passenger vehicles, although their development and refinement continue. Automated Driving System (ADS)-equipped vehicles are being piloted in passenger vehicles, commercial motor vehicles, and transit buses. While driving automation research has been, to some degree, mainstreamed across the Department's Operating Administrations, research needs are evolving alongside the technology. The technological and practical challenges of translating research breakthroughs into daily transportation are significant and often are not fully understood at the outset. Many foundational questions around ADS and ADAS cannot be resolved until more and better data are available. The ITS JPO Automation Program's collaborative and multi-modal research portfolio provides cross-cutting support across DOT.

Emerging / Enabling Technologies: The Emerging/Enabling Technologies Program focuses on cultivating the next generation of ICT including wireless communications and enabling technologies for transportation systems. Transformative technological advances, along with new functionality, applications, operational concepts, and disruptive innovations, are tracked, assessed, and tested under varying transportation conditions so that SLTT agencies have the information needed to plan for, invest in, and implement with assurances of their safety and effectiveness. Current examples of these Emerging/Enabling technologies include interoperable connectivity, next generation wireless communications, and digital infrastructure; all of which have the potential to greatly impact transportation networks. This program also includes a focus on the emerging technologies for resiliency and climate change, for which the ITS JPO will leverage past and current ITS and environmental research into new, innovative research and analysis opportunities in partnership with modal administrations and stakeholders.

Because technological change is driven by worldwide creativity and investments, the ITS JPO tracks technological, market, and demographic trends domestically, throughout the globe, and across industries to seek, evaluate, and sometimes incubate emerging capabilities that demonstrate the potential to transform transportation. As new opportunities emerge, the Department will be positioned and engaged as a partner to guide research, development, and technology adoption in a systematic manner. Through multi-modal coordination, duplicative ITS work can be avoided and efficient allocation of ITS resources achieved. Together, these activities support safety; create economic strength and improve core assets; address climate change and transform our Nation's transportation infrastructure by ensuring new ITS technologies are evaluated and deployed safely while enhancing productivity, equity, and resiliency.

Cybersecurity for Intelligent Transportation Systems: Security and resiliency are a necessary precondition to deploy, operate, and maintain interoperable, safe, effective, and efficient ITS deployments. The Department's ITS Cybersecurity Research Program supports research needed to facilitate adaption and implementation of ICT cybersecurity best practices across the diverse and complex ITS system of systems; including infrastructure and connectivity needs along with supporting research needed to meet ITS-specific needs.

These efforts are conducted in cooperation with stakeholder communities to support well-informed implementations by the diverse community of Infrastructure Owner Operators (IOO) including SLTT agencies, private and public-private facility operators, along with vehicles and other mobile participants in the transportation system. While individual IOOs may have limited capabilities in this area; DOT-led collaboration, informed by ICT best practices including those recommended by the National Institute of Standards and Technology (NIST) and the Department of Homeland Security's Cybersecurity and Infrastructure Security Agency (CISA), can support widespread interoperable integration of suitable security and resiliency across complex ITS implementations using a broad range of equipment – some new, some decades old.

Accelerating Deployment: As new ITS technologies and systems evolve into market-ready products, the ITS Accelerating Deployment Program is addressing questions associated with adoption and deployment. The goal of the Accelerating Deployment Program is to speed up the evolution of ITS research and prototypes towards deployment of interoperable market-ready technologies that are commercially viable and adopted by the transportation community, a goal that is directly reflected in the Secretary's priority: Transformation of our Nation's Transportation Infrastructure. This Program provides communication and education support to facilitate awareness, understanding, acceptance, adoption, and deployment of ITS technologies across stakeholder groups; and builds effective partnerships at various levels – executive, program, and project.

The ITS JPO seeks to spur adoption of technology, and help stakeholders and localities deploy maturing ITS systems. The ITS Program provides knowledge transfer, while additionally supporting technical assistance, training, outreach, program evaluation, and other stakeholder engagement. The National ITS Architecture reference currently supports 150+ ITS services, evolving with technological advancements, research results and changing stakeholder needs. This architecture reference and companion software toolsets identify suitable standards for interoperable, secure ITS Regional and project architectures tailored to SLTT needs while supporting nationwide and cross-border interoperability along with regulatory compliance. The ITS Standards Program identifies and adapts ICT standards for ITS needs and supports extensive stakeholder-driven development and publication of ITS-specific technical standards needed for interoperable, effective, and secure ITS deployments in cooperation with Standards Development Organizations (SDO) following Systems Engineering principles. Both architecture and standards programs provide extensive deployment support to SLTT agencies.

Data Access and Exchanges: This research area focuses on facilitating effective generation, acquisition, governance, management, and analysis of ITS data and code in support of ITS research and support deployment of innovations in operations. This will be done while also enabling access data and source code generated through DOT's ITS research investments, to accelerate deployment of new ITS technologies, cut the time from research to insight and policy-making, and drive secondary research results. This, in turn, increases return on Federal investment in research and demonstration projects and accelerates multi-modal, data-driven, trusted evaluations of potential safety, mobility, equity, and other benefits to inform future policy and investment decisions. This will enable broader ITS research and deployment activities, which may drive implementation of various Federal and DOT directives on increasing access to

data, source code, and federally funded research results. Consistent with the ITS JPO strategic plan, this research area will also continue to help identify, prioritize, monitor, ITS data.

What benefits will be provided to the American public through this request and why is this program necessary?

The ITS JPO includes a portfolio of rigorous research, development and technology deployment support intended to optimize public benefit to transportation from technological transformation via large-scale interoperable deployments that enhance safety and mobility. The ITS Program achieves this vision through work on a diverse set of systems and technologies and their foundational enabling elements (architecture, standards, cybersecurity/resiliency) along with a focus on achieving operational and cost efficiencies through system-of-systems interoperability to deliver seamless and accessible transportation for the Nation. This work is directly aligned with DOT's mission of ensuring the Nation has the safest, most efficient, and modern transportation system in the world. The Program's work is designed to leverage rapidly occurring public and private innovations which will allow the Program, in FY 2024, to continue serving as an innovative hub for all aspects of American transportation, from automation and digital infrastructure/data to accessibility and cybersecurity.

Additionally, the ITS Program supports a variety of knowledge and technology transfer opportunities in collaboration with other stakeholders. The ITS Program provides training and educational opportunities through many outlets and methods to provide multidisciplinary and multimodal stakeholders with the services needed to plan, design, procure, implement, operate, maintain, and manage innovative transportation technologies. The ITS Program supports advancing ITS research, from initial adoption to interoperable, safe, secure, and effective large-scale deployment to broadly benefit transportation needs, including an on-going evaluation of benefits and lessons learned to facilitate the transfer of knowledge to the American public and to inform future developments.

Detailed Justification Training and Education Program

What is the request and what funds are currently spent on the program?

FY 2024 – Training and Education (\$25.5 million) (\$000)

Program	FY 2022 Actual	FY 2023 Enacted	FY 2024 Request
Research, Technology & Education Program ^{1/}			
Highway Research and Development Program	147,000	147,000	147,000
Technology and Innovation Deployment Program	110,000	110,000	110,000
Intelligent Transportation Systems Program	110,000	110,000	110,000
Training and Education	25,000	25,250	25,500
University Transportation Centers ^{2/}	99,000	99,500	100,000
Bureau of Transportation Statistics ^{2/}	26,000	26,250	26,500
State Planning & Research (SP&R planning portion) [Non-Add]	[737,475]	[752,300]	[767,420]
State Planning & Research (SP&R research portion) [Non-Add]	[245,825]	[250,767]	[255,807]
Total	517,000	518,000	519,000

1/ This program is funded through the Highway Trust Fund, with the exception of \$19 million from the General Fund in advance supplemental appropriations for University Transportation Centers.

2/ Administered by the Office of the Assistant Secretary for Research and Technology.

What is this program and what does this funding level support?

T&E is responsible for the training and professional capacity building of the current and future transportation workforce, transferring knowledge quickly and effectively to and among transportation professionals, and providing education solutions throughout the full innovation lifecycle.

T&E provides a wide variety of services and products:

- *The National Highway Institute (NHI)* delivers quality training for transportation professionals through a broad range of continuously evolving courses and delivery options. NHI's course catalog includes nearly 400 training courses in more than 18 transportation industry-related program areas. The delivery options span the spectrum from web-based training, available any time of day, to in-person training. The delivery

options integrate the latest digital tools, adult learning models, and industry model advancements, and are designed and developed in collaboration with professionals from FHWA, State and local agencies, and industry partners. For FY 2022, NHI delivered 540 total instructor-led training courses reaching over 10,200 learners. Also, in FY22, NHI's self-directed web-based training reached 58,206 learners. The course content is routinely and continuously reviewed and updated to incorporate innovative technologies and practices. As an accredited provider, NHI offers individuals receiving training an opportunity to earn continuing education units (CEUs) toward their professional credentials. Through this effort, NHI's training solutions along with innovative curriculum and delivery methods will build new skills and improve the professional capacity of America's transportation workforce.

- *The Local and Tribal Technical Assistance Programs (LTAP/TTAP)* deliver training, technical assistance and technology transfer tailored to the needs and capacity of local public agencies and Tribal governments. Deployed and administered in concert with State transportation agencies, the LTAP maintains and builds the local public agencies' professional capacity as their workforce is responsible for networks that are an integral and vital component of the Nation's transportation system. Serving a comparable function for the Native American Tribal Governments across the U.S., the TTAP is deployed and administered by FHWA. Both programs consider and integrate innovative technologies and practices into the resources they provide.
- *Education/Academic Programs* provide opportunities for potential and new entrants into the transportation workforce to acquire the skills and professional capacity to improve system performance. From early education through post graduate work, these programs focus on attracting, retaining, and advancing the transportation workforce by building awareness and interest in transportation career options; promoting an understanding of the positive impact transportation has on mobility and economic opportunity; and encouraging professionals to take the next steps in their careers through skills acquisition and enhancement. Many programs place a particular emphasis on reaching women, minorities, and disadvantaged groups and address transportation equity.
 - The Dwight David Eisenhower Transportation Fellowship Program (DDETFP) advances the U.S. transportation workforce by attracting the Nation's brightest minds and encouraging students from the community college level through the doctorate level to pursue careers in a transportation-related field by awarding grants to qualified students. The DDETFP enhances racial equity by providing opportunities to students enrolled in minority serving institutions of higher learning.
 - The Garrett A. Morgan Technology and Transportation Education Program promotes science, technology, engineering, and mathematics (STEM) applications with a transportation focus at elementary and secondary school levels to engage young minds, particularly women and minorities, toward the pursuit of a career in transportation.

- *The Transportation Education and Training Development and Deployment Program* works collaboratively with the academic community and State departments of transportation to evaluate current and future skills and training needs at all levels of the transportation workforce and to develop, test, review, and implement new curricula and education programs to meet those needs with a focus on enhancing equity in transportation education development and deployment.
- *The Transportation Centers for Excellence* provide technical assistance, information sharing of best practices, and training in the use of tools and decision-making processes that can assist States in effectively implementing surface transportation programs, projects, and policies. The three areas of focus are:
 - transportation safety;
 - project finance; and,
 - environmental stewardship, including innovative ways to streamline the transportation delivery process.

What benefits will be provided to the American public through this request and why is this program necessary?

The Training and Education (T&E) Program provides resources for the development and delivery of technical assistance, training, professional development, and education programs to improve the professional capacity of the workforce that manages, develops and maintains the Nation's highway system. It provides educational and professional capacity building opportunities and resources to the surface transportation community by routinely updating and delivering training and technical assistance on core competencies; identifying and developing training and technical assistance needs for emerging competencies and new skills; actively promoting technology transfer and innovative practices into the transportation workforce; and actively supporting the successive generations of transportation professionals in the acquisition of their advanced degrees.

This request enables the Department to directly support a key underpinning of a safe, efficient, and environmentally sound surface transportation system - improving the skills and increasing the knowledge of the current and future transportation workforce. By improving the current and future workforce, this program will advance the safety of the Nation's highways, promote economic stability, improve core assets, ensure investments meet equity and economic inclusion goals, address climate change, and contribute to the transformation of our Nation's transportation infrastructure to better meet the needs of the future.

The professional capacity and abilities of the transportation workforce are essential elements in the effective, efficient, and equitable development, maintenance, operation and expansion of the Nation's transportation system. The deployment of innovative methods, practices, and technologies that improve safety, system performance, sustainability, resilience, climate solutions, reliability and economic competitiveness relies on the ability of the transportation workforce to absorb knowledge quickly and on the continuous building of professional capacity and skills. The T&E program advances strategies to meet emerging workforce challenges through the delivery of technical assistance, training, professional capacity building, and education programs that develop appropriately skilled and prepared transportation workers and

directly supports the strategic objective for workforce development. The T&E program addresses the Secretary's priorities of safety, transportation equity, climate solutions, and includes these priorities as evaluation factors for the development of training and education development and dissemination.

The T&E program is administered in conjunction with the Highway Research and Development (HRD) Program and supports the Technology and Innovation Deployment Program (TIDP), the Intelligent Transportation System (ITS) Program, and the State Planning and Research (SP&R) Program.

Detailed Justification State Planning and Research

What is the request and what funds are currently spent on the program?

FY 2024 – State Planning and Research
(Planning: \$767 million; Research: \$256 million)
(\$000)

Program	FY 2022 Actual	FY 2023 Enacted	FY 2024 Request
Research, Technology & Education Program ^{1/}			
Highway Research and Development Program	147,000	147,000	147,000
Technology and Innovation Deployment Program	110,000	110,000	110,000
Intelligent Transportation Systems Program	110,000	110,000	110,000
Training and Education	25,000	25,250	25,500
University Transportation Centers ^{2/}	99,000	99,500	100,000
Bureau of Transportation Statistics ^{2/}	26,000	26,250	26,500
State Planning & Research (SP&R planning portion) [Non-Add]	[737,475]	[752,300]	[767,420]
State Planning & Research (SP&R research portion) [Non-Add]	[245,825]	[250,767]	[255,807]
Total	517,000	518,000	519,000

1/ This program is funded through the Highway Trust Fund, with the exception of \$19 million from the General Fund in advance supplemental appropriations for University Transportation Centers.

2/ Administered by the Office of the Assistant Secretary for Research and Technology.

What is this program and what does this funding level support?

The State Planning and Research (SPR) Program provides funds to support the States' transportation planning (SPR-Subpart A) and research, development, and technology transfer (RD&T) activities (SPR-Subpart B).

Funding for the total SPR Program comes from two percent set-aside from each State's apportionments of five programs: National Highway Performance Program (NHPP); Surface Transportation Block Grant Program (STBG); Highway Safety Improvement Program (HSIP); Congestion Mitigation Air Quality Improvement Program (CMAQ); and National Highway Freight Program (NHFP).

SPR-Subpart A funding represents a maximum of 75 percent of the State's total SPR Program, which is used by the States to establish a continuous, comprehensive, and cooperative (3-C) statewide transportation planning process. Eligible SPR-Subpart A activities per 23 U.S.C. 505 (a) include:

- Engineering and economic surveys and investigations.
- The planning of future highway programs and local public transportation systems and the planning of the financing of such programs and systems, including metropolitan and statewide planning under United States Code sections 134 and 135.
- Development and implementation of management systems, plans, and processes under United States Code sections 119, 148, 149, and 167.
- Studies of the economy, safety, and convenience of surface transportation systems and the desirable regulation and equitable taxation of such systems.
- The conduct of activities relating to the planning of real-time monitoring elements.

SPR-B funding represents a minimum 25 percent of the State's total SPR Program, which is used to support the States' research, development, and technology transfer (RD&T) activities. These funds are used to establish a comprehensive management process to identify, prioritize, conduct, and evaluate transportation research at the State level. Eligible SPR-Subpart B activities per 23 U.S.C. 505 (a) include:

- Research, development, and technology transfer activities necessary in connection with the planning, design, construction, management, and maintenance of highway, public transportation, and intermodal transportation systems.
- Study, research and training on the engineering standards and construction materials for transportation systems described in the previous bullet, including the evaluation and accreditation of inspection and testing, and the regulation and taxation of their use.

Additionally, the IIJA requires each State to use not less than 2.5 percent of its SPR funds on specified planning activities to increase safe and accessible options for multiple travel modes for people of all ages and abilities (similarly, an MPO must use not less than 2.5 percent of its Metropolitan Planning Program funds). However, a State or MPO, with the approval of the Secretary, may opt out of the requirement if the State or MPO has Complete Streets standards and policies in place, and has developed an up-to-date Complete Streets prioritization plan that identifies a specific list of Complete Streets projects to improve the safety, mobility, or accessibility of a street.

What benefits will be provided to the American public through this request and why is this program necessary?

The FHWA SPR-Subpart-A program provides funding for the States to meet State-identified transportation planning needs and enables the States to foster innovation, invest in their infrastructure, and address the needs of all communities. This request supports the Secretary's strategic goals of Economic Strength and Global Competitiveness, Equity, and Transformation by helping State DOTs make investments that improve the Nation's transportation system in a safe, equitable, transparent, and accountable manner while engaging the public, elected officials, and other stakeholders in the process. States will then use Federal transportation funds more

efficiently and effectively to focus on the national performance goal areas and the goals of the IJA. Examples of products that States produce using SPR-Subpart-A program include the Long-Range Statewide Transportation Plan, Statewide Transportation Improvement Program (STIP), regional and corridor studies, data collection such as traffic counts, and forecasts of future transportation demand.

The FHWA SPR-Subpart-B program supports the Secretary's priorities by providing funding for the States to meet State-identified research needs. Using the research management process, high priority is given to applied research on: State or regional problems, transfer of technologies from researchers to users, and research for setting standards and specifications. This results in better informed strategic goals that balance safety, economic growth, equity, climate solutions and infrastructure preservation (with renewed emphasis on planning for a resilient transportation network). The States may adapt findings to practical applications by developing and transferring new technologies. Additionally, the program promotes enhanced collaboration with transportation stakeholders.

FHWA works with State Departments of Transportation (State DOTs) to administer the SPR-Subpart-B program. The State DOTs can use their SPR-B funds to address specific needs within their State or pool their contributions through different mechanisms to further leverage their funds.

States may use their SPR-B funds to do internal research. One example of this is a recently completed study conducted by the Iowa DOT, which focuses on updating Iowa DOT's current specifications for the design of a bridge pier system under expected truck collision loads to reflect recent updates to the AASHTO LRFD Bridge Design Specifications. The study will also introduce new specifications for a three-column frame pier that could be used as a standard design under collision.

In addition to providing stewardship and oversight of SPR-Subpart-B program, FHWA works with State DOTs on the National Cooperative Highway Research Program (NCHRP), which is a State-driven program to address issues integral to State DOTs using SPR funds. The NCHRP program, which is funded by SPR-Subpart-B contributions, funds projects that are selected by the States through the American Association of State Highway and Transportation Officials (AASHTO) Special Committee on Research and Innovation. The NCHRP program has a long history of developing valuable tools, innovations, and resources for the States. A recent example is NCHRP Report 897: *Tools to Facilitate Implementation of Effective Metropolitan Freight Transportation Strategies*. This report provides transportation practitioners and decision makers with guidance for implementing effective metropolitan freight transportation strategies.

FHWA also administers the Transportation Pooled Fund (TPF) Program which enables State DOTs, and other public and private entities, to combine resources to address transportation-related challenges. By combining efforts and resources on high-priority highway research topics, our Nation's transportation agencies can advance solutions that increase safety, stimulate economic growth, advance equity, facilitate transformation and improve climate resilience. In pooling funds and expertise, States, FHWA and other transportation partners develop innovative

solutions while extending the reach and impact of their research. The TPF studies often result in institutionalized practices that provide wide-ranging national benefits.

One example of this is a pooled fund study led by FHWA with over 43 partner States that evaluates low-cost safety improvement countermeasures. One of the greatest successes of this study is the now proven safety countermeasures have become institutionalized practices with States across the country to help reduce fatalities and injuries. Minnesota Department of Transportation is also leading a TPF study to help agencies make equitable decisions in transportation planning. With contributions from eleven other State DOTs, the TPF study will provide an updated national data set to determine transportation equity and reveal how the costs and benefits of transportation investments are distributed. This dataset can be used by agencies throughout the country to make more equitable transportation decisions.

This Page Left Blank Intentionally

Executive Summary

Prioritization Process Pilot Program

What is the request and what funds are currently spent on the program?

The FY 2024 budget includes \$10 million for the Prioritization Process Pilot Program (PPPP). The IIJA provided \$10 million in both FY 2022 and FY 2023 for this program. This program is funded through the Highway Trust Fund.

What is this program and what does this funding level support?

The Prioritization Process Pilot Program awards discretionary grants to selected States and metropolitan planning organizations (MPOs) serving a population greater than 200,000 to fund the development and implementation of publicly accessible, transparent prioritization processes to assess and score projects according to locally determined priorities, and to use such evaluations to inform the selection of projects to include in transportation plans. The program will support data-driven approaches to planning that, on completion, can be evaluated for public benefit.

What benefits will be provided to the American public through this request and why is this program necessary?

FHWA recognizes that entrenched disparities in laws and public policies have denied equal opportunity to individuals and communities. FHWA is committed to advancing equity for all, embedding fairness in decision-making processes, and working to redress inequities in policies and programs that serve as barriers to equal opportunity. Through the development and implementation of an accessible, transparent, data-driven, and locally determined project evaluation and selection process, the Prioritization Process Pilot Program will support the Administration's goal of reducing inequities across our transportation systems and the communities they affect.

Detailed Justification Prioritization Process Pilot Program

What is the request and what funds are currently spent on the program?

FY 2024 – Prioritization Process Pilot Program (\$10 million) (\$000)

Program	FY 2022 Actual	FY 2023 Enacted	FY 2024 Request
Prioritization Process Pilot Program	10,000	10,000	10,000
Total	10,000	10,000	10,000

What is this program and what does this funding level support?

The Prioritization Process Pilot Program awards grants to selected States and MPOs serving urbanized areas over 200,000 to fund the development and implementation of publicly accessible, transparent prioritization processes to assess and score projects according to locally determined priorities, and to use such evaluations to inform the selection of projects to include in transportation plans and transportation improvement programs. The program will support data-driven approaches to planning that, on completion, can be evaluated for public benefit. The maximum amount of a grant under this program is \$2 million.

If a grant recipient has fully implemented a prioritization process, they may use any additional remaining grant funds for any transportation planning purpose. If the inclusion or exclusion of a project on a transportation improvement program or statewide transportation improvement program deviates from the long-term transportation plan, the eligible entity is required to provide a public explanation for the decision.

What benefits will be provided to the American public through this request and why is this program necessary?

The program will encourage States and MPOs to develop transparent and accountable processes to guide project selection in the development of the transportation plan and transportation improvement program and will lead to the development of data-driven approaches to planning that can be evaluated for public benefit. The process will assess and score projects on the basis of priority objectives that are developed by the State or MPO for their local area, and on the basis of their contribution and benefits toward meeting the priority objectives for the area, the costs of the project or strategy relative to the contribution and benefits, and public support. The process will lead to the development of a prioritized list of projects, include an opportunity for public input, and will support equitable transportation decision-making.

Executive Summary

Reconnecting Communities Pilot Program

What is the request and what funds are currently spent on the program?

The FY 2024 budget includes \$200 million for the Reconnecting Communities Pilot Program. Of this amount, \$100 million is advance supplemental appropriations from the General and \$100 million is funded through the Highway Trust Fund. In FY 2022, \$195 million was provided for this program, of which \$100 million is advance supplemental appropriations from the General and \$95 million was funded through the Highway Trust Fund. In FY 2023, \$198 million is provided for this program, of which \$100 million is advance supplemental appropriations from the General and \$98 million is funded through the Highway Trust Fund.

What is this program and what does this funding level support?

The Reconnecting Communities Pilot Program will provide planning, planning technical assistance, and capital construction grants to assess the feasibility and impacts of removing, or retrofitting existing transportation facilities that create barriers to mobility, or to carry out projects that remove, retrofit, or replace an eligible facility.

The planning grants study the feasibility and impacts of removing, retrofitting, or mitigating an existing eligible facility to restore community connectivity. The construction grants carry out the project which may include removing, retrofitting, mitigating, or replacing a facility. In addition, there are planning technical assistance grants to build organizational or community capacity to engage in transportation planning and identify innovative solutions to infrastructure challenges, including reconnecting communities.

What benefits will be provided to the American public through this request and why is this program necessary?

Our Nation's vast network of roads and bridges have connected communities from coast to coast and made it possible for people to access opportunities within their communities and beyond. However, past inequitable infrastructure decisions have at times divided and fragmented communities, which have often been home to historically disadvantaged peoples. Without access to safe and efficient transportation options, a community's ability to prosper, grow, and access opportunities is severely impacted. The Reconnecting Communities Pilot Program will support projects with the goal of redressing these historical inequities and providing equitable transportation.

Detailed Justification Reconnecting Communities Pilot Program

What is the request and what funds are currently spent on the program?

FY 2024 – Reconnecting Communities Pilot Program (\$200 million) (\$000)

Program	FY 2022 Actual	FY 2023 Enacted	FY 2024 Request
Reconnecting Communities Pilot Program	195,000	198,000	200,000
Total	195,000	198,000	200,000

What is this program and what does this funding level support?

The Reconnecting Communities Pilot Program will address ongoing inequities created when transportation infrastructure divides communities, creating environmental and community impacts and limiting mobility, access and/or economic development. The Program will award both planning and construction grants to:

- Study the feasibility and impacts of removing, retrofitting, or mitigating existing transportation facilities that create barriers to mobility, access, or economic development.
- Conduct planning activities necessary to design a project to remove, retrofit, or mitigate an existing eligible facility.
- Conduct construction activities necessary to carry out a project to remove, retrofit, or mitigate an existing eligible facility.

Eligible facilities include highways or other transportation facilities that create barriers to community connectivity, including barriers to mobility, access, or economic development, due to high speeds, grade separations, or other design factors.

The Federal share for a planning grant project may not exceed 80 percent, and a planning grant may not exceed \$2 million per recipient. The minimum award amount for a capital construction grant shall be \$5 million and the Federal share may not exceed 50 percent. The maximum Federal assistance provided for a project award may not exceed 80 percent.

What benefits will be provided to the American public through this request and why is this program necessary?

The development of the Interstate Highway System connected our country in ways it had not been previously, but, in some instances, it also fragmented neighborhoods and divided communities. Similar fragmentation has sometimes been created by other types of infrastructure

including rail lines. In these communities, the nearby highway or transportation facility creates real barriers to community cohesion and limits transportation and economic opportunities for some communities and community residents.

Transportation can play an important role in supporting community revitalization. As multimodal transportation systems connect Americans to employment, education, healthcare and other essential services, these infrastructure investments create jobs and benefit businesses, particularly small and disadvantaged business enterprises. Providing transportation options that connect urban and rural communities can also offer public health, safety, and air and water quality benefits, among others.

In September 2022, FHWA issued a Notice of Funding Opportunity for the Reconnecting Communities Pilot Program to fund planning efforts and projects with the goal of removing or retrofitting existing transportation facilities that create barriers to transportation within communities. In February 2023, DOT announced a historic \$185 million in grant awards for 45 construction and planning projects that prioritize transformative community-led solutions to help revitalize communities and provide access to jobs, while reducing pollution. In this first round of funding for the Reconnecting Communities Program, FHWA is awarding 39 planning grants and six capital construction grants.

Through this discretionary grant program, States, MPOs, nonprofit organizations, local governments, and Tribal Governments can apply for both planning grants to lay the groundwork for restoring community connectivity by correcting historical barriers to mobility, access, and economic development and construction grants for projects that mitigate or eliminate existing fragmentation and create new community connections.

This Page Left Blank Intentionally

Executive Summary

Wildlife Crossings Pilot Program

What is the request and what funds are currently spent on the program?

The FY 2024 budget requests \$70 million for the Wildlife Crossings Safety Pilot Program to provide grants to eligible recipients for projects designed to reduce wildlife-vehicle collisions (WVC) and improve habitat connectivity. The IJA provided \$60 million in FY 2022 and \$65 million in FY 2023 for this program. This program is funded through the Highway Trust Fund.

What is this program and what does this funding level support?

The Wildlife Crossings Safety Pilot Program is a competitive grant pilot program for projects that seek to achieve a reduction in the number of wildlife-vehicle collisions and improved habitat connectivity for terrestrial and aquatic species. The funding level will support a range of project types and include the full breadth of surface transportation project delivery starting with research and design through to construction activities.

The pilot program (23 U.S.C. 171) is complemented with legislative requirements under 23 U.S.C. 172, that promote outreach with a range of public and private stakeholders to leverage existing expertise, data, and tools to support the administration of this program. The early collaboration with stakeholders will support the efficient and effective delivery of this program through shared resources. In doing so, this funding can be targeted toward projects that yield the greatest safety outcomes to the traveling public while concurrently realizing the conservation and protection benefit to wildlife.

What benefits will be provided to the American public through this request and why is this program necessary?

The pilot program will benefit safety and reduce costs for the traveling public by reducing WVCs. In a 2008 study, the estimated cost of WVCs exceeded \$8 billion per year in injuries, deaths, and property damage. The savings from wildlife crossing structures generally exceed project costs when considering the reduced injuries, deaths, and property loss. The program will benefit wildlife conservation by improving habitat connectivity and species survival. Without the discretionary pilot program, States and other eligible recipients would continue to either eliminate or defer project designs that yield both safety and habitat protection benefits due to competing priorities thereby missing critical opportunities to save lives, preserve wildlife, and reduce property damage.

Detailed Justification Wildlife Crossings Pilot Program

What is the request and what funds are currently spent on the program?

FY 2024– Wildlife Crossings Pilot Program (\$70 million) (\$000)

Program	FY 2022 Actual	FY 2023 Enacted	FY 2024 Request
Wildlife Crossings Pilot Program	60,000	65,000	70,000
Total	60,000	65,000	70,000

What is this program and what does this funding level support?

The Wildlife Crossings Pilot Program is a competitive discretionary grant program for projects that increase the adoption of safety countermeasures for reducing WVCs. Funding directly supports projects administered through the State Departments of Transportation and Federal Lands Highway for an array of projects to a broad spectrum of awardees and partners, including Federal Agency partners, Tribes, local governments, non-governmental organizations, and institutions of higher education.

What benefits will be provided to the American public through this request and why is this program necessary?

This pilot program, authorized under the historic investments in the IJA, is one of many that will transform America’s transportation enterprise through DOT leadership, partnership, and timely execution of programs and projects that mutually support safety, equity, and the health of our planet, including the critical conservation and protection of our lands, waters, and wildlife.

The Wildlife Crossing Safety Pilot Program will benefit safety and reduce costs for the traveling public by reducing WVCs. Conflicts between vehicles and wildlife impact human safety and wildlife survivability across the United States. According to the National Highway Traffic Safety Administration (NHTSA), between 2013 and 2017 over 899 fatal crashes were caused by collisions with live animals. In addition to injury and death, WVCs can result in property damage, economic impacts, emotional trauma, secondary crashes, and travel delays. Significant costs can be associated with vehicle repair or replacement, while emergency response services and maintenance staff are often required to assist with the aftermath of a WVC.

Rural areas, including Tribal communities, experience higher collision rates compared to urbanized areas. These rural areas, where at least 60 percent of the funds must be spent, will benefit greatly from improved traveler safety and reduction in WVCs.

The Wildlife Crossings Pilot Program will accelerate the transformation of our Nation's transportation system to one that is safer for travelers and more accommodating to the needs of wildlife to move across the landscape.

This Page Left Blank Intentionally

Executive Summary

Administrative Expenses

What is the request and what funds are currently spent on the program?

The FY 2024 Budget includes \$486.8 million in contract authority for FHWA administrative expenses and an equal amount of Limitation on Administrative Expenses (LAE). In addition, the IJA provides \$86.8 million in appropriated budget authority for FHWA administrative expenses as takedowns from Highway Infrastructure Programs funding. The total administrative expenses funding level requested for FY 2024 is \$573.6 million.

In FY 2023, the IJA provided \$476.8 million in contract authority for administrative expenses and the annual appropriations act provided an equal amount of LAE. In addition, the IJA provided \$86.8 million in FY 2023 in appropriated budget authority for FHWA administrative expenses as takedowns from Highway Infrastructure Programs funding.

The contract authority amount includes \$3.2 million each fiscal year for administrative expenses of the Appalachian Regional Commission (ARC). The remainder is for FHWA General Operating Expenses (GOE).

What is this program and what does this funding level support?

This GOE funding level supports salaries and benefits for approximately 2,800 employees, as well as rent, communications, utilities, contractual services, travel, supplies, and equipment to support the delivery of FHWA's programs. The funding level requested for administrative expenses is essential for FHWA to effectively deliver and manage the \$70.3 billion highway program requested in the FY 2024 Budget and comprises less than 1 percent of the overall FHWA request.

What benefits will be provided to the American public through this request and why is this program necessary?

The IJA substantially increases funding for FHWA's ongoing programs continued from prior authorization acts while also authorizing a significant number of new programs. Without a properly staffed, trained, and equipped workforce, FHWA's programs would not be able to make roadways safer for all people, rehabilitate and repair roads and bridges, plan and construct equitable transportation infrastructure, address the climate change challenge, and deploy transportation innovations.

Detailed Justification Limitation on Administrative Expenses

What is the request and what funds are currently spent on the program?

FY 2024 – Limitation on Administrative Expenses (\$573.6 million) (\$000)

Program	FY 2022 Actual	FY 2023 Enacted	FY 2024 Request
Limitation on Administrative Expenses ^{1/}	466,965	476,784	486,800
Highway Infrastructure Programs (administrative takedown) ^{2/}	86,816	86,816	86,816
Total	553,781	563,600	573,616

1/ All fiscal years include FHWA General Operating Expenses (GOE) and transfers to the Appalachian Regional Commission (ARC) for administrative activities associated with the Appalachian Development Highway System (ADHS). Other non-administrative programs funded by set asides from administrative expenses are included in the Federal Allocation Programs justification.

2/ The IIJA provides funding for administrative expenses as takedowns from the Highway Infrastructure Programs (HIP). The HIP administrative expenses funding will be used for information technology investments, contractual services, and other investments and services to support the implementation and administration of the IIJA.

What is this program and what does this funding level support?

FHWA administrative expenses provides the resources necessary to maintain oversight and administrative operations for the FHWA’s programs. Funding supports activities to meet the FHWA strategic objectives and other Federal mandates. Additionally, funding supports administrative expenses for the ARC.

The majority of FHWA’s employees are located at 52 Division offices – one in each State; Washington, DC; and Puerto Rico. In addition, three Federal Lands Highway Program Field offices, a Resource Center, a network of 51 local centers across the Country and in Puerto Rico, and six Tribal Technical Assistance Program centers provide national support through technical assistance, training, and innovative technology deployment assistance for FHWA Division offices, State departments of transportation (DOTs), Federal land management agencies (FLMAs), metropolitan planning organizations (MPOs), Tribes, and local agencies. FHWA field staff work directly with State and local partners, other Federal agencies, and Tribes to oversee FHWA’s programs and assist these stakeholders in advancing projects.

FHWA’s Headquarters program staff provide national leadership and work directly with Division offices, States, and other stakeholders to advance FHWA’s programs. Some of the areas for which these offices provide national leadership include the following: making the Nation's roadways safer for all users; increasing transportation equity; combating climate change; increasing infrastructure resilience; deploying innovations; establishing performance

management standards and processes; overseeing bridge inspection; collaborating with other Federal agencies; and providing critical technical assistance to Division offices, States, and other stakeholders.

In addition, FHWA's Headquarters offices provide agency-wide support for FHWA's programs, including administration of information technology (IT) systems, such as those used to manage highway funding, or to report highway data; technical assistance on reauthorization and other legislation; and establishment and implementation of employee programs and training opportunities to maintain a skilled and knowledgeable workforce. Furthermore, these offices provide all legal, IT, policy, human resources, training, finance, budget, and acquisitions support for the entire agency.

Funding Request

The FY 2024 budget requests \$486.8 million in LAE for FHWA GOE, including \$3.2 million for administrative expenses of the ARC, and an additional \$86.8 million in budget authority as takedowns from Highway Infrastructure Programs funding, totaling \$573.6 million for FHWA administrative expenses.

FHWA Staffing Needs

The IJA significantly increased the funding levels for FHWA's ongoing programs while also authorizing a significant number of new programs. On average, including Highway Trust Fund funding and supplemental General Fund appropriations, the IJA provides \$70.3 billion for FHWA programs from FY 2022 through FY 2026. This is an increase of over \$25 billion compared to the average yearly funding provided by the Fixing America's Surface Transportation Act. In addition to this historic increase in funding, the IJA significantly increased the number of FHWA's programs. More than a dozen new programs were created, which support the Administration's goals of improving safety, fixing America's bridges and roads, ensuring transportation equity, and combating climate change. The new programs are a combination of formula programs that distribute funding based on statute and discretionary programs that will competitively award grants.

The IJA recognizes the need for a well-staffed and funded FHWA workforce by providing vital administrative funding through the Highway Trust Fund and as a takedown from several Highway Infrastructure Programs. FHWA will utilize this funding to ensure that the Administration's vision for building a better transportation system is well executed and realized. To this end, FHWA anticipates hiring 100 additional staff in FY 2023 and 60 additional staff in FY 2024. To achieve these hiring targets, FHWA plans to take several actions, including bringing onboard additional human resources staff/contractors, utilizing hiring flexibilities such as direct hire authority, and streamlining the hiring process through measures such as standardized vacancy announcements. This hiring will ensure that FHWA is appropriately staffed to implement FHWA's programs, which have increased in size and complexity under the IJA.

ARC Administrative Funding

The administrative funding estimate for ARC is included within FHWA's overall administrative expenses request. ARC administrative funds provide for salaries, benefits, travel, and related expenses for both ARC and FHWA employees that are working on the ADHS. The budget requests \$3.2 million for ARC administrative expenses, which is included in the overall LAE request of \$486.8 million.

What benefits will be provided to the American public through this request and why is this program necessary?

FHWA administrative funding is integral to the effective delivery of FHWA's programs in accordance with Federal laws and regulations. Through adequately funded administrative expenses, FHWA staff will have the necessary resources to support the Secretary's strategic goals.

IIJA Implementation

The additional funding for administrative expenses, provided by the IIJA, will allow FHWA staff to continue to successfully implement the IIJA. Since the enactment of the IIJA, FHWA has reached a number of significant milestones.

Distribution/Release of Funding (for formula & allocated programs)

- In June 2022, FHWA staff **opened a call for applications for the competitive Bridge Investment Program** established by the IIJA. In September 2022, the program awarded \$2.1 billion to four large bridge projects in five States: the Golden Gate Bridge in the City of San Francisco, Gold Star Memorial Bridge that carries I-95 traffic over the Thames River in Connecticut, the Brent Spence Bridge, which crosses the Ohio River at the Kentucky and Ohio border, and four bascule bridges over the Calumet River on the south side of Chicago. In addition, the program distributed \$20 million in competitive planning grants for 24 projects in 24 States. These planning grants will be used to create a pipeline of future bridge construction projects to improve safety, support economic competitiveness, and to provide resilient highway infrastructure that is better able to withstand the effects of climate change.
- In August 2022, FHWA **announced \$172.2 million in FY 2022 formula funding under BIL to 35 States and 3 territories to improve ferry service and provide more travel options**. Funding for ferry service is at historic levels to support multimodal transportation services that meet the needs of residents. The funding can also be used for capital improvements to existing ferry operations, which could increase the number of riders, relieve congestion, or address environmental or significant operational concerns.
- In October 2022, **FHWA distributed to States \$53.5 billion in FY 2023 Federal-aid highway formula funding and an additional \$6.4 billion in Highway Infrastructure Program formula funding** provided by the IIJA advance appropriation.

- Also, in February 2023, FHWA continued our commitment to safe, accessible, and efficient transportation in rural areas through the **release of dedicated funding provided by the annual appropriations act for the ADHS**. FHWA staff works closely with the ARC to promote innovation, partnership, and investment to build communities, strengthen the economy and improve socioeconomic conditions in Appalachia.
- Through the **Emergency Relief Program**, FHWA staff often provides “**quick release**” **funding** which helps restore critical transportation infrastructure immediately after an event. These “quick release” funds are a down payment toward restoring damaged transportation infrastructure. Recently, FHWA has distributed approximately \$110 million in Emergency Relief quick release funding to: offset costs of repair work needed as the result of hurricanes Fiona and Ian and typhoon Merbok; defray costs associated with roadwork in Death Valley National Park and Idaho due to flood damage; and repair roads and bridges in California after multiple storms and flooding events.

Focusing on Safety

FHWA believes that zero is the only acceptable number of deaths on our roads and that a Safe System Approach is how we get there. FHWA staff will play an important role in implementing the Department of Transportation’s National Roadway Safety Strategy, which has formally adopted zero deaths as the DOT-wide vision and emphasizes the Safe System Approach.

Restoring Economic Strength

The IIJA provides a historic investment in our Nation’s roads and bridges. For example, the IIJA includes the single largest dedicated bridge investment since the construction of the Interstate System. FHWA staff will play an integral role in ensuring that new programs, such as the Bridge Formula Program and the Bridge Investment Program, are successfully implemented.

- In May 2022, FHWA announced updates to the National Bridge Inspection Standards. The changes announced will help **improve bridge safety by ensuring the uniformity of inspections and evaluations**, clarifying responsibilities, and requiring action for higher-risk issues. They also update the training and qualification requirements for bridge inspectors, establishing a national certification for inspectors, and expanding the regulatory requirements to tribally owned highway bridges.
- FHWA works closely with States, local governments, Federal agencies, and Tribes to help **provide successful and streamlined project delivery**. For example, FHWA staff have worked closely with the Florida Department of Transportation on the Howard Franklin Bridge project to rebuild the existing northbound bridge. The new bridge will provide the following benefits to the community: improve incident management in emergency response situations; improve hurricane evacuation plans; provide improved operations of bus services; improve pedestrian and bicycle safety and access through a bicycle/pedestrian trail; and reduce congestion.

Ensuring Transportation Equity

FHWA will work towards creating a more equitable transportation system that provides affordable access to transportation for all communities and redresses prior inequities and barriers to opportunity created by the transportation system. FHWA staff will implement programs, newly authorized by the IJA, that will provide dedicated funding to improve transportation equity.

With funds made available by the BIL, FHWA's Federal, State, Tribal, and local partners will be delivering more projects this year and in years to come. FHWA staff will work with these stakeholders to ensure that these investments create opportunities for advancing equity.

FHWA staff will work to expand and diversify the workforce that builds federally funded highway projects. FHWA is encouraging recipients to consider implementing Local Hire programs, which can be used to ensure that the jobs created by investing in roads and bridges go to a diverse group of local residents.

- Furthermore, FHWA staff champions **innovative approaches to expanding workforce opportunities**. For example, FHWA staff, working with the American Association of State Highway and Transportation Officials, the Associated General Contractors of America, the American Road & Transportation Builders Association, and the U.S. Department of Labor's Employment and Training Administration, created a highway construction workforce development playbook called "Identify, Train, Place." The playbook is aimed at helping State and local agencies identify, train, and place workers in the transportation construction workforce to meet resource needs to deliver highway construction jobs.
- In addition to the playbook, FHWA developed a **comprehensive outreach campaign called Roads to Your Future**. The campaign includes free messaging and marketing materials to help recruit the next generation of highway construction workers. Many of the materials can be customized with local information to market open jobs and training to potential applicants.

Addressing Climate Change

FHWA staff directly supports the Administration's goal of installing 500,000 new electric vehicle (EV) chargers by 2030. FHWA's programs support States, Tribes, Territories, MPOs, and FLMAs in building out EV chargers. These EV chargers will support inter-city, regional, and national travel, build consumer confidence by addressing driver range anxiety, and accelerate awareness of and public interest in the use of EVs. In addition, FHWA's research programs and staff are dedicated to combating climate change by reducing transportation-related emissions.

Investing in Transforming Transportation

FHWA staff conducts research, advances technologies and practices, such as the use of connected vehicle (CV) technologies, delivers training, and provides technical assistance to

States, local, and Tribal governments. These new technologies and practices save lives, time, and money.

FHWA staff implements the **Research, Technology, and Education Program** which strives to generate new solutions, build more effective partnerships, and provide better information and tools for decision-making, which will enable our Nation to enhance and make the best investments in the transportation system. Through this program, FHWA staff execute the entire innovation life cycle, from research and development, to testing and evaluation, and to deployment and training.

The requested level of funding would allow FHWA to continue to provide these valuable services, thus enhancing the transportation experience for all Americans.

1/ Details for this program are contained in the Office of the Assistant Secretary for Research and Technology FY 2024 budget.

2/ Title 23 U.S.C. 505(b) requires State DOT's to expend no less than 25 percent of their annual SP&R funds on RT&E activities. Total SP&R funding represents 2 percent of apportioned programs, exclusive of the Metropolitan Planning Program, Carbon Reduction Program, and Promoting Resilient Operations for Transformative, Efficient, and Cost-Saving Transportation (PROTECT) Program.

3/ Advanced Transportation Technologies & Innovative Mobility Deployment is funded by set-asides from Highway Research and Development, Technology and Innovation Deployment Program, and Intelligent Transportation Systems.

4/ Subtotals may not add due to rounding.

5/ The FY 2022 and FY 2023 amounts reflect the 8.7 percent and 12.2 percent "lop-off" resulting from the imposition of the obligation limitation, respectively. The FY 2024 Request reflects authorized amounts per program before the "lop-off" percentage has been applied.

Total Programs ^{2/}	\$519,000	\$81,625	\$75,375	\$39,250	\$39,250	\$117,750	\$39,250

^{1/} Details for this program are contained in the Office of the Assistant Secretary for Research and Technology FY 2024 Budget.

^{2/} The amounts in this table reflect an illustrative distribution among the Strategic Goals. In most cases, activities funded through these programs will overlap with more than one of the Strategic Goals, as they are not mutually exclusive.

**FEDERAL HIGHWAY ADMINISTRATION
RESEARCH, TECHNOLOGY, AND EDUCATION (RT&E)**

RT&E PROGRAM NAME: HIGHWAY RESEARCH & DEVELOPMENT PROGRAM

Objectives: To research and develop transformational technologies that support and improve safety; improve the mobility of people and goods; stimulate growth, productivity, and competitiveness; reduce congestion; improve the durability and extend the life of transportation infrastructure; foster innovation in transportation and transportation technologies; accelerate project delivery; and support the transition to the transportation system of the future through innovative practices and technologies that provide an equitable approach to serving all road users, including those in social and demographic communities that are underserved in access to mobility options and disproportionately represented in preventable and fatal injury crashes.

Fiscal Year 2022: \$134.2 million

In FY 2022, FHWA built on prior research and continues to work toward solutions that address the Nation’s most critical infrastructure-related needs. The FHWA R&T Program for FY 2022 included both follow-on initiatives from prior work and new activities that address emerging needs. Specific activities included research on automated driving systems, multimodal mobility, and advanced infrastructure materials and infrastructure resilience. FY 2022 funding level reflects the 8.7 percent "top-off" resulting from the imposition of the obligation limitation.

In FY 2022, FHWA initiated the development of a “Shared Micromobility and Equity” primer. The primer provides practitioners an overview of the relationship between shared micromobility and transportation equity, a discussion of 10 policies that jurisdictions may use to incorporate equity into shared micromobility programs, several case studies, and featured resources.

Also, in FY 2022, the IIJA added two set-aside programs for the Highway Research and Development Program:

- *Strategic Innovation for Revenue Collection:* This program modifies and renames the Surface Transportation System Funding Alternatives program. The purpose of this program is to test the feasibility of a road usage fee and other user-based alternative revenue mechanisms to help maintain the long-term solvency of the Highway Trust Fund, through pilot projects at the State, local, and regional levels. The IIJA expanded eligibility for this program to include metropolitan planning organizations and local governments, in addition to States.
- *National Motor Vehicle Per-Mile User Fee Pilot:* This pilot program will demonstrate a national motor vehicle per-mile user fee; and establish a Federal System Funding Alternative Advisory Board. The Department may carry out a public awareness campaign to increase public awareness regarding a national motor vehicle per-mile user fee. This program will test the design, acceptance, implementation, and financial sustainability of a national motor vehicle per mile user fee designed to restore and maintain the long-term solvency of the Highway Trust Fund.

Fiscal Year 2023: \$147.0 million

In FY 2023, FHWA will continue to foster innovation in tools, research, and models to improve the safety of the Nation's infrastructure; improve mobility and accessibility; stimulate economic growth, productivity, and competitiveness; lead in the development and deployment of innovative practices and technologies; and serve the Nation with greater equity, efficiency, effectiveness and accountability. For example, FHWA will pursue roadway design, construction, and maintenance, and robust data analysis tools to reduce the number of fatalities and serious injuries on the Nation's roads, including for social and demographic communities that suffer disproportionately from preventable death and fatal injury from crashes; conduct forward-looking, transformative research that ensures a durable, resilient, and environmentally-friendly infrastructure; and invest in research that creates system-wide operational improvements, plans for the integration of transformative technologies, and reduces the impact on the environment.

FHWA is working with State and local transportation agencies and Tribal Governments across the United States to implement a Complete Streets design model that prioritizes safety, comfort, and connectivity to destinations for everyone who uses the street network. A Complete Street is safe, and feels safe, for everyone using the street. In FY 2023, the Complete Streets initiative will finalize the development of a safety analysis approach and begin testing the approach with case studies developed by other parties. Work will also proceed on developing methods for reducing data collection costs on pedestrians, bicyclists, and other vulnerable road users (VRUs). The primary societal benefit of a Complete Street design model will be in the reduction of fatalities and serious injuries, which disproportionately affect minority, underserved, and rural communities.

Fiscal Year 2024: \$147.0 million

In FY 2024, FHWA will conduct research to enhance safety through developing tools to enhance the safety of vulnerable road users; promote equity by developing planning tools to provide for greater access to transportation by all user groups; lead research to prepare roadway infrastructure for, and to advance, transportation systems management and operations (TSMO) strategies with emerging capabilities in automation and cooperation; pilot user-based alternative revenue mechanisms at the national and state levels; develop materials to enhance the strength and durability of the highway infrastructure; and enhance the ability to use non-traditional data sources to solve highway transportation issues.

Next-Generation Design Tools for Bridge Scour, Stream Stability, and Scour

Protection/Countermeasures: Effectively addressing infrastructure vulnerability to the forces of flowing water is critical to improving infrastructure resiliency. Hydraulic and geotechnical engineers at FHWA's are developing improved design tools to support monitoring of scour around bridge foundations and erosion at roadside stream banks, facilitating the design of effective protective measures. The products of this research will enable more resilient highway infrastructure.

RT&E PROGRAM NAME: TECHNOLOGY AND INNOVATION DEPLOYMENT PROGRAM

Objectives: Accelerate the adoption of proven innovative practices and technologies as standard practices to significantly improve: safety, system efficiency, infrastructure health, reliability and

performance, and a balanced approach to provide livable/sustainable communities across the Nation.

Fiscal Year 2022: \$100.4 million

In FY 2022, this program continued to support the deployment of innovative and proven transportation technologies and processes through financial and technical assistance, training, peer exchanges, collaboration with industry groups, information, and knowledge exchange. FY 2022 funding level reflects the 8.7 percent "lop-off" resulting from the imposition of the obligation limitation.

Through Pavement and Materials research and Accelerated Implementation and Deployment of Pavement Technologies, FHWA advances sustainable pavement designs, materials, and practices. Technology transfer and training efforts focus on providing information and technical assistance to advance the use of Environmental Product Declarations (EPDs) within a Life Cycle Assessment (LCA) framework to analyze and quantify environmental impacts, enabling data driven decisions concerning material selection.

Fiscal Year 2023: \$110.0 million

In FY 2023, FHWA will continue to support a series of critical technology deployment programs that provide direct benefits to State and local transportation departments. Accelerating the Implementation and Delivery of New Innovations and Technologies encompasses a variety of both long-standing initiatives and activities that seek to address all aspects of highway transportation, including planning, financing, operation, structures, materials, pavements, environment, construction, and the duration of time between project planning and project delivery. Within this program, FHWA supports numerous efforts to accelerate the implementation and delivery of new innovations and technologies that result from highway R&D and that benefit all aspects of highway transportation.

In FY 2023, FHWA will be establishing the Center of Excellence on New Mobility and Automated Vehicles. This Center of Excellence will collect, conduct, and fund research and technology transfer on the impacts of new mobility and automated vehicles on land use, urban design, transportation, real estate, equity, and municipal budgets.

Fiscal Year 2024: \$110.0 million

In FY 2024, FHWA will continue to support a series of critical technology deployment programs that provide direct benefits to State and local transportation departments. These programs include:

- *Every Day Counts program*: Stakeholder-driven program which identifies underutilized market-ready technologies with high pay-offs and accelerates their deployment and widespread adoption throughout the Nation. This program has successfully highlighted several safety-based initiatives (e.g., Safe Transportation for Every Pedestrian, Focus on Rural Roadway Departures) and others which address improvement of core assets (e.g., Targeted Overlay Pavement Solutions) and economic strength (Strategic Workforce Development). The anticipated seventh round of the program (2023-2024) provides an avenue to promote and advance Departmental priorities.

- *Accelerated Innovation Deployment Demonstration program*: Provides funding for eligible entities to accelerate the implementation and adoption of innovative technologies or practices on highway transportation projects. Through the Notice of Funding Opportunity for this grant program, FHWA has the ability to encourage applications for projects which address the Departmental priorities and include these priorities as evaluation factors for consideration of award.
- *State Transportation Innovation Council (STIC) Incentive program*: Each State DOT co-chairs a STIC that works collaboratively across public and private sectors to identify, evaluate, and actively promote the implementation and adoption of innovative technologies and practices in all communities across the Nation.
- *Accelerated Market Readiness program (AMR)*: Supports promising new innovations that have the potential to be considered for accelerated deployment. This program is seeking innovations of a transformational nature that, when in a more market ready status, can be adopted by transportation agencies. When issuing a solicitation for proposals, FHWA has the ability to encourage applications for projects which address the Departmental priorities and include these priorities as evaluation factors for consideration of award.
- *Innovation Implementation Deployment Management*: Provides tools, training, technology deployment, and technical assistance that support the transportation community's use of cutting-edge innovations and technologies to deliver critical infrastructure projects. FHWA's efforts in this area primarily consist of FHWA subject matter expert-led deployment activities including webinars, technical assistance, and just-in-time training.
- *Accelerated Implementation and Deployment of Pavement Technologies (AID-PT)*: Within the Technology and Innovation Deployment Program, \$12 million is designated to promote, demonstrate, support, and document the application of innovative pavement technologies, practices, performance, and benefits.
- *Advanced Transportation Technologies and Innovative Mobility Deployment*: Provides grants to deploy, install, and operate advanced transportation technologies to improve safety, mobility, efficiency, system performance, intermodal connectivity, and infrastructure return on investment. The IJA funds this program at \$60 million per year for each of fiscal years 2022 through 2026.
- *Advanced Digital Construction Management Systems (ADCMS)*: The IJA established a program for ADCMS, funded at \$20 million per year for each of fiscal years 2022 through 2026, to promote, implement, deploy, demonstrate, showcase, support, and document the application of ADCMS, practices, performance, and benefits.

RT&E PROGRAM NAME: TRAINING AND EDUCATION (T&E)

Objectives: To foster a safe, efficient, and sustainable surface transportation system by improving the skills and increasing the knowledge of the transportation workforce and decision-makers through training and information exchanges. To attract qualified students to the field of transportation and advance transportation workforce development.

Fiscal Year 2022: \$22.8 million

In FY 2022 this program continued to provide leadership, training, educational materials and resources for the development and delivery of training, professional development and education programs to improve the quality of our highway system and its intermodal connections. It also continued to provide educational opportunities to the surface transportation community by developing core competencies and new skills, enabling technology transfer, and sharing best practices. FY 2022 funding level reflects the 8.7 percent "lop-off" resulting from the imposition of the obligation limitation.

Fiscal Year 2023: \$25.3 million

In FY 2023, FHWA will continue to support the delivery of training and other educational resources to the surface transportation community. Innovations that are produced through FHWA R&T activities, as well as those produced through other means, will be incorporated into training and education materials to support technology transfer and deployment. The T&E program will engage in workforce development and professional capacity building to provide innovative tools, processes, and concepts to State, local, Tribal, and Federal Land Management Agencies. FHWA will continue to support scholarships, fellowships, and workforce development centers to support the next generation of the surface transportation workforce.

Fiscal Year 2024: \$25.5 million

In FY 2024, FHWA will continue to support the delivery of training and other educational resources to the surface transportation community. Innovations that are produced through FHWA R&T activities, as well as those produced through other means, will be incorporated into training and education materials to support technology transfer and deployment. The T&E program will engage in workforce development and professional capacity building to provide innovative tools, processes, and concepts to State, local, Tribal, and Federal Land Management Agencies. FHWA will continue to support scholarships, fellowships, and workforce development centers to support the next generation of the surface transportation workforce.

RT&E PROGRAM NAME: INTELLIGENT TRANSPORTATION SYSTEMS PROGRAM (ITS)

Objectives: The Intelligent Transportation Systems (ITS) Program seeks to support safer vehicles and roadways by fostering innovation in better crash avoidance and protection measures; enhancing mobility by exploring methods and management strategies that increase system efficiency and improve individual mobility; improving accessibility by better managing traffic flow, speeds, and congestion; promoting innovation by fostering technological advancement and innovation across the DOT's ITS Program; and supporting transportation system information sharing through the development of standards and systems architecture.

Fiscal Year 2022: \$100.4 million

In FY 2022, the ITS Program conducted automation research in conjunction with other DOT modes, as well as State and local public agencies, academia, industry, and other surface transportation stakeholders. In addition, the Complete Trip – ITS4US Deployment Program progressed to Phase 2 upon the successful completion of Phase 1 concept development. Other key research and coordination areas included: cultivating the next generation of emerging/enabling Technologies, cybersecurity for ITS; accelerating deployment and adoption of ITS; and supporting data access and exchanges. These efforts continued to: increase multimodal mobility options for all travelers regardless of location, income, or disability; transform safety, mobility, energy, and environmental efficiency; increase productivity; facilitate freight movement within our Nation’s transportation system; and facilitate the adoption and implementation of information and communications technology. FY 2022 funding level reflects the 8.7 percent "lop-off" resulting from the imposition of the obligation limitation.

Fiscal Year 2023: \$110.0 million

In FY 2023, the ITS Program will continue to engage in system-wide interoperability allowing transportation systems users to access ITS services anywhere they may travel. Interoperability is essential to maximize safety and mobility benefits from rapidly advancing ITS technologies. The ITS Program will conduct research in coordination with other DOT modes, as well as State and local public agencies, academia, industry, and other surface transportation stakeholders to advance automation, cybersecurity, mobility, environmental impacts, as well as other critical research areas to enable efficient, safe and secure ITS deployments.

Fiscal Year 2024: \$110.0 million

In FY 2024, the ITS Program will continue to support the DOT’s mission of using a balanced approach that ensures that the entire Nation has the safest, most efficient and modern transportation system in the world. The ITS Program continues to serve as an innovative hub for projects impacting all aspects of American transportation, from AV policy and institutional issues, to cybersecurity, artificial intelligence, data access and management, innovative deployments, and application testing. Through the development of cooperative and standards-based interoperable technologies and comprehensive, stakeholder-driven policies, the ITS Program facilitates the deployment of technology to enhance the efficiency, safety, and convenience of surface transportation resulting in improved access, saved lives and time, and increased productivity.

RT&E PROGRAM NAME: STATE PLANNING & RESEARCH (SPR)

Objectives: To solve transportation problems identified by the States. To encourage cooperation among States to leverage funds and conduct research of relevance to multi-State regions. This program is funded by a set-aside from each State’s apportionments from five programs: the National Highway Performance Program, the Surface Transportation Block Grant Program; the Highway Safety Improvement Program, the Congestion Mitigation and Air Quality Improvement Program, and the National Highway Freight Program.

Fiscal Year 2022: \$245.8 million

In FY 2022, the SPR program continued to: meet local needs through applied research on State or regional problems; foster innovation through transfer of technologies from researchers to users; and conduct research for setting standards and specifications. States supported cooperative research programs such as the National Cooperative Highway Research Program and the Transportation Pooled Fund Program.

Fiscal Year 2023: \$250.8 million

In FY 2023, the SPR program will continue to support identification and development of innovations that address State and local concerns related to highway transportation and engage in cooperative research programs and activities. These efforts will result in the deployment of proven technologies and transportation-related innovations and processes, financial and technical assistance, training, peer exchanges, collaboration with industry groups, information, and knowledge exchange.

Fiscal Year 2024: \$255.8 million

In FY 2024, the SPR program will continue to advance applied research related to highway transportation and engage in cooperative research programs such as the National Cooperative Highway Research Program and the Transportation Pooled Fund Program. These efforts will result in the deployment of proven technologies, innovation, technology transfer and peer exchanges.

RT&E PROGRAM NAME: UNIVERSITY TRANSPORTATION CENTERS

Amount Requested for FY 2024: \$100.0 million

Project and activity summaries are provided in the Office of the Secretary of Transportation – Office of the Assistant Secretary for Research and Technology FY 2024 budget submission.

RT&E PROGRAM NAME: BUREAU OF TRANSPORTATION STATISTICS AMOUNT

Amount Requested for FY 2024: \$26.5 million

Project and activity summaries are provided in the Office of the Secretary of Transportation – Office of the Assistant Secretary for Research and Technology FY 2024 budget submission.

FY 2024 Budget

Federal Highway Administration Information Technology Budget Narrative

(Budget Authority in Thousands)

Budget Account	FY 2022	FY 2023	FY 2024 Request
Federal-Aid Highways			
<i>Commodity</i>	\$42,534	\$44,615	\$49,534
<i>IT SS WCF</i>			
<i>FHWA IT</i>	\$69,001	\$73,860	\$71,880
Total	\$111,535	\$118,475	\$121,414

The Federal Highway Administration (FHWA) is requesting **\$121 million** in FY 2024 for information technologies (IT) that support the full spectrum of FHWA programs, as well as the Department’s initiative to transform and consolidate the management of certain IT solutions centrally by the Office of the Chief Information Officer (OCIO).

Commodity IT Shared Services through the WCF

OCIO will continue to provide FHWA Commodity IT Shared Services in FY 2024 to achieve economies of scale and increase consistency of cybersecurity protections across the Department. Commodity IT Shared Services include IT functions and activities dedicated to basic support services, including network operations, end-user computing, telecommunications services, and server operations.

- **Commodity IT Shared Services** - FHWA requests **\$49.5 million** for Commodity IT Shared Services. FHWA’s share was based on actual commodity IT consumption in prior years, as well as planned future consumption. OCIO, in collaboration with FHWA, assumed a one-to-one cost estimate to transition all commodity IT to OCIO. FHWA will only be charged for services rendered.

FHWA IT

The following major mission-critical IT systems will be maintained by FHWA in FY 2024. This list is only a subset of all IT systems that support FHWA and are reported in the Office of Management and Budget’s (OMB) Corporate Investment Management System (CIMS).

Following passage of the BIL, FHWA instituted a workgroup that considers how best to use the additional administrative resources provided by the IIJA, including potential investments in IT. For example, FHWA’s mission-critical Fiscal Management Information System 5.0 (FMIS) may need enhancements to support expanded reporting, recipients, and other requirements under the IIJA. These investment decisions are made on a rolling basis, and may occur in FY 2023 and FY

2024, however, the specific investments and amounts are to be determined and not included below.

- **FMIS** – FHWA requests **\$3.5 million** for the agency’s most mission-critical system, through which States receive reimbursements for Federal-aid program costs, authorize and modify projects, as well as track and report on critical financial and program information. FHWA staff use FMIS to apportion Federal-aid highway funding, set obligation limitations, transfer funds, approve projects, manage, and oversee financial management of the Federal-aid program, and report on FHWA funding. The requested funding is to support operations and maintenance, critical system enhancements necessary to meet Congressionally mandated requirements (e.g., DATA Act, audit requirements for Federal awards under 2 CFR 200, etc.), and new enhancements based on requirements from State and Federal users.
- **Highway and Bridge Data Collection** – FHWA requests **\$6.5 million** to manage several IT investments used to compile, manage, and make available vital highway and bridge data, some of which is statutorily required. These investments include:
 - The **Highway Performance Monitoring System (HPMS)** supports a data-driven decision-making process among FHWA, the Department, and Congress. HPMS data are used extensively in the analysis of highway system condition, performance, and investment needs that make up the biennial *Condition and Performance (C&P) Report* to Congress. The C&P Report serves to inform both authorization and appropriation legislation activities that ultimately determine the scope and size of the Federal-aid highway program and the level of Federal highway taxation.
 - The **National Bridge Inventory (NBI)** is a collection of bridge inventory and condition information collected under the auspices of the National Bridge Inspection Standards (NBIS) as prescribed by law. The information is used for performance measure reporting, National Highway System (NHS) penalty determination, and reporting to Congress.
 - The **Integrated Transportation Information Platform (ITIP)** provides a comprehensive source for infrastructure condition and performance and Federal-aid project data elements. The ITIP integrates and provides seamless access to a wide range of data elements, which are maintained within FMIS, HPMS, and the NBI. Through ITIP, users are provided with data analysis, visualization, and reporting capabilities.
- **Direct Program Support for the Office of Federal Lands and the Office of Research, Development, and Technology** – FHWA requests **\$24.1 million** to provide the necessary tools to effectively manage FHWA’s initiatives for Federal Lands, Tribes, and transportation research, including investments in innovative technologies that improve highway safety and infrastructure.

- For example, FHWA's **Turner-Fairbank Highway Research Center (TFHRC)** is a member of Internet2, which is a research and development consortium led by over 200 universities working in partnership with industry and government to develop and deploy advanced network applications and technologies. Internet2 operates the Nation's largest and fastest, coast-to-coast research and education network that was built to deliver advanced, customized services that are accessed and secured by the community-developed trust and identity framework. TFHRC utilizes this high-speed, highly secure network to run applications on super computers at national labs, obtain access to massive data servers at research universities, and to send large amounts of data to test facilities that provide critical operational testing environments and which are operated by other Federal agencies. Access to this network is critical to support FHWA's world-class research and to enable efficient data sharing and processing.
- **Interagency Agreements** – FHWA requests **\$20.8 million** for funding Interagency Agreements (IAAs). FHWA partners with the Enterprise Service Center (ESC) for support services provided for accounting, contracting, and time and attendance systems. Other IAAs support roadway safety, geo-economic system modeling, rural and statewide geographic information systems, motor vehicle registration, highway needs and investment analysis, and environmental reviews.
- **Additional IT maintenance and support contributions staying within the mode:** FHWA requests **\$16.9 million** to support IT systems that are critical to the successful delivery of the Federal-aid highway program. FHWA invests expertise and resources into various oversight and governance programs to reduce risk , positively impact program performance and effectiveness, align with strategic goals, and continuously enhance the IT environment to enable robust and flexible IT solutions. Examples of several programs are Data Management, IT Business Cases and Alternative Analysis, Enterprise Architecture (EA), and the Capital Planning and Investment Control (CPIC) program.

Highway Infrastructure Programs (GF Supplemental Appropriation)									\$9,454,400 ^{14/}	\$9,454,400 ^{14/}
Highway Infrastructure Programs (GF)					\$2,525,000	\$3,250,000	\$2,166,140	\$12,000,000 ^{16/}	\$2,444,928 ^{17/}	\$3,417,812 ^{17/}
Neighborhood Access and Environmental Review (GF)									\$5,305,000 ^{18/}	

1/ Does not reflect sequestration of 7.2 percent of contract authority exempt from obligation limitation and \$10.4 billion portion of the payment to the Highway Trust Fund per Sequestration Order dated April 10, 2013.

2/ Does not reflect sequestration of 7.3 percent of contract authority exempt from obligation limitation per Sequestration Order dated March 10, 2014.

3/ Does not reflect sequestration of 6.8 percent of contract authority exempt from obligation limitation per Sequestration Order dated February 2, 2015.

4/ Does not reflect sequestration of 6.9 percent of contract authority exempt from obligation limitation per Sequestration Order dated February 9, 2016.

5/ Does not reflect sequestration of 6.6 percent of contract authority exempt from obligation limitation per Sequestration Order dated May 23, 2017.

6/ Does not reflect sequestration of 6.2 percent of contract authority exempt from obligation limitation per Sequestration Order dated February 12, 2018.

7/ Does not reflect sequestration of 5.9 percent of contract authority exempt from obligation limitation per Sequestration Order dated March 18, 2019.

8/ Does not reflect sequestration of 5.7 percent of contract authority exempt from obligation limitation per Sequestration Order dated February 10, 2020.

9/ Does not reflect sequestration of 5.7 percent of contract authority exempt from obligation limitation per Sequestration Order dated May 28, 2021.

10/ Does not reflect sequestration of 5.7 percent of contract authority exempt from obligation limitation per Sequestration Order dated March 28, 2022.

11/ All fiscal years include FHWA General Operating Expenses and transfers to the Appalachian Regional Commission for administrative activities associated with the Appalachian development highway system. All fiscal years do not include amounts for other non-administrative programs authorized under Administrative Expenses.

12/ FY 2015 annual appropriations (PL 113-235) provided an obligation limitation of \$429.3 million for GOE and ARC. The Surface Transportation and Veterans Health Care Choice Improvement Act of 2015 (PL 114-41) provided contract authority of only \$415 million.

13/ For 2021, FHWA used carryover administrative expenses contract authority to utilize the Limitation on Administrative Expenses provided in the Appropriations Act.

14/ The IJA provides funding for administrative expenses as a takedown from the Highway Infrastructure Programs. The aggregate of these takedowns is \$86.8 million in both FY 2022 and FY 2023.

15/ The Disaster Relief Supplemental Appropriations Act, 2022 (Public Law 117-43) provided \$2.6 billion in additional emergency relief funding from the General Fund for FY 2022. The Consolidated Appropriations Act, 2023 (Public Law 117-328) provided \$803 million in additional emergency relief funding from the General Fund for FY 2023.

16/ The Department of Transportation Appropriations Act, 2021 (Public Law 116-260) provided \$2 billion in additional highway funding from the General Fund for FY 2021. The Coronavirus Response and Relief Supplemental Appropriations Act, 2021 (Public Law 116-260) provided \$10 billion in additional highway funding from the General Fund for FY 2021.

17/ The Department of Transportation Appropriations Act, 2022 (Public Law 117-103) provided \$2.4 billion in additional highway funding from the General Fund in FY 2022. The Department of Transportation Appropriations Act, 2023 (Public Law 117-328) provided \$3.4 billion in additional highway funding from the General Fund in FY 2023.

18/ The Inflation Reduction Act of 2022 (Public Law 117-169) provided \$5.3 billion in additional highway funding from the General Fund in FY 2022.
