

Colorado

Concrete Box Culvert and Corrugated Metal Pipe Culvert Program

CHBP FY 2018 Grant Award: \$12,475,000

Recipient: Colorado Department of Transportation

Project Description

The project will replace 14 culverts across southern and western Colorado, along key corridors providing rural mobility and connections to interstate commerce. State Highway 9 provides access for tourists to recreation destinations in the Rocky Mountains, US-24 provides access across the Rocky Mountains as a major east/west corridor and US 350 provides a connection between I-25 and US-50.

Project Benefits

The project improves up to 14 bridges in poor condition on key routes, ensuring the bridges will not require load restrictions that can negatively impact commerce.
