Technical Assistance: Review of PANYNJ Environmental Impact Assessment Tools

Project Goals:

To advance the Port Authority's clean construction and life cycle analysis work through the Technical Assistance Request Tasks (TARTs) identified. The conclusion of these TARTs is to enable the Port Authority's teams to better quantify CO₂ from both the design and construction stages and to present suggestions for advancing the agency's work in the environmental assessment arena.

Project Scope:

➤ Technical Assistance:

1. Systematic review of life cycle tools being developed by the PANYNJ, refinement of construction stage LCAs, documentation of approach, and validation.
2. Addressing Challenges: data gaps, system boundaries, and consistency with ISO standards.
3. Present suggestions for advancing the agency's work in the environmental assessment arena.
