## Resilient Resurfacing – A Permeable Pavement Pilot

### Project Goals:

Develop a cost and performance analysis of the resurfacing of North Road in Jamestown with pervious pavement to assess the environmental impacts and performance of the pervious pavement surfacing.

### Project Tasks:

- Evaluate the costs, benefits, and impacts of the project
- Assess the applicability of the treatment for use elsewhere in the state where such a system might prove beneficial
- Develop a robust framework for community engagement for climate adaptation measures
