# EDC-5, Operations & Crowdsourcing

## *An Overview*

# What is “*Every Day Counts*”(EDC)?

State-based model to identify and rapidly deploy proven but underutilized innovations to:

- ✓ shorten the project delivery process
  - ✓ enhance roadway safety
  - ✓ reduce congestion
  - ✓ improve environmental sustainability
- 
- EDC Rounds: two year cycles
  - Initiating 5<sup>th</sup> Round (2019-2020) - 10 innovations
  - To date: 4 Rounds, over 40 innovations

**For more information:** <https://www.fhwa.dot.gov/innovation/>

*FAST Act, Sec.1444*

# Transportation Systems Management and Operations (TSMO)

- Optimizing use of existing facilities.
- Maximizing performance of the system.
- Buying the most mobility for the least cost.
- Treating capacity as an asset to manage.
- Getting you there – people and goods.
- Targeted solutions to congestion causes.
- Complement to capacity projects.
- Approaches to match demand to supply.

**Effective operations is built on a foundation of monitoring current conditions.**

# Real-Time Monitoring: A Weakness in the Foundation of Operations

There are 4 primary limitations in our typical approach to real-time monitoring:

1. Big gaps in geographic coverage.
2. Lags in timeliness of information.
3. Cost to build-out and maintain field equipment.
4. Jurisdictional stovepipes.

Source: FHWA

These limitations reduce the ability to efficiently and (cost) effectively operate the system.

# What's New for Operations?

Cheaper, accessible, monitoring, processing, and use of real-time data.

**BIG DATA**

# Crowdsourcing: A Potential Solution

## When integrated with an agency's existing efforts, crowdsourcing helps agencies:

- Expand geographic coverage and resolution.
- Reduce information time lags for improved real-time situational awareness.
- Reduce dependence on and cost associated with roadside sensors and systems.
- Overcome jurisdictional stovepipes.
- Implement proactive operations strategies.

**Crowdsourcing is a proven lower-cost solution to improving safety and operations.**

# What Exactly is Crowdsourcing?

Crowdsourcing is the practice of addressing a need or problem by enlisting the services of a large number of people via technologies. Crowdsourcing:

- ✓ Addresses a need or problem outside of an organization's resources or means by distributing the workload across a large group of people.
- ✓ Leverages the collective wisdom and unique insights of a crowd.
- ✓ Uses technology and new forms of communication and interaction to document, share, and reflect on the world.

*Source: Idea SV, El Salvador Milonario*

**How often is the “ask the audience” life line correct in the game show “Who Wants to be a Millionaire”?**

**A:    95% of the time**

**B:    50% of the time**

**C:    30% of the time**

**D:    75% of the time**

# Crowdsourcing Examples

Source: K W Reinsch

## 1906: UK Weight Judging Competition

- British scientist held competition @ Fat Stock & Poultry Exhibition.
- 787 took part in steer weight-guessing contest.
- Average 2 lbs. off; best guess 10 lbs. off.

Source: Pixabay

## 1995: Amazon Reviews

- Customers offer reviews & comment/vote on others' reviews.
- Rating, based on machine learning, and affect product visibility.
- Reports of review tampering surfaced in 2004.

# Crowdsourcing Examples

Source: Bruce Blaus

## 2000: Folding@home, Stanford University

- Volunteers allow use of their computers' idle processing power to simulate protein folding and drug design.
- 2M sign-ups = 5<sup>th</sup> most powerful computer in the world.
- Enables research into Alzheimer's, Cancer, & more.

## 2008: Lego Ideas

- Users post their ideas for potential Lego products.
- If an idea generates 10,000 views within a year, it qualifies for review by Lego.
- A user with a successful idea launch is entitled to 1% of the product's revenues.

**Question & Answer from Chat Box**

# Existing and Potential Crowdsourcing Applications in Transportation

Other possible applications include freight management, work zone management, and performance assessment and reporting.

# Sources of Crowdsourced Data

- Data extracted from social media platforms.
- Data acquired from third-party crowdsourced data.
- Data collected from specially-developed mobile apps.

Source: Pixabay

# Crowdsourcing – Opportunities for Advancing Operations

## **Crowdsourcing benefits Transportation Operations:**

- Expands & improves real-time monitoring
- Enables more targeted and timely response
- Enables strategic / programmatic operational improvements

## **Benefits beyond Transportation Systems...**

- Promotes legitimization & acceptance of public decisions.
- Improves transparency & efficiency of public expenditures.
- Promotes a sense of community & greater citizen satisfaction.

# Crowdsourcing Considerations

Source: Adapted from Unsplash

- Understanding your current operational gaps or needs.
- Understand nature of data - it may be different in focus, quality, processing, and management.
- Address policy, legal, or data ownership hurdles.
- Funding / procurement for non-traditional tools and services.
- Grow technical skills and architecture approaches.

# UDOT Citizen Reporter Program

Lisa Miller  
Traveler Information  
Manager

Are the roads slick?  
Let us know.

BECOME A UDOT CITIZEN REPORTER

Download the free UDOT Citizen Reporter app, available for for Android and iPhone.

**CITIZEN REPORTING**  
A UDOT Program

The advertisement features a smartphone displaying the UDOT Citizen Report app interface. The app screen shows fields for 'Where and When' (I-15 Farmington South through Salt Lake), 'Report Time' (Now), 'Conditions' (Road: Wet, Weather: Mixed Rain and Snow), and 'Comments' (Tap to write comments). A 'Submit' button is at the bottom. The background of the ad shows a snowy road stretching into the distance.

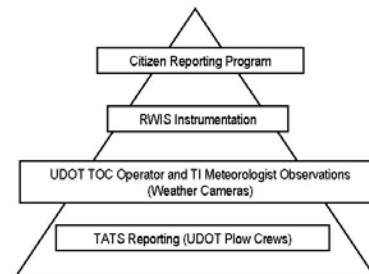

# History

- Launched winter 2012-2013
- Provided a consistent way for the public to report
- Short training program
- Special thanks to Wyoming DOT! (ECAR)

UDOT Weather Operations  
Program Data Input Sources

Verizon 3G 6:53 PM

Report Form

Where and When:

I-80 Echo Jct to Wyoming Stat... 

Report Time:

1/2/2017 6:52 PM

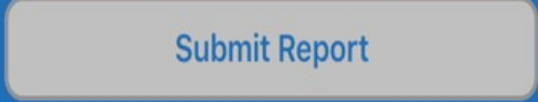

Conditions:

Slushy

Snow

Additional Information:

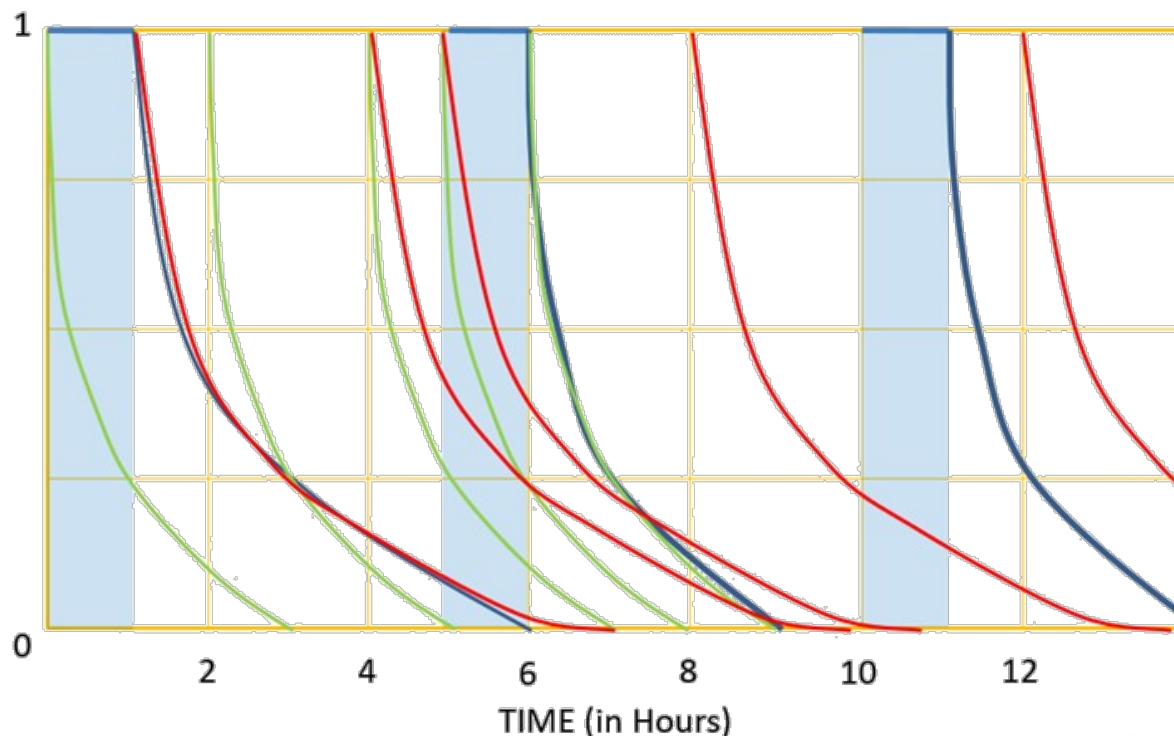

# Logic:

- **TI Mets** (Reports valid for 6 hours have an exponential decrease to 0% and report expires. TI Met reports are never more valuable than a TATS report if they are reported at the same time. )
- **TATS** (Reports valid for 1 hour then an exponential decrease to 6 hours when the report expires. TATS report have priority for 1 hour after reporting and are not overwritten by any other type of reporter)
- **Citizen Reporters** (Reports valid for 3 hours and have an exponential decrease to 0% and report expires. )

Color that appears “on top” is the report that is used for the RYG (not including priority TATS report for 1 hour)

# Managing Traffic with Probe Data

Edward D Cox, INDOT  
September 2018

# Crowdsourced Probe Data

- INDOT purchases real-time probe data
- Interstates partitioned into 2000+ segments
- Download speed data every 60 seconds
- “Traffic Ticker” developed by INDOT & Purdue University to process, visualize and use data

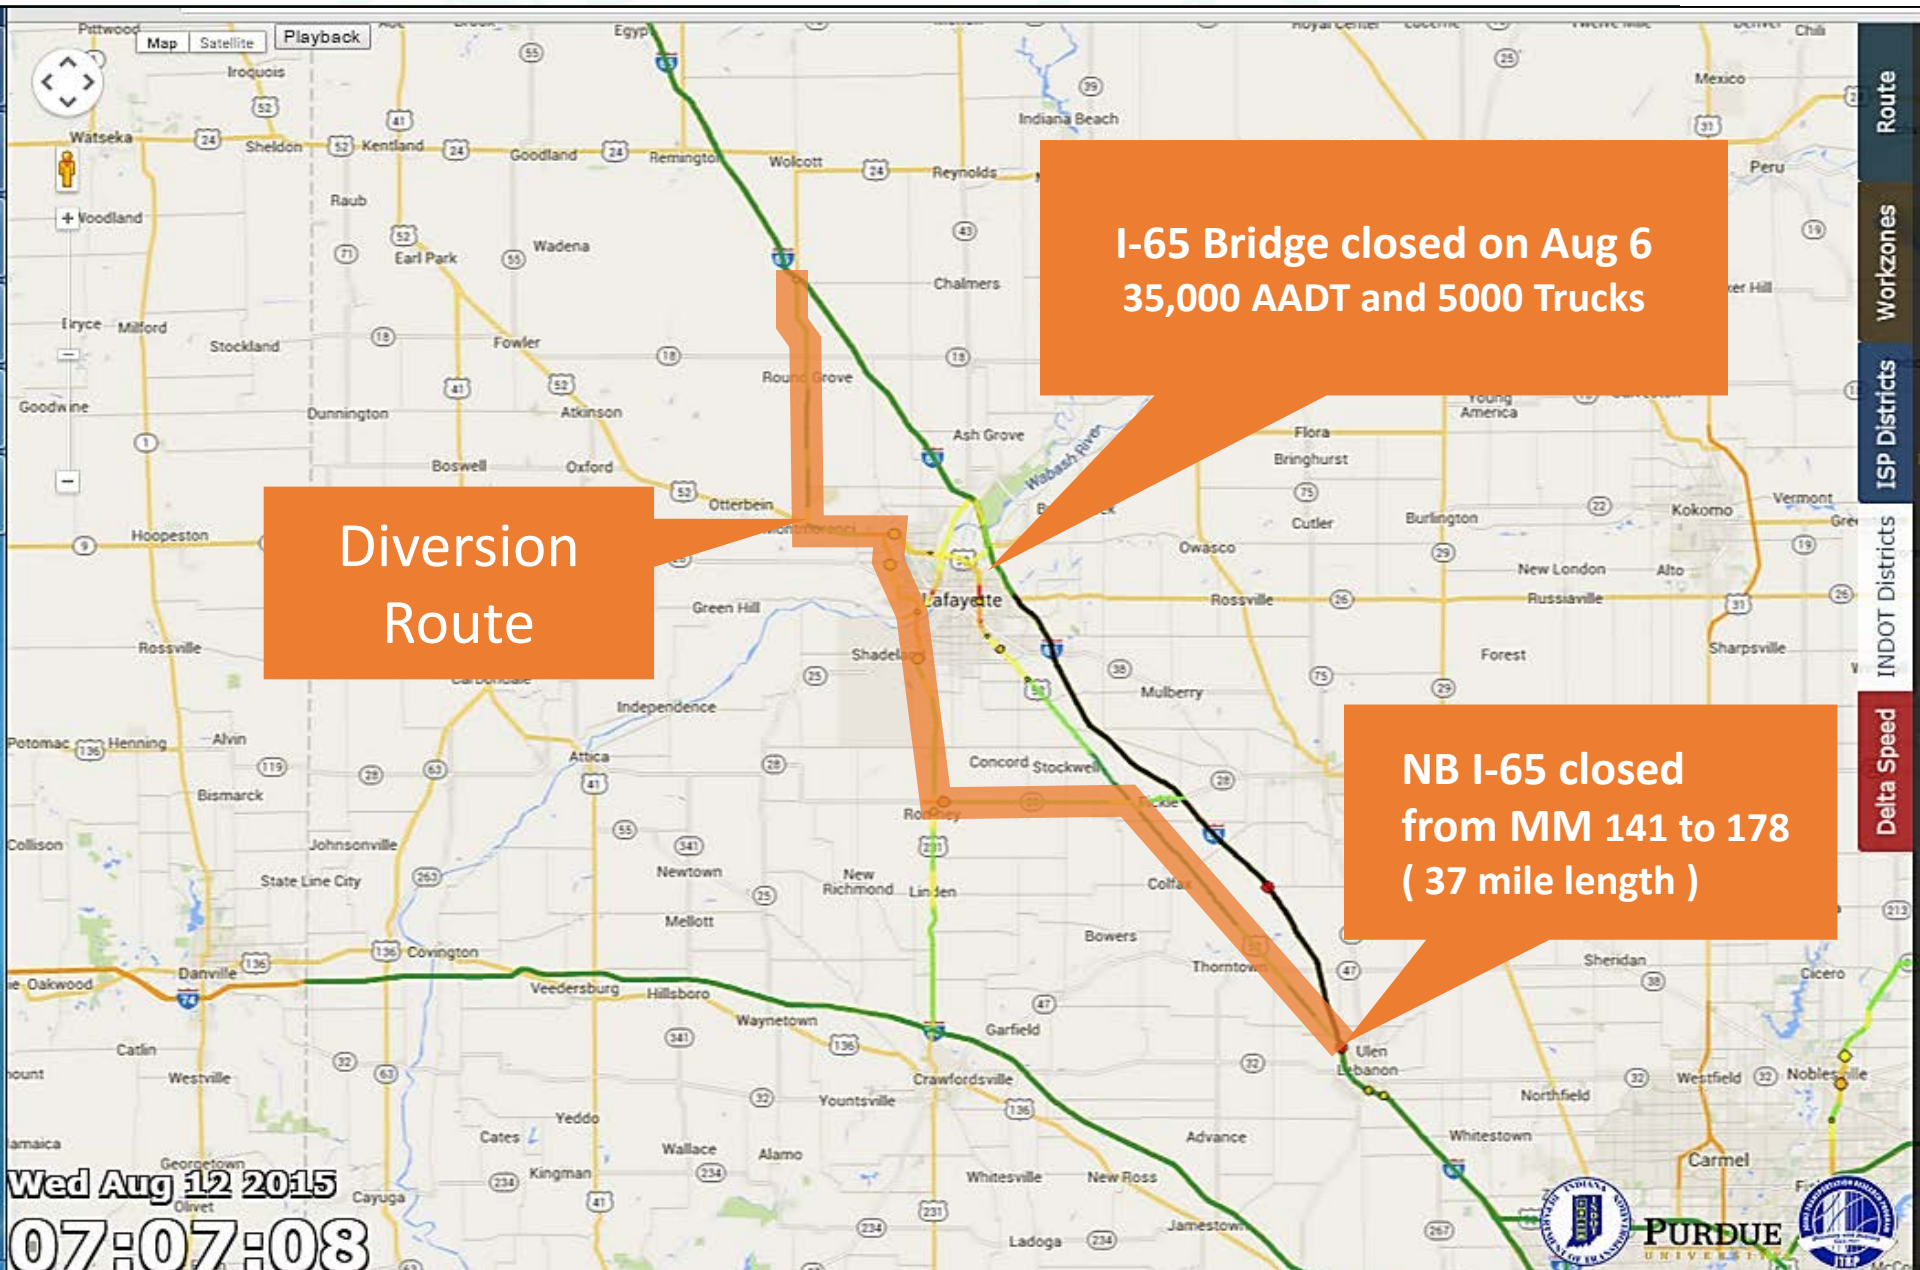

# The Problem: **Unplanned** I-65 NB Bridge Closure

# Interstate Diversion

10015 US-231

Brookston, Indiana

Street View - Jul 2009

I-65 Northbound

Diversion route -  
capacity constrained

# First Look – Perceptions of Detour

- On Day 1, a reporter drove the official detour route
- It took her 4 hours to drive 60 miles
- Press offered:

*“Moral of the story is that the INDOT detour route is essentially ineffective.”*

*So...*

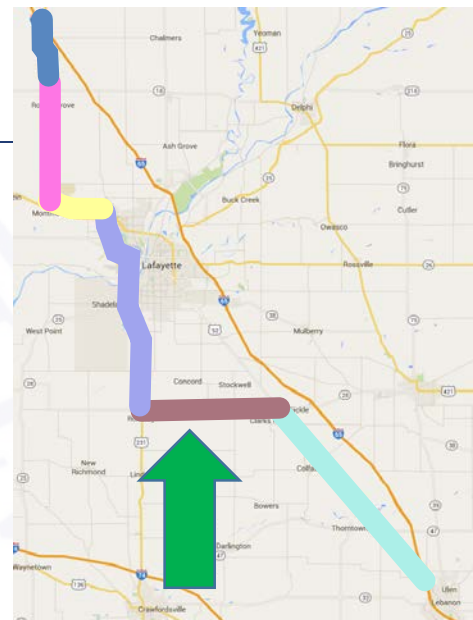

*How do we mine the data to change operations & improve customer experience?*

# Traffic Summary along Detour Route

## Stacked Segment Miles with Speed Below 45mph

## Miles Along Detour at Various Operating Speed

- We can effectively manage by segment and for the entire corridor -

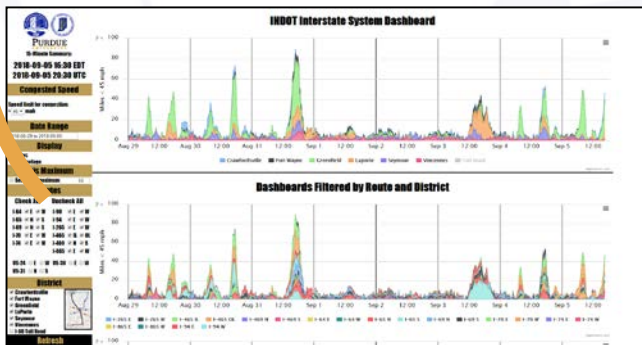

# Traffic Ticker Dashboard

We can see how each operations change affects system performance

# Live Traffic Ticker

Tool ingests real-time data to offer  
Visual profile by segment, direction, district and other factors
