1 As summarized from the Highway Performance Monitoring System (HPMS) universe data for the Principal Arterial and as expanded from the HPMS standard sample data for other systems. Pavement condition is stratified using the "Present Serviceability Rating" (PSR), a primarily subjective rating system, for the International Roughness Index (IRI), an objective rating system. PSR is a standard measure of pavement condition adopted from the "ROAD TEST" conducted in the late 1950s and early 1960s. Reference: Highway Research Board Special Report 61E, 1962. The PSR values range from 0 to 5.0. 5.0 denotes new pavements in excellent condition while 0.1 denotes pavements in extremely poor condition. Various stages of pavement deterioration are represented by values between these limits. Data are reported as the IRI in inches per mile. Reference: World Bank Technical Paper Number 46, 1986.

Lower IRI represents smoother riding roadways. See the "Roadway Extern. Characteristics and Performance" test at the front of the mileage tables.
2 Some States did not report for all required mileage. Includes unpaved mileage not represented in the remaining columns: rural Minor Arterial - 639 miles in Alaska, 34 miles in Montana, 56 miles in Oregon; rural Other Principal Arterial - 48 miles in Mississippi; urban Other Principal Arterial - 2 miles in Georgia, 121 miles in Missouri, 1 mile in North Dakota.
3 1993 data used (1994 base data not available). For Nebraska, the 1993 base data were factored to 1994 levels by FHWA.
4 Totals only reflect those States reporting usable or partially usable data.
