

Instructions for Installing the AASHTO PP65 Program

Standard Practice for Determining the Reactivity of Concrete Aggregates and Selecting Appropriate Measures for Preventing Deleterious Expansion in New Concrete Construction

Requirements:

- You must have Microsoft .NET Framework 4 installed. A free download is available from Microsoft:
<http://www.microsoft.com/en-us/download/details.aspx?id=17851>

To Install the Standard Practice program:

1. Download and save the Standard Practice zip file to your computer (Desktop, Documents, Program Files, or another location). If possible, it is recommended you install somewhere on the C drive of the computer.
2. Unzip the file. (Use WinZip or an equivalent program to extract the files; don't just open it.)
3. Once the files are extracted, there should be two files called "setup.exe" and "Standard Practice.application". There should also be a directory called "Application Files", containing one more directory with "Standard Practice.application", "Standard Practice.exe.deploy", and "Standard Practice.exe.manifest".
4. In the main directory, run setup.exe.
5. You may get several warnings about an unverified publisher, but continue with the installation.
6. The program title is "Standard Practice." If it does not automatically launch, run the Standard Practice application from the Windows Start menu.

Troubleshooting the AASHTO PP65 Standard Practice Program

You may receive one of the following error messages during installation:

“Cannot Start Application. You cannot start application Standard Practice from this location because it is already installed from a different location.”

If you receive this warning, a version of the program is already installed. Click OK and follow these steps to uninstall the existing version, depending on your operating system. Then follow the installation instructions above.

Windows 7

1. In Windows, go to the *Control Panel*.
2. Open *Programs and Features*.
3. Select *Standard Practice* from the list of programs.
4. Click *Uninstall/Change*.
5. Select *Remove the application from this computer*.
6. Click *OK* to confirm you would like to remove the application from this computer.

Windows Vista

1. In Windows, go to the *Control Panel*.
2. Open *Programs and Features*.
3. Under *Uninstall or change a program*, locate and select *Standard Practice*.
4. Click *Uninstall/Change*.
5. Click *OK* to confirm you would like to remove the application from this computer.

Windows XP

1. In Windows, go to the *Control Panel*.
2. Double click *Add or Remove Programs*.
3. Under *Currently installed programs*, locate and select *Standard Practice*.
4. Click *Remove*.
5. Click *Yes* to confirm you would like to remove the application from this computer.

“System Update Required. Unable to install or run this application. This application requires Version 4.0 Full or other compatible .NET Framework. Please contact your system administrator.”

If you receive this warning, you do not have the required software components. Please install Microsoft .NET Framework 4 (<http://www.microsoft.com/en-us/download/details.aspx?id=17851>).
