(1) This table is one of a series giving an analysis of motor-fuel consumption, based on reports from State motor-fuel tax agencies. Gasohol is included with gasoline and Alternative Fuels are included with Diesel. In order to make the data uniform and complete, public use and non-highway use were estimated by the Federal Highway Administration. These estimates may not be comparable to data for prior years due to 2025 Nonhighway Model revised estimation procedures. The resulting volumes differ in many cases from the unadjusted data reported in table MF-2. For some States, data is not comparable to prior years due to changes in data analysis and/or improvements in reporting procedures. All data is subject to review and revision.

(2) Some States make a flat percentage allowance for losses in storage and handling, and others allow for actual losses not to exceed a specified percentage. Still others permit distributors to claim stock losses in reconciliations of inventories, thus exempting the lost volume from taxation. Losses by destruction, where reported separately, are also included in this column. The maximum allowance used in the analysis to cover losses in storage and handling was one percent. Because of accounting methods, losses can be reported as a net gain.
